

Proclamation 2024: Report of New Content Addendum

This report contains the new content that was reviewed and approved by the state review panels. This is an addendum to the Proclamation 2024: Report of New Content presented to the State Board of Education at the September 2023 meeting and contains additional changes reported by publishers through October 24, 2023. The new content will be included in the final versions provided to schools as a condition of adoption by the State Board of Education.

Updated Text: 8. Tell students that you need their help to describe what safety precautions they need to take while outside on their nature walk. Students will have different answers, but make sure at least one of them states that because some plants may be poisonous, allergenic, or have thorns they shouldn't touch plants without direction from their teacher. No one should put anything in their mouth while outside.

Updated Text: 3. Discuss with students the safety precautions they should take when going outside. When we are on our walkabout playing I Spy, what safety practices should we follow? Answers will vary. 1) We should not run, especially inside because we could hurt ourselves or someone else. 2) We should listen to our teacher because he/she will give directions to keep us safe. 3) We should not pick up things. We should just look with our eyes because we could get insect bites if we are not careful. 4) We should not throw anything we see outside especially rocks or soil because it could get into someones eyes or hurt them. 4. Once students get outside, have them demonstrate the safety precautions mentioned in the classroom. They should demonstrate walking with their hands and feet to themselves. Especially when someone says, "I spy with my little eye something that uses rocks/soil." a. Ask: Who can demonstrate, or act out, the appropriate way to use safe practices during this walkabout to play "I Spy" both in and out of the school. (Choose a set of partners to demonstrate.)

Updated Text: Making Connections

Phenomena

Students engage with the phenomenon of plants and animals on a nature walk through Story Cards for this lesson. After being read the Story Cards students engage in a nature walk to look for and draw some plants and animals they observed. Next students choose one plant or animal they saw and will record one thing it needs to survive. After students complete the activities, ask students how the activities relate to the phenomenon of plants and animals observed on a nature walk that was shared with them in the Story Cards. Encourage students to ask questions and communicate what they observed about plants and animals.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Updated Text:

Beginner

Students sit with partners. They share a book that includes simple vocabulary and concepts. Students take turns reading aloud a paragraph or page from the book. After one student reads, the other student summarizes what was read. Then, the student who summarized reads a paragraph or page from the book, and the other student summarizes what was read. The students continue to take turns reading and summarizing.

Intermediate

Students sit with partners and share a book. Students take turns reading aloud a paragraph or page from the book. After one student reads, they ask the other student a question about what was read. After the student answers, that student then reads a paragraph or page and asks a question. The complexity of the questioning will vary based on students' command of the language. Students continue to take turns reading and asking questions.

Advanced/Advanced High

Students sit with partners and share a more complex book. Students take turns reading a page from the book. After one student reads the page, the other student summarizes what was read. Then, the student that read asks their partner a question about what he read. After the student answers the question, they read the next page. Students continue to take turns reading. The complexity of the summarization and questioning depends on students' command of the language.

Updated Text: Discussion Questions: • How do you think people felt when they first saw a light bulb? People probably felt amazed and excited! They could now see easily when it was dark, without having to worry about candles or lamps. • Can you imagine what it would be like to only have candles to see in the dark? How would it be different from using light bulbs? Without light bulbs, it might be a little scary and difficult to see everything clearly at night. Plus, we would have to be careful not to knock over the candles and cause a fire. With light bulbs, we can just flip a switch and have light instantly! • What are some other things that use light bulbs to work? Lots of things use light bulbs! Some examples are flashlights, car headlights, refrigerator lights, and even some toys and decorations!

Updated Text: Spiral Opportunity

The following STEMscopes content is covered within this grade level. It can be used to provide additional practice that supports mastery and retention of current science concepts while spiraling in previous concepts.

Suggestion is to utilize the Science Center in Properties of Objects along with the Science Center in Magnets. This will reinforce the concept of physical properties and identifying similarities and differences between different objects.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Updated Text:
Proficiency Level

ELPS: Listening

c2E: use visual, contextual, and linguistic support to enhance and confirm understanding of increasingly complex and elaborated spoken language

Strategy: Oral Scaffolding

From Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education)

Beginner

The teacher provides word cards, with a specific word written on each card that is part of the simpler vocabulary of the concept students are studying. The teacher pronounces the word, explains its meaning, and uses it in a sentence. The student then pronounces the word and uses the word to complete a sentence stem (“_____ means...” or “I think _____ is...”).

Intermediate

The teacher provides word cards, with a specific word written on each card that is part of the academic vocabulary students are studying. The teacher pronounces the word and uses the word in a sentence pertaining to the concept students are studying. The student then pronounces the word and uses it in a different sentence. Complexity of the sentences will vary depending on students’ command of the language.

Advanced/Advanced High

The teacher provides students with a short list of more complex words pertaining to the concept they are studying. Each student chooses a word from the list, pronounces it, and gives the meaning of the word. Teacher support is given if needed. Then, the student writes and reads a sentence using the word as it is used in the academic concept. Complexity of the sentences will vary depending on students’ command of the language.

Updated Text: 3. Lead a discussion with students on how we can describe the stars. We often use words or phrases like bright, twinkling, flashing, sparkling, or tiny, white lights that are only seen at night to describe stars. Tell students stars are always in the sky, but we can usually only see them at night. During the day, the Sun is too bright for us to see the other stars, but at night, when there is no sunlight, we can see the other stars. Students may be interested to learn that our Sun is a star that is close to us! Our Sun would look just like the other stars that they see in the night sky if we were

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

able to look at it from far away.

5. Stop the video periodically, and ask students the following questions: • Describe the stars you see in the video. Answers may vary. Possible student responses could include the following: Some stars are bigger than other stars. Some stars are brighter than other stars. The stars are moving.

Updated Text: 2. Discuss: a. What has Eli learned about what living things need and want? (He has learned that all living things have basic needs they need to survive. He has learned the differences between needs and wants of living things. For example, animals need food and water, but they don't need a toy.) b. What is the problem that Eli, Hanan, and Quincy are trying to solve? (They are trying to find the best animal or plant for Eli to take care of and have as a "pet.") c. What do you think would be a good solution for Eli? Why? (Answers will vary. Sample student answer: I think a plant would be good because they are easy to take care of.)

Updated Text: 6. Tell students they will be going outside to observe (look at) the clouds in the day sky. Ask the following safety questions: a. When we go outside to observe the Sun, what safe practices should you follow? Can you describe them and explain why they are important? (Answers will vary but the following answers should be included, even if prompting is necessary. 1) We should not look directly at the Sun because it can hurt or damage our eyes. Instead, we could wear hats and special sunglasses that block harmful Sun rays. 2) We should listen to our teacher so he/she can make sure we stay safe during the activity.) b. Instruct students to Take a moment with a partner and practice how you will follow safe practices to protect your eyes while observing clouds. c. Observe that students shield their eyes, wear a hat, put on sunglasses, or look away from the direct Sun.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Updated Text: Before students go outside to observe the Sun, ask them to identify safety hazards involved with that activity and to describe why they should not look directly at the Sun. Lead them to understand that looking directly at the Sun can cause damage to their eyes. Ask them what they could wear or use that might offer eye protection. Allow students time to rehearse safe practices before going outside to observe clouds on a sunny day.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Original Text: New Content

Updated Text: Students will work in pairs to create a model showing the changes in a plant life cycle. They will describe how conditions such as sunlight, water, and air can cause the plant to either change or stay the same. Students share their models with another group and identify the basic advantages and limitations of their models. Students will provide feedback to each other and revise their models based on their discussion.

Original Text: New Content

Updated Text: How can we construct a model that represents the patterns we observe in the sky?

- Students will construct a model of the sky during the day or night.
- Students think about whether they create a model of daytime or nighttime.
- Give students time to work and construct their designs. Students share their models and ask questions based on their observations to provide feedback to their peers.
- Students identify and discuss the advantages and disadvantages of using a model to learn science.
- Students revise their own models based on new learning and feedback.

Current Page Number(s): 131-132

Location: Investigating Constellations

Original Text: Review the data collection chart. Tell students that they will work independently to create a constellation. Describe each part of the activity to students. You may find the following tips helpful prior to the investigation:

- Discuss the parts with the students before they begin.
- Ask a few students to summarize the instructions in their own words for the class.
- Set a time limit for the parts.
- Review procedures for cleanup prior to the investigation.
- Review how students should collect data during the activity.

Allow students to follow the steps below to carry out the investigation activity. Consider having students work in pairs, each making their own telescope. Consider supporting students by providing help constructing telescopes or pairing early finishers with students who need assistance.

Part 1

Choose a constellation.

Updated Text: Review the data collection chart. Tell students that they will work like an engineer to design and create a model of a telescope to view a constellation. Describe each part of the activity to students. You may find the following tips helpful prior to the investigation:

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

- Discuss the parts with the students before they begin.
- Ask a few students to summarize the instructions in their own words for the class.
- Set a time limit for the parts.
- Review procedures for cleanup prior to the investigation.
- Review how students should collect data during the activity.
- Encourage students to be creative as they imagine, plan, create, and improve their models.

Allow students to follow the steps to carry out the investigation activity. Once they finish, allow them to test their model and determine how they might improve it. Consider having students work in pairs, each making their own telescope. Support students by helping construct their telescopes or pairing early finishers with students who need assistance. Consider supplying students with additional resources from around the classroom that they can use to improve their models, such as paper clips or paper. Be sure to distribute any extra materials to the students.

Part 1

1. Choose a constellation.
2. Gather materials.
3. Discuss how to use the materials to design a model telescope.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Updated Text: Investigating Constellations

Part 4

1. Discuss a way to improve your model.
2. Draw your improvements.
3. Gather materials to improve your model.
4. Test your model.
5. Discuss if your improvements make a difference.

Have students use any extra materials to work like an engineer and improve their models. They will use the engineering process to plan, improve, and test their models. Allow them to share their improvements and discuss whether they made a difference or not.

Ask the following probing questions as you circulate to assess and scaffold student thinking:

ASK

- Was your prediction correct or incorrect? Student responses will vary. Sample response: My prediction was correct.
- How can telescopes help us view constellations? Sample response: They can make the constellations look bigger and closer.
- How did you work as an engineer? Sample response: We found ways to make our models better.

After students have collected their data, direct them to clean up their materials.

MISCONCEPTIONS

Some students may have the misconception that telescopes are fixed on only one object or another because their model telescope showed just one constellation in it. Refer to the interactive to show how people can use the telescope to look at different objects. Students should realize that any object that users look at with magnification tools will be magnified.

ASK

- How did the telescope help you see your constellation? Student responses will vary. Sample response: It made it appear closer and larger.
- What else could astronomers see more clearly with telescopes? Sample response: planets, stars, comets

DIFFERENTIATION

English Language Learners This activity is about analyzing and recreating a constellation. Provide students with sentence frames that they can use to verbally communicate why magnification tools help to see constellations. Without telescopes, we can see the ___ of the stars that make up the constellation. (pattern) Telescopes make the individual stars in the constellation look ___, ___, and ___. (bigger, closer, clearer)

type of string.

- How well did your solution meet the problem? Sample response: Our solution worked well. We could hear each other through the cups. Sometimes, it was not very clear.
- How would you improve your design if you had to do it again? Sample response: I would try using different types of strings to see if our device improves.

Encourage student groups to share their ideas with students from other classes during lunchtime or after school. Students should also be encouraged to share what they learned in today's activity with their caregiver or other family members. This provides students with an opportunity to communicate the problem and their solution(s) with individuals outside of their classroom.

Original Text: Review the data collection chart. Tell students that they will work independently to create a constellation. Describe each part of the activity to students. You may find the following tips helpful prior to the investigation:

- Discuss the parts with the students before they begin.
- Ask a few students to summarize the instructions in their own words for the class.
- Set a time limit for the parts.
- Review procedures for cleanup prior to the investigation.
- Review how students should collect data during the activity.

Allow students to follow the steps to carry out the investigation activity. Consider having students work in pairs, each making their own telescope. Consider supporting students by providing help constructing telescopes or pairing early finishers with students who need assistance.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Part 1

Choose a constellation.

Updated Text: Review the data collection chart. Tell students that they will work like an engineer to design and create a model of a telescope to view a constellation. Describe each part of the activity to students. You may find the following tips helpful prior to the investigation:

- Discuss the parts with the students before they begin.
- Ask a few students to summarize the instructions in their own words for the class.
- Set a time limit for the parts.
- Review procedures for cleanup prior to the investigation.
- Review how students should collect data during the activity.
- Encourage students to be creative as they imagine, plan, create, and improve their models.

Allow students to follow the steps to carry out the investigation activity. Once they finish, allow them to test their model and determine how they might improve it. Consider having students work in pairs, each making their own telescope. Support students by helping construct their telescopes or pairing early finishers with students who need assistance. Consider supplying students with additional resources from around the classroom that they can use to improve their models, such as paper clips or paper. Be sure to distribute any extra materials to the students.

Part 1

1. Choose a constellation.
2. Gather materials.
3. Discuss how to use the materials to design a model telescope.

Updated Text: [head] "Plan an Investigation

Plan a descriptive investigation of a clay ball roller coaster. You will need to push or pull the ball three times as it moves.

Draw a track for the ball. When your teacher approves your plan, conduct your investigation. How strong do your pushes or pulls need to be for the ball to keep moving? What happens if you push it too hard? What happens if you push the ball too softly?"

Page 69 of 362

Proficiency Level

ELPS: Listening

demonstrate listening comprehension of increasingly complex spoken English by following directions, retelling or summarizing spoken messages, responding to questions and requests, collaborating with peers, and taking notes commensurate with content and grade-level needs

Strategy: Reader/Writer/ Speaker Response Triads

Students will work to gain understanding of a text in cooperative groups of three. Student One will read the text to the others. Student Two will record the group's response to the question. Student Three will report the recorded response back to the group. Students will switch roles after reporting.

From Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education)

Beginner

The teacher should group students in a way that provides them with a sense of security for reading and speaking. This likely means the teacher will need to group beginners with students that the beginners feel comfortable speaking with and who will be supportive. The teacher should spend time with the group ensuring they are able to complete the task.

Intermediate

The teacher should spread intermediate students among groups where the students are both supported and challenged to speak and answer questions. An intermediate student is good support for a beginner but might also need the support of an advanced learner.

Advanced/Advanced High

The teacher should consider grouping some advanced students with beginner and intermediate students who need language support and some with native English speakers to ensure they are working toward a higher level.

For more information about implementing language acquisition strategies and incorporating the ELPS, check out the Teacher Resources.

Updated Text: English Language Support Strategies

Proficiency Level

ELPS: Speaking

expand and internalize initial English vocabulary by learning and using high-frequency English words necessary for identifying and describing people, places, and objects, by retelling simple stories and basic information represented or supported by pictures, and by learning and using routine language needed for classroom communication

Strategy: Partner Reading

From *Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners* by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education)

Beginner

Students sit with partners. They share a book that includes simple vocabulary and concepts. Students take turns reading aloud a paragraph or page from the book. After one student reads, the other student summarizes what was read. Then, the student who summarized reads a paragraph or page from the book, and the other student summarizes what was read. The students continue to take turns reading and summarizing.

Intermediate

Students sit with partners and share a book. Students take turns reading aloud a paragraph or page from the book. After one student reads, they ask the other student a question about what was read. After the student answers, that student then reads a paragraph or page and asks a question. The complexity of the questioning will vary based on students' command of the language. Students continue to take turns reading and asking questions.

Advanced/Advanced High

Students sit with partners and share a more complex book. Students take turns reading a page from the book. After one student reads the page, the other student summarizes what was read. Then, the student that read asks their partner a question about what he read. After the student answers the question, they read the next page. Students continue to take turns reading. The complexity of the summarization and questioning depends on students' command of the language.

For more information about implementing language acquisition strategies and incorporating the ELPS, check out the Teacher Resources.

Updated Text: English Language Support Strategies Proficiency Level ELPS: Reading c4F: use visual and contextual support and support from peers and teachers to read grade-appropriate content area text, enhance and confirm understanding, and develop vocabulary, grasp of language structures, and background knowledge needed to comprehend increasingly challenging language Strategy: Sentence Sort From Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education) Beginner The teacher gives students illustrated sentence strips from simple text in a book or any other source that can be sorted by their characteristics. An example might be simple questions and simple statements. Intermediate Students, with the teacher's assistance, generate categories to sort sentences according to their characteristics. Sentences can be taken from the text in a book or any other source. Examples might be descriptive sentences and nondescriptive sentences or formal and informal English. Advanced/Advanced High Students generate categories in which the learners sort sentences according to their characteristics. Sentences can be taken from the text in a book or any other source. Examples might be sentences connecting/comparing/opposing ideas or correct/incorrect usage. For more information about implementing language acquisition strategies and incorporating the ELPS, check out the Teacher Resources.

Updated Text: We will be going outside to set up our class weather station. Before we go outside, ask the following question.

Can you identify and describe some safe practices we should follow during this field investigation and explain why it is important for us to follow them? Answers will vary but should include practices such as the following:

We should not look directly at the Sun because it can hurt our eyes.

We should pay attention to the terrain we are walking on in case it is wet and slippery or there are rocks in the way so nobody slips or trips and falls or twists their ankle.

We should be observant of bees or ants or other insects so no one gets stung or bit while we are outside.

We should listen to our teacher because he or she will give us directions that will help us learn and also keep us safe.

Proficiency Level

ELPS: Writing

internalize new basic language by using and reusing it in meaningful ways in writing activities that build concept and language attainment

Strategy: Free Write

Provide students with a 5-to-10-minute block of time to free write. The goal is to write the entire time. For some students, this might mean that they write ""I don't know what to write"" on occasion. English learners may switch between native languages and English to keep writing as well as sketching ideas.

From Navigating the ELPS in the Science Classroom: Using the Standards to Improve Instruction for English Learners by John Seidlitz & Jennifer Jordan-Kaszuba (Seidlitz Education)

Beginner

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Page 76 of 362

Allow beginning students to draw or write in any way they feel comfortable, even if that means writing in their native language. The goal is to ensure they continue to write. Encourage them to use any English words they are comfortable with.

Intermediate

Ask intermediate students to draw and free write and use English predominantly. Tell them that they can write in their native language if they get stuck as long as they keep writing.

Advanced/Advanced High

Encourage advanced students to only write in English. Challenge them to stick to English. If they get stuck, they can draw but should stay in English for the writing.

For more information about implementing language acquisition strategies and incorporating the ELPS, check out the Teacher Resources.

Students answer questions about weather by completing an editable/printable or online quiz. Give students still mastering English time to translate assessments as needed.

Updated Text: WEATHER

Students answer questions about weather by completing an editable/printable or online quiz. Give students still mastering English time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified.

[Box] Targeted Instruction

If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out:

- Use two thermometers to record the temperature outside in a sunny spot and a shady spot. Another option is to measure the temperature in the classroom—try a location close to the window and another location away from the window. Ask How do the temperatures compare? Sample answer: The temperature is higher in the sun and lower in the shade/away from the window.
- Make a simple rain gauge by taping a ruler into a cup and a ruler. Set the rain gauge outside on a rainy day to see how much rain falls.
- Make a wind vane by attaching a paper arrowhead and tail to the ends of straw. Push a pin through the straw into the eraser of an unsharpened pencil. Make sure it spins freely. Use clay to attach the wind vane to an outside location and observe the wind.

Have students compare and describe their weather measurements with weather measurements in another location.

Current Page Number(s): 190

Location: Topic 7 Overview, Preview the Topic

Original Text: In this topic, students learn about organisms. First, in Experience 1, they explore and explain how external structures and functions of animals enable them to survive in their environment. Then, in Experience 2, they explore, illustrate, and compare the life cycles of various organisms.

Updated Text: In this topic, students learn about organisms. First, in Experience 1, they explore and explain how external structures and functions of animals enable them to survive in their environment. Then, in Experience 2, they explore, illustrate, and compare the life cycles of various organisms. As you progress through the topic, connect the activities back to Topic 6, Interactions in Ecosystems. Students can apply what they learned in Topic 6 about how temperature and precipitation can affect animal migration and behavior and plant responses (TEKS 3.12A) to what they learn about life cycles in Topic 7. They can also start to connect what they are learning in Topic 7 about external structures and functions to what they learned in Topic 6 about food chains (TEKS 3.12B) and why organisms are more likely thrive or perish when natural changes occur to an environment (TEKS 3.12C).

Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified. [Box] Targeted Instruction If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out: • Have students work in pairs to tape their thumb to their palm. Have students try to complete simple tasks such as writing with a pencil, tying a shoelace, turning pages of a book, etc. Discuss the function of our thumb and the structure of our hands. Connect this to the STEAM Station. Safety Make sure students do not force their thumbs into a painful position. • Provide a medium-sized container of water. Students will spread their fingers and slide them through the water. Then students should keep their fingers close together and slide through the water again. Notice that when the fingers are closer together, the hand can move more water than when the fingers are separated. Tell students this is similar to how webbed feet help ducks. Safety Wipe up any spills immediately. Ask How do webbed feet help ducks survive in their environment? Sample answer: Webbed feet help ducks glide through the water more easily.

Updated Text: (New Targeted Instruction Box)

If you have students who have not yet met the grade-level mastery of concepts in this Experience, try these out:
(bullet) Have students draw a picture of a living plant or animal. Then students should draw a diagram showing what that plant or animal might look like as a fossil. Encourage students to use the traits of the plant or animal to leave fossil clues.

(bullet) Explain to students that dinosaur eggs and nests can also be fossilized. Ask students what kind of information a scientist might get from finding a fossilized nest of dinosaur eggs. Then ask them what else they think they might find near the nest. Have students draw a diagram to show what they think the nest looked like when the dinosaurs were alive.

PROPERTIES OF MATTER

Students answer questions about properties of matter by completing an editable/printable or online quiz. Give students still mastering English time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which

Updated Text:

If you have students who have not yet met the grade-level mastery of concepts in this Experience, try these out:

Have a student volunteer to blow up a balloon. Pass the blown-up balloon around for observation. Invite students to discuss what is taking up space inside the balloon.

Give students an index cards and paper clips to observe. Have a discussion about the physical properties of the two items. Ask students to predict if the index card or paper clip are magnetic. Have students use a magnet to test if the items are magnetic. Ask students if an index card or a paper clip are light or heavy for their size. Have students test if each item will float or sink in water.

You can also use the activities in "Targeted Instruction" to close any learning gaps identified.

[Box] Targeted Instruction

If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out:

- Invite students to act out forms of energy they have used today. Challenge students to identify the form of energy their classmate is acting out. What evidence are they using for their guess?
- Have students identify objects that have more/less thermal energy in comparison to other objects. For example, an ice cube has less thermal energy than a warm mug of milk.

Original Text: Dear Family Member or Caregiver, I am looking forward to helping my students learn about science. Because I know that you want your student to be successful, I offer these suggestions so that you can help them gain proficiency in science. Look through recently completed lessons and be sure to ask lots of questions. One of the best ways for students to check on their learning is to explain it to someone else. Ask about homework assignments and check that they have completed them. Help your student collect materials and information for school activities. Encourage computer literacy. Advise your student to use computers, tablets, or other devices in school or at the library. If you have a home computer, help your student learn to do research online. In Grade 3, your student will be introduced to topics in physical, earth, and life science. Students will learn about matter, force, motion, and energy. They will explore Earth, space, and patterns on Earth. Finally, students will learn about interactions in ecosystems and organisms. I encourage you

Updated Text: [New box] Targeted Instruction If you have students who have not yet met grade-level mastery of concepts in this Experience, try this out: Demonstrate how to make a new magnet by magnetizing a paper clip. First, gather a strong permanent magnet, paper clips, steel wool (or iron filings), and paper. Then follow this procedure: 1. Make small metal fragments/filings by rubbing steel wool together over a piece of paper. You will use the metal filings to demonstrate that the paper clip is indeed a magnet. Set this aside. 2. Straighten a paper clip. 3. Hold the straightened paper clip in one hand, and hold the permanent magnet in your other hand. Bring one end of the magnet to the paper clip at the point where you are holding it, and then slide the magnet away from you along the paper clip. Be sure to only move the magnet along the paper clip in one direction, away from your hand. 4. Repeat this several times. 5. Put away the permanent magnet. 6. Retrieve the metal filings that are on the paper. 7. Hold an unmagnetized paper clip near the filings. (Nothing should happen.) 8. Hold the magnetized paper clip near the filings. The filings will be attracted to the paper clip and attach.

Updated Text: [New box]

(head)Targeted Instruction

(body copy)If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out: Instruct students to form a circle. Assign one student to model the battery (energy source) and give that student dozens of pennies. Assign another student halfway around the circle from the "battery" student to model the light bulb. The "battery" student passes a penny to the student on one side and continues to supply a penny until the pennies have made a complete trip around the circle. Continue passing the original pennies. The "light bulb" student can stand up once they start receiving pennies to indicate that they have electrical energy to light up. Have students describe how this activity models what happens with electrical energy in a circuit.

Turn on a bright lamp. Ask a student to hold their hand near the lamp but not touching. Ask the student to share observations of what they feel. The student will report their observations to the class. This activity demonstrates that electrical energy produces thermal energy because the bulb feels warm.

(body copy)If you have students who have not yet met grade-level mastery of concepts in this Experience, try this out: Use a small flashlight, a marker, a pencil, and graph paper to model and demonstrate changes in light intensity.

Tape the flashlight about 2 inches from the tip of the pencil. Turn on the flashlight and place the pencil perpendicular to the graph paper. Trace the circle of light that forms with the marker.

Shift the pencil to a 45° angle and trace the new shape the light makes. You will notice that the same amount of light now spreads over a larger area. This means the light is less intense.

Original Text: New Content

Updated Text: GUIDE STUDENT THINKING Remind students that synthesizing information helps them create new understandings about the topic. Have students first summarize the information they learn from the Read About It text and images.

Then have them connect that information to what they learned in the Hands-On

Station. If students need additional support, use this scaffolding and guidance for just-in-time learning acceleration. Ask:

- What new information about the moon's phases did you read about?
- How does that information connect to the Hands-On Station?
- What new understanding do you have about the phases of the moon?

(head)Targeted Instruction

(body copy)If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out: Share with students a food chain of what you ate for breakfast or lunch. Alternatively, ask for student volunteers to share. The food chain can have multiple links, depending on whether meat is involved. For example, a food chain for a breakfast of scrambled eggs could look like this: seeds → chicken (eggs) → person

- Have students stand in an arrangement that models a food web. Have four to five students act as the producers. Hand small objects that represent energy from sunlight to the producers. Have the producers hand their objects to the first level of consumers. Then have students continue to pass the energy to higher and higher levels of consumers.

(body copy)If you have students who have not yet met grade-level mastery of concepts in this Experience, try this out: Use a rope to make waves. Place the rope stretched out on a table surface or floor and have one student hold each end of the rope. One student should move the end of their rope back and forth until a wave is created and moves along the rope. The student moving the end should vary how fast and how far they move the rope. Energy transfer is visible through the wave motion of the rope—the energy from the student’s moving hand transfers along the rope to the other end. Ask students how the waves changed when they varied how fast and how far they moved the end of the rope. Students should see the relationship between the amount of energy input and the size of the waves and how fast they move back and forth.

Model wind deposition by making a sand dune. You will need a large plastic bin containing about 2 inches of sand, a small rock, and a hair dryer. Carefully blow on the sand with the dryer to form a dune around the rock.

An alternative is to use the bottom of a cardboard box or even a rectangular baking pan, and to use a drinking straw instead of the dryer to blow on the sand. You will want to use less sand for this than with the plastic bin.

Students answer questions about natural resources and conservation by completing an editable/printable quiz. Give students still mastering English extra time to translate assessments as needed.

Updated Text: Quiz NATURAL RESOURCES AND CONSERVATION Students answer questions about natural resources and conservation by completing an editable/printable quiz. Give students still mastering English extra time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified.

Component: *Grade 4 Teacher Guide*

ISBN: 9781323223352

Updated Text: "Scientific discoveries made by scientists long ago impact science today. More than 400 years ago, scientists found that glass could be shaped to magnify small things or make distant objects appear much closer. The discovery of this property of glass allowed scientists to make additional scientific discoveries. For example, using these lenses they made microscopes that could be used to see forms of life they never knew existed. Another use of these lenses allowed people to see the moon and planets in the solar system much more closely. One of the first things they could see was that Jupiter had moons just like Earth has a moon. Through time scientists have improved the technology of making lenses and mirrors that allow us to see very small objects and very distant objects. New telescopes use these discoveries and improvements to look farther away than has ever been possible.

Explain how science has been impacted by the discovery of making lenses."

Updated Text: "Scientific discoveries made by scientists long ago impact science today. More than 400 years ago, scientists found that glass could be shaped to magnify small things or make distant objects appear much closer. The discovery of this property of glass allowed scientists to make additional scientific discoveries. For example, using these lenses they made microscopes that could be used to see forms of life they never knew existed. Another use of these lenses allowed people to see the moon and planets in the solar system much more closely. One of the first things they could see was that Jupiter had moons just like Earth has a moon. Through time scientists have improved the technology of making lenses and mirrors that allow us to see very small objects and very distant objects. New telescopes use these discoveries and improvements to look farther away than has ever been possible."

Short answer interactivity:

Prompt: "Explain how science has been impacted by the discovery of making lenses."

Sample Answer: "Making lenses let scientists see things that they could never see before. This led to discoveries of very tiny living things. It also allowed scientists to observe and study the Solar System and add to our knowledge of the universe. Improvements on those lens systems is allowing us to see farther into space than we ever have before where we can likely make new discoveries."

Updated Text: Image of Marshall Watson

"Marshall Watson, PhD is a petroleum engineer. Petroleum engineers find ways to extract petroleum, including oil and gas, from different sources. Petroleum engineers must be knowledgeable in many fields of science, and experts in properties of matter, properties of rock, as well as energy transformations. To successfully extract oil, petroleum engineers know that oil has a different relative density than water, so it floats. They know that liquids can move between layers of rocks also. This knowledge is used to design and improve technology to find fossil fuels.

Watson began his career in 1981 as a reservoir engineering expert. Reservoir engineering is the part of petroleum engineering that focuses on how to extract the petroleum without losing any to the surrounding rocks. Watson's work took him all over the United States planning new extraction sites and improving efficiencies at existing locations. After a 30-year career in the field, Watson returned to college. He received his doctorate in petroleum engineering from Texas Tech in 2008. Now, Watson uses his extensive knowledge to help other petroleum engineers. He holds two patents for inventions that help drill new sources of natural gas. His horizontal drilling invention uses high-powered water jets and allows petroleum companies to reach sources of energy that a traditional vertical drilling method alone cannot. His hydraulic fracturing invention also uses water. The water breaks up underground rock so that the petroleum can be reached. Each of these inventions built upon previous scientific work to reach deeper and more challenging pockets of petroleum.

Since 2013, Watson has been a professor at Texas Tech. He is the chair of the Bob L. Herd Department of Petroleum Engineering. He is the past president of the Society of Petroleum Evaluation Engineers where he mentored others. Under Watson's leadership, the Texas Tech's East Campus Oilfield Technology Center has grown to the premier petroleum research location in the country. In 2023, they expanded their facility to include a complete working oil rig that students can use to learn. Students are able to model changes to the systems to make it more efficient and potentially cheaper too."

*updated since previous report

Page 146 of 362

Updated Text: Image of Steven Chu

"Steven Chu, PhD is a physicist. A physicist is a scientist who studies matter, energy, and motion. Physicists also study how these forces can be used to support the things we do and need in everyday life, such as energy. Physicists analyze and collect data, perform studies, and run simulations to better understand how things in life work.

Chu received his doctorate in physics from the University of California–Berkeley in 1976. Chu and his colleagues studied how tiny particles can be cooled and trapped with lasers. He won the Nobel Prize in Physics in 1997 for this discovery. Chu served as the 12th United States Secretary of Energy from 2009 to 2013. Chu was the first Asian American to hold this position. The U.S. Secretary of Energy is the head of the Department of Energy for the country.

Chu wants to see more research on science that our rapidly changing society can benefit from, such as renewable energy, nuclear power, and even alternative building materials. Energy storage costs and development are very high, so research and investment are needed to make renewable or nuclear energy sources more affordable for all countries. He advocates for smart building solutions, like using more wood in structures. Buildings made from wood are strong and safe, and wood is quicker to be replenished than traditional building materials.

Chu uses the example of improvements of batteries over time. Have you ever tried to use a very old battery in a portable gaming device? Chances are it only worked for a few minutes before the screen turned off! Batteries from even 10 years ago are not able to power an advanced electronic toy from today for very long. The earlier batteries used less efficient materials and were more expensive to make. Scientists made incremental improvements, testing new materials, such as lithium, building upon the research of others. Now, batteries are more reliable and cheaper for everyone."

Original Text: New Content

Updated Text: "Support for Student Answers

What kinds of things would a petroleum engineer study? B. ways to reach a natural gas reserve deep underground, C. the best location for an oil platform in the ocean

What kinds of things would a physicist study? A. energy transformations at an amusement park, D. the tiniest particles of matter

Support for Student Answers

How do scientific discoveries, such as improvements in energy technology, impact science? Provide evidence in your answer. Sample answer: Science builds upon discoveries. My evidence is the improvements of batteries over time. Scientists made incremental improvements, and the batteries got smaller, and more powerful.

Students as Scientists

Remind students that thinking through the results of an experiment or investigation is a scientific practice. Based on what they've learned about energy technologies, what might our energy sources and uses be like in the year 2100?"

Updated Text: Quiz ELECTRICAL ENERGY AND CIRCUITS

Students answer questions about electrical energy and circuits by completing an editable/printable or online quiz. Give students mastering English time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified.

Updated Text: Quiz PATTERNS AND SHADOWS

Students answer questions about patterns and shadows by completing an editable/printable or online quiz. Give students mastering English time to translate assessments as needed. If the quiz reveals students have not yet achieved grade-level mastery of the content in this Experience, remember that you can assign assets and activities that support the TEKS on the course to provide intervention. Look especially for "got-more-time" assets, those marked with a plus sign which are designed to personalize learning, such as Topic Readers. You can also use the activities in "Targeted Instruction" to close any learning gaps identified.

(body copy)If you have students who have not yet met grade-level mastery of concepts in this Experience, try these out: Have students point to the direction where the sun can first be seen in the morning (east). Instruct them to trace the position of the sun in the sky throughout the day (students should sweep their arms in an arc from east, overhead, to west).

Use a sticker to mark your location on a globe. Use a flashlight to represent the sun. Spin the globe. Have students focus on the United States. Ask which area of the United States the light touches first (East coast); which area experiences sunrise first (East coast); how you should hold the flashlight to show that it is noon in your location (directly over the sticker); which part of the United States the light touches last (West coast); which area of the United States experiences sunset last (West coast); and what it is like on the East coast when the sun is setting on the West coast (night).

Original Text: New Content

Updated Text: It is extremely important for teachers and caregivers to communicate throughout the school year. Teachers should ensure they approach caregivers in a warm and welcoming manner; inviting them to be a part of their child's education, and showing they are valued. Teachers should communicate with caregivers regularly, not just when there is an issue. They should encourage, and give opportunities for, caregivers to be involved and show thanks for their involvement.

Communication can occur through a variety of mediums, and teachers should be conscious of what method works best for individual caregivers. Teachers are encouraged to speak with caregivers and find out what works for them, whether that be e-mail, messaging boards, class meetings, phone calls etc. Teacher must be aware that caregivers, as with students, are individuals and need to be treated as such.

Teachers are advised to provide digital access to caregivers at the start of each term. It would be beneficial to hold a tutorial meeting in which the teacher can step the caregivers through the program, the digital tools, and the access they will receive to use at home. TPS provides digital access information to teachers for this purpose.

Original Text: New Content

Updated Text: When molten rock cools and hardens deep in the Earth, it can trap (concentrate) minerals like copper, iron, and aluminum. This process creates metallic ore deposits. Metallic ores are important in various industries. For example, copper is used in electrical wiring, iron is used to construct buildings and bridges, and aluminum is used to build airplanes and high-tech devices. Metallic ores are obtained through techniques like underground mining or open-pit mining.

Component: Grade 6 Teacher Guide

ISBN: 9781418398651

Current Page Number(s): 62

Location: Made changes to Launch the Anchoring Phenomenon to address TRR response.

Original Text: Students watch a video that introduces the phenomenon of water being used to lift a person in the air. Throughout the Topic, students will gain knowledge that should help them explain that the hydroflight device exerts a force on the water, and the water exerts an equal but opposite force back on the device.

Updated Text: Students watch a video that introduces the phenomenon of water being used to lift a person in the air. Throughout the Topic, students will identify how forces act on objects. Students will calculate the net force on an object to determine if forces are balanced or unbalanced. Finally, students will identify simultaneous force pairs through Newton's Third Law of Motion that will help them explain that the hydroflight device exerts a force on the water, and the water exerts an equal but opposite force back on the device.

Component: Grade 6 Teacher Guide

ISBN: 9781418398651

Current Page Number(s): 86

Location: Made changes to Entire Page to address TRR response.

Original Text: New Content

Updated Text: Preview the Topic

In this topic, students will use models to compare and contrast forms of energy, analyze how energy is conserved through transformations within a system, and explain how energy is transferred through waves.

Students explored energy transformations and electrical energy in the context of circuits in Grade 5 (5.8B). They will build on that knowledge in this topic as they compare different forms of energy and analyze the concept of energy transformations in greater depth.

Topic Readiness Test

Original Text: Preview the Topic

In Experience 1, students learn about the many scientists who contributed to our understanding of the cell and the development of cell theory. In Experience 2, they discover the characteristics of living things. Students identify unicellular and multicellular organisms, prokaryotes and eukaryotes, and autotrophs and heterotrophs.

Updated Text: Preview the Topic

In this topic, students will relate the impact of scientific thought to the historical development of cell theory and identify patterns when comparing the basic characteristics of organisms. In Experience 1, students learn about the many scientists who contributed to our understanding of the cell and the development of cell theory. In Experience 2, they discover the characteristics of living things. Students identify unicellular and multicellular organisms, prokaryotes and eukaryotes, and autotrophs and heterotrophs.

Students were introduced to some characteristics of living things in Grade 1 (1.12A). They will build on that knowledge in this topic as they further explore the needs and functions of organisms in greater details.

PREVIEW ANCHORING PHENOMENON

Students observe a time-lapse video of a growing crystal. Students will consider

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

what might cause the crystal to grow and ponder the question: If it grows, is it alive?

Topic Readiness

Students answer questions to show what they already know about force and motion by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades.

Teacher Background

To teach the content of this Topic, you should be familiar with these concepts:

- Prior to the invention of the microscope, scientists believed that living things could come from nonliving things, an obsolete theory known as spontaneous generation. The invention of the microscope fostered the development of cell theory, which is made up of three components. Cell theory states that cells are the basic unit of structure and function in all living things, all new cells are made from preexisting cells, and all living things are made of one or more cells.
- Living things grow, develop, and reproduce. Growth of an organism occurs as a result of cell division. Development refers to changes that occur during the life of an organism. Reproduction is the formation of offspring.

Teacher Prep Videos

Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success!

Common Misconceptions

Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.

- **Cells are atoms.** Some students may think that cells and atoms are the same thing. Often, this misconception comes from the identification of the nucleus in both an atom and cell. Explain to students that cells are made up of atoms. While they both have a nucleus, the nucleus of the atom contains protons and neutrons, and the nucleus of the cell contains genetic material. Atoms are also much smaller than cells and can only be seen with very powerful microscopes.
- **Plants are not alive.** Some students may think that plants are nonliving because they are so different from animals. As students discuss plants in this Experience, point out that they exhibit all the characteristics of living things.

Component: *Grade 6 Teacher Guide*

ISBN: 9781418398651

Location: Made changes to Entire Page to address TRR response.

Original Text: New Content

Updated Text: Preview the Topic In this topic students will develop a model to illustrate how Earth's tilt and revolution around the sun causes seasons. Students will identify patterns in order to predict how the position of Earth relative to the Sun and Moon causes tides. Students learned about the force of gravity in Topic 2 (TEKS 6.7A). In this topic, they will build

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

on this understanding to learn how the force of gravity interacts with the Earth-Moon-Sun System. Topic Readiness Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades.

Component: *Grade 6 Teacher Guide*

ISBN: 9781418398651

Current Page Number(s): 252

Location: Added objective for AP to address TRR response. Paragraph under Launch the Anchoring Phenomenon

Original Text: Students watch a time-lapse video that shows a crystal growing from both a naked-eye view and a microscopic view. Throughout the Topic students will gain knowledge that should help them explain that all things that increase in size are not alive. Students will learn the basic components of the cell theory: how organisms are composed of one or more cells; how cells come from existing cells; and how cells are the basic unit of structure and function. They will also learn about the other characteristics that define living things: All living things use and make energy, respond to their environment, grow, develop, and reproduce.

Updated Text: Students watch a time-lapse video that shows a crystal growing from both anaked-eye view and a microscopic view. Throughout the Topic students will gain knowledge that should help them identify and apply patterns to explain that all things that increase in size are not alive. Students will describe the historical development of cell theory: how organisms are composed of one or more cells; how cells come from existing cells; and how cells are the basic unit of structure and function. They will also identify and compare the basic characteristics that define living things: All living things use and make energy, respond to their environment, grow, develop, and reproduce.

Component: *Grade 6 Teacher Guide*

ISBN: 9781418398651

Current Page Number(s): 58

Location: Made changes to Preview the Topic and Topic Readiness heading to address TRR Rubric. Made edits to other areas of the page for fit.

Original Text: New Content

Updated Text: Preview the Topic In this topic, students will use models to identify and explain how forces act on objects, including calculating the net force of an object. Students learned about equal and unequal forces and investigated the effect of forces on objects in a system in Grade 5 (5.7A, 5.7B). They will build on that knowledge in this topic as they explore types of forces and calculate net force. Topic Readiness Test Students answer questions to show what they already know about energy by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades. Teacher Background • Some forces are contact forces (friction and normal forces) which require objects to be in direct contact with each other. Other forces (gravity and magnetism) are noncontact forces and do not require objects to be in direct contact.

Component: *Grade 6 Teacher Guide*

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

In Experience 1, students learn about air as a resource, human activities' adverse effects on air quality, and ways to reduce air pollution. In Experiences 2 and 3, students take a similar approach to learning about water and soil, respectively. In Experience 4, students learn about energy resources, including renewables and nonrenewables, and the management, uses, and interconnections of those resources and the environment.

PREVIEW ANCHORING PHENOMENON

Students consider the example of Bosco Verticale, a pair of apartment buildings that has thousands of small trees that receive filtered wastewater from the building, among other "green" features.

Topic Readiness Test

Students answer questions to show what they already know about managing Earth's resources by completing a printed or online Topic Readiness Test.

Teacher Background

To teach the content of this Topic, you should be familiar with these concepts:

- There are advantages and disadvantages to the use of Earth's renewable and nonrenewable resources.
- Energy resources play a critical role in human society, and management of them impacts both modern life and the environment.
- Solutions to problems such as pollution and limited resources include conservation, recycling, and waste management.

Teacher Prep Videos

Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success!

Common Misconceptions

Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.

- Air pollution is mainly a product of automobile exhaust. While it is true that many automobiles produce air pollution, there are many other sources and types of air pollution.
- Oil and plastic are the worst forms of water pollution. There are other types of water pollution that are very harmful, including nutrients that in lesser amounts are not harmful or may even be beneficial.
- Plants consume soil. Some students think that plants consume soil as they grow. Tell students that plants absorb nutrients that are in the soil. They produce their own food during photosynthesis for energy.
- Petroleum is used only for energy. Many students might be unaware of how prevalent petroleum products are in our lives. Petroleum is used to make nylon clothing, plastic furniture and objects, cosmetics and personal care products, electronics, packaging, and items with lubricated moving parts.

Updated Text: Preview the Topic

In this topic, students will investigate air, water, soil, and energy resources, why resource management is important, and how resources can be managed. In Experience 1, students learn about air as a resource, human activities' adverse effects on air quality, and ways to reduce air pollution. In Experiences 2 and 3, students take a similar approach to learning about water and soil, respectively. In Experience 4, students learn about energy resources, including renewables and nonrenewables, and the management, uses, and interconnections of those resources and the environment. Students were previously introduced to renewable and nonrenewable resources in Grade 4 (4.11A) and Grade 5 (5.11). They will continue to build their understanding as they explore the importance of resource management.

PREVIEW ANCHORING PHENOMENON

Students consider the example of Bosco Verticale, a pair of apartment buildings that has thousands of small trees that receive filtered wastewater from the building, among other "green" features.

Page 186 of 362

Updated Text: It is extremely important for teachers and caregivers to communicate throughout the school year. Teachers should ensure they approach caregivers in a warm and welcoming manner; inviting them to be a part of their child's education, and showing they are valued. Teachers should communicate with caregivers regularly, not just when there is an issue. They should encourage, and give opportunities for, caregivers to be involved and show thanks for their involvement.

Communication can occur through a variety of mediums, and teachers should be conscious of what method works best for individual caregivers. Teachers are encouraged to speak with caregivers and find out what works for them, whether that be e-mail, messaging boards, class meetings, phone calls etc. Teacher must be aware that caregivers, as with students, are individuals and need to be treated as such.

Teachers are advised to provide digital access to caregivers at the start of each term. It would be beneficial to hold a tutorial meeting in which the teacher can step the caregivers through the program, the digital tools, and the access they will receive to use at home. TPS provides digital access information to teachers for this purpose.

Original Text: New Content

Updated Text: Preview the Topic

In Experience 1, students are introduced to asexual reproduction and sexual reproduction of plants and animals. They compare the advantages and disadvantages of both for populations over time. In Experience 2, they are introduced to artificial and natural selection and learn how each can affect populations over generations.

Topic Readiness Test

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Page 191 of 362

Students answer questions to show what they already know about characteristics of organisms and variations by completing a printed or online Topic Readiness Test.

Teacher Background

To teach this topic, you should be familiar with the following concepts:

- Asexual reproduction involves one parent that produces genetically identical offspring. Sexual reproduction involves two parents combining their genetic material to produce offspring that differ from either parent.
- A trait is a specific characteristic, such as eye or hair color, that an organism can pass to its offspring during reproduction through genetic material.
- Artificial selection occurs when humans breed specific organisms with desired traits; these traits do not necessarily make a population better suited to its environment.
- Natural selection is a process by which individuals better suited to their environment survive and reproduce more than other members of their species.

Original Text: Preview the Topic

In Experience 1, students are introduced to the hierarchical organization of cells, tissues, organs, and organ systems. In Experience 2, they become familiar with the structures and functions of the nervous system. In Experience 3, they learn how the endocrine system helps to maintain homeostasis. In Experience 4, they discover how the skeletal and muscular systems work together.

PREVIEW ANCHORING PHENOMENON

Students determine how dancers use the different body systems to dance. Students will consider the interacting systems that enable dancers to perform.

Topic Readiness Test

Students answer questions to show what they already know about the body's systems by completing a printed or online Topic Readiness Test.

Teacher Background

To teach the content of this Topic, you should be familiar with the following concepts:

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

- In multicellular organisms, cells are specialized and organized to perform specific tasks. Cells are organized into tissues, tissues into organs, organs into organ systems, and organ systems into organisms. These levels of organization work to maintain homeostasis, a constant internal equilibrium, despite changes to the external environment.
- The nervous system comprises the central nervous system (brain and spinal cord) and the peripheral nervous system (autonomic and somatic).
- The endocrine system releases hormones, which control various processes throughout the body, including many that control the reproductive system.
- The skeletal and muscular systems are structural systems that shape, move, and protect the body.

Teacher Prep Video

Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success!

Common Misconceptions

Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.

- All cells perform the same function. Cells vary in shape and function.
- Only the brain sends signals that tell the body what to do. In addition to the brain, the spinal cord sends signals to complete an action.
- The endocrine system is the only body system that releases hormones. Organs from other body systems produce and secrete hormones as well.
- All connective tissues are solid. Some connective tissues, like bone, are solid, but connective tissues come in other forms, such as liquids.

Updated Text: Preview the Topic

In this topic, students will describe the hierarchical organization within organisms and identify and model the functions of human body systems. In Experience 1, students are introduced to the hierarchical organization of cells, tissues, organs, and organ systems. In Experience 2, they become familiar with the structures and functions of the nervous system. In Experience 3, they learn how the endocrine system helps to maintain homeostasis. In Experience 4, they discover how the skeletal and muscular systems work together.

(new paragraph)Students were introduced to cells (TEKS 6.13A) and the characteristics of living things in Grade 6 (TEKS 6.13B). They will continue to build their understanding in this topic as they explore the levels of organization and specific human body systems.

PREVIEW ANCHORING PHENOMENON

Students determine how dancers use the different body systems to dance.

Students will consider the interacting systems that enable dancers to perform.

Topic Readiness

Students answer questions to show what they already know about the body's systems by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades.

Teacher Background

Updated Text: Preview the Topic

In this topic, students will analyze the relationship between acceleration, net force, and the mass of an object using Newton's second law of motion. Students will also investigate real-world examples of Newton's laws acting within systems. In Experience 1, students are introduced to acceleration as the change in velocity over the change in time. They also learn that acceleration is proportional to the applied force and inversely proportional to the mass of the object. In Experience 2, they discover Newton's laws of motion and describe how Newton's three laws act simultaneously within systems.

Students learned about Newton's third law of motion in Grade 6 (6.7C). They also analyzed forces using Newton's first law of motion in Grade 7 (7.7D). They will build on that knowledge in this topic as they explore how all three of Newton's Laws act within systems.

PREVIEW ANCHORING PHENOMENON

Students consider the application of acceleration and Newton's laws to safety restraints in a car. They investigate how these restraints keep people safe during a crash.

Topic Readiness Test

Students answer questions to show what they already know about force, motion, and acceleration by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades.

Teacher Background

You should be familiar with the following concepts:

- Acceleration is change in speed over time. Acceleration is expressed as distance/time². It is a vector quantity, having both magnitude and direction.
- Newton's first law of motion relates the motion of an object to any force that acts on it. It is sometimes referred to as the Law of Inertia.
- Newton's second law relates force on an object and the object's mass and acceleration. It can be expressed as $F = ma$.
- Newton's third law states that for every action force, there is an equal and opposite reaction force.

Teacher Prep Videos

Watch the Teacher Prep Videos to help you prepare for each Experience in the program. These include a preview of the Experience as well as classroom management strategies to make every Science Experience a success!

Common Misconceptions

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Common misconceptions (in bold type) and explanations follow. These misconceptions will be addressed at point of use.

- Acceleration is when an object moves faster. Acceleration is a change in speed over time. The change can be positive or negative.
- A motionless object has no forces acting on it. Newton’s first law emphasizes that motion changes when an object is acted on by an external force. An object that is not moving has forces acting on it, but the forces are balanced. A ball sitting still on a table has gravity pulling down on it and the table pushing up on it. These forces are equal, therefore, the ball does not move.

Current Page Number(s): 238

Location: Made changes to Preview the Topic and Topic Readiness heading to address TRR Rubric. Made edits to other areas of the page for fit.

Original Text: New Content

Updated Text: Preview the Topic

In this topic, students will use models to identify the function of organelles and genes. Students will also investigate the relationship between the variation of traits and the likelihood of survival and reproductive success of a species over generations. In Experience 1, students are introduced to the basic functions of cell structures in animal and plant cells and how their functions support the health of an organism. They will discover the function of genes. In Experience 2, they become familiar with how variations of traits lead to adaptations that influence the likelihood of survival and reproductive success of a species over generations.

Students learned about forms of reproduction (7.13C) and how natural and artificial selection can affect populations over generations (7.13D) in grade 7. They will build on that knowledge in this topic as they discover the function of genes and how inheritance of certain traits influences the survival of a species.

PREVIEW ANCHORING PHENOMENON

Students write a claim about how a chuckwalla might be well-suited to live in rocky areas found in desert regions of the southwestern United States and northern Mexico. Students use evidence and reasoning to determine which traits and adaptations are important for the lizard’s survival.

Topic Readiness Test

Students answer questions to show what they already know about variations and an organism’s survival by completing a printed or online Topic Readiness Test. Remediation is provided for students who struggle with prerequisite concepts. You could also use the Look Back Presentation to remind students of content they learned in prior grades.

Teacher Background

To teach this content, you should be familiar with the following concepts:

- Cells are the basic unit of structure and function in all organisms. Cells contain organelles which are cellular structures with their own functions that support the health of the organism. Genes are small segments of chromosomes that determine traits. Genetic information is passed from parent to offspring.
- Variation is a difference in a trait among the members of a species in a population that depends on genetic and environmental factors. An adaptation is a trait or behavior that helps an organism survive and reproduce. Adaptations can be structural, behavioral, or physiological.

Original Text: New Content

Updated Text: Launch the Anchoring Phenomenon

Students watch a video that introduces the phenomenon of a chuckwalla lizard with traits that allow it to survive in a desert environment. Throughout the Topic, students will use models to describe the function of genes and how they determine inherited traits of offspring. Students will investigate the relationship between the variation of traits within a population and adaptations that influence the likelihood of survival and reproductive success of a species, such as chuckwalla lizards, over generations.

Page 229 of 362

Updated Text: (updated text) Identificar partes de un objeto entero Pida a los estudiantes que usen un reloj de pared o un temporizador de cocina que tengan en su hogar para practicar cómo identificar objetos enteros y sus partes. Pídeles que hagan una tabla de dos columnas en sus cuadernos de Ciencias. El encabezado de la primera columna debería llevar el rótulo "Objeto entero". Los estudiantes deberían dibujar el reloj o el temporizador de cocina entero. El encabezado para la otra columna debería llevar el rótulo "Partes". Los estudiantes deben dibujar algunas de las partes del reloj o temporizador, como las manecillas del reloj o el dial del temporizador. Invite a los estudiantes a completar el mismo ejercicio con otros objetos comúnmente hallados en el hogar.

(insert new paragraph) Comparta la carta de la escuela al hogar para este tema con los padres y cuidadores para brindarles la información que apoye el aprendizaje de los estudiantes. Use la Guía de comunicación entre la escuela y el hogar para obtener ideas adicionales sobre traer el aprendizaje en el hogar al salón de clases.

Original Text: New Content

Updated Text: "Los descubrimientos científicos que hicieron los científicos hace mucho tiempo impactan a la ciencia actual. Hace más de 400 años, los científicos descubrieron que el vidrio podía moldearse para amplificar cosas pequeñas o para que los objetos lejanos parecieran más cercanos. El descubrimiento de esta propiedad del vidrio permitió a los científicos hacer descubrimientos científicos adicionales. Por ejemplo, con ese tipo de lentes hicieron microscopios que podían usarse para ver formas de vida que no sabían que existían. Otro uso de esas lentes permitió a las personas ver la luna y los planetas del sistema solar en mayor detalle. Una de las primeras cosas que pudieron ver fue que Júpiter tenía lunas, así como la Tierra tiene una luna. A lo largo del tiempo, los científicos han mejorado la tecnología utilizada para fabricar lentes y espejos que nos permiten ver objetos muy pequeños y objetos muy lejanos. Los nuevos telescopios usan estos descubrimientos y mejoras para mirar más lejos de lo que alguna vez fue posible."

Short answer interactivity:

Prompt: "Explica cómo el descubrimiento de la fabricación de lentes ha impactado a la ciencia."

Sample Answer: "La fabricación de lentes permitió a los científicos ver cosas que antes no podían, lo que llevó a descubrir

Updated Text: Image of Marshall Watson

"El Dr. Marshall Watson es ingeniero en petróleo. Los ingenieros en petróleo buscan maneras de extraer petróleo y gas de diferentes fuentes. Deben conocer muchos campos de la ciencia y ser expertos en las propiedades de la materia, las propiedades de las rocas y las transformaciones de la energía. Para poder extraer petróleo con éxito, los ingenieros en petróleo saben que este tiene una densidad relativa diferente de la del agua, por lo cual flota. También saben que los líquidos pueden moverse entre capas de rocas. Estos conocimientos se aplican para diseñar y mejorar la tecnología que permite hallar combustibles fósiles.

Watson comenzó su carrera en 1981 como experto en ingeniería de yacimientos. La ingeniería de yacimientos es la parte de la ingeniería en petróleo que se enfoca en cómo extraer el petróleo sin que nada se pierda en las rocas de los alrededores. El trabajo de Watson lo llevó a recorrer los Estados Unidos planificando nuevos sitios de extracción y mejorando la eficiencia de los sitios existentes.

Después de 30 años de trabajo de campo, Watson regresó a la universidad. Hizo su doctorado en Ingeniería en petróleo en la Universidad Texas Tech, en 2008. Ahora, Watson usa sus amplios conocimientos para ayudar a otros ingenieros en petróleo. Tiene dos patentes de inventos que sirven para perforar el suelo y hallar nuevas fuentes de gas natural. Su invento de perforación horizontal usa chorros de agua de gran potencia y permite que las empresas petroleras lleguen a fuentes de energía a las que no podrían llegar solamente con un método de perforación vertical tradicional. Su invento de fracturación hidráulica también usa agua. El agua rompe la roca subterránea para que se pueda llegar al petróleo. Cada uno de estos inventos se basó en un trabajo científico previo para llegar a bolsones de petróleo más profundos y más difíciles de acceder.

Desde 2013, Watson es profesor en la Universidad Texas Tech. También es jefe del Departamento de Ingeniería en

Petróleo Bob L. Herd y expresidente de la Sociedad de Ingenieros de Evaluación del Petróleo, donde fue mentor de otros. Bajo el liderazgo de Watson, el Centro Tecnológico del Campo Petrolero, Oilfield Technology Center, que se encuentra en el Campus Este de la Universidad Texas Tech, se convirtió en el principal lugar para la investigación de petróleo del país. En 2023, expandieron las instalaciones para incluir una plataforma petrolífera completa y en funcionamiento que los estudiantes pueden usar para aprender. Los estudiantes pueden hacer modelos de los cambios en los sistemas para que la extracción de petróleo sea más eficiente y potencialmente más barata."

Location: Paragraph 1, image of Steven Chu working, and paragraphs 2–4

Original Text: New Content

Updated Text: Image of Steven Chu

"El Dr. Steven Chu es físico. Los físicos son científicos que estudian la materia, la energía y el movimiento. También estudian cómo pueden usarse estas fuerzas para sustentar cosas que hacemos y necesitamos todos los días, como la energía. Los físicos analizan y reúnen datos, realizan estudios y llevan a cabo simulaciones para comprender mejor cómo funcionan las cosas.

Chu obtuvo su doctorado en Física en la Universidad de California en Berkeley, en 1976. Junto con otros colegas, estudió cómo enfriar y atrapar partículas diminutas con rayos láser. Ganó el Premio Nobel de Física en 1997 por este descubrimiento.

Chu fue el 12.º Secretario de Energía de los Estados Unidos de 2009 a 2013. Fue el primer estadounidense de origen asiático en ocupar ese cargo. El Secretario de Energía de los Estados Unidos es el máximo responsable del Departamento de Energía del país.

Chu desea que se lleven a cabo más investigaciones científicas para el beneficio de nuestra sociedad, que va cambiando rápidamente. Por ejemplo, investigaciones sobre energías renovables, energía nuclear y hasta materiales de construcción alternativos. Los costos de almacenamiento y desarrollo de la energía son muy altos, por lo que se necesita investigar e invertir para que las fuentes de energía renovable o nuclear sean más accesibles para todos los países. Chu está a favor de soluciones de construcción inteligente; por ejemplo, usar más madera al edificar. Las construcciones hechas de madera son resistentes y seguras, y la madera se puede reponer más rápido que los materiales de construcción tradicionales.

Chu usa el ejemplo de las mejoras de las baterías a lo largo del tiempo. ¿Alguna vez intentaste usar una batería muy vieja en una consola de juegos portátil? ¡Lo más probable es que haya funcionado durante unos minutos hasta que la pantalla se apagó! Ni siquiera las baterías de hace 10 años pueden hacer funcionar por mucho tiempo un juguete electrónico avanzado de los que existen hoy en día. Las primeras baterías usaban materiales menos eficientes y era más costoso fabricarlas. A partir de las investigaciones de otras personas, los científicos hicieron mejoras progresivas probando materiales nuevos, como el litio. Ahora, las baterías son más confiables y baratas para todos."

Original Text: New Content

Updated Text: "Apoyo para las respuestas de los estudiantes

¿Qué tipo de cosas estudiaría un ingeniero en petróleo? B. maneras de llegar a una reserva de gas natural en las profundidades del suelo, C. la mejor ubicación para una plataforma petrolífera en el océano

¿Qué tipo de cosas estudiaría un físico? A. transformaciones de la energía en un parque de atracciones, D. las partículas más diminutas de materia

Apoyo para las respuestas de los estudiantes

¿Cómo afectan a la ciencia los descubrimientos científicos, como las mejoras en la tecnología de la energía? Proporciona evidencias en tu respuesta. Ejemplo de respuesta: La ciencia se basa en los descubrimientos. Mis evidencias son las mejoras de las baterías a lo largo del tiempo. Los científicos hicieron descubrimientos progresivos, y las baterías se volvieron más pequeñas y potentes.

Los estudiantes como científicos

Recuerde a los estudiantes que reflexionar sobre los resultados de un experimento o investigación es una práctica científica. Basándose en lo que han aprendido sobre las tecnologías de la energía, ¿cuáles podrían ser nuestras fuentes y usos de energía en el año 2100?"

Original Text: New Content

Updated Text: Image of Marshall Watson

"El Dr. Marshall Watson es ingeniero en petróleo. Los ingenieros en petróleo buscan maneras de extraer petróleo y gas de diferentes fuentes. Deben conocer muchos campos de la ciencia y ser expertos en las propiedades de la materia, las propiedades de las rocas y las transformaciones de la energía. Para poder extraer petróleo con éxito, los ingenieros en petróleo saben que este tiene una densidad relativa diferente de la del agua, por lo cual flota. También saben que los líquidos pueden moverse entre capas de rocas. Estos conocimientos se aplican para diseñar y mejorar la tecnología que permite hallar combustibles fósiles.

Watson comenzó su carrera en 1981 como experto en ingeniería de yacimientos. La ingeniería de yacimientos es la parte de la ingeniería en petróleo que se enfoca en cómo extraer el petróleo sin que nada se pierda en las rocas de los alrededores. El trabajo de Watson lo llevó a recorrer los Estados Unidos planificando nuevos sitios de extracción y mejorando la eficiencia de los sitios existentes."

Image of shale oil rig

"Después de 30 años de trabajo de campo, Watson regresó a la universidad. Hizo su doctorado en Ingeniería en petróleo en la Universidad Texas Tech, en 2008. Ahora, Watson usa sus amplios conocimientos para ayudar a otros ingenieros en petróleo. Tiene dos patentes de inventos que sirven para perforar el suelo y hallar nuevas fuentes de gas natural. Su

invento de perforación horizontal usa chorros de agua de gran potencia y permite que las empresas petroleras lleguen a fuentes de energía a las que no podrían llegar solamente con un método de perforación vertical tradicional. Su invento de fracturación hidráulica también usa agua. El agua rompe la roca subterránea para que se pueda llegar al petróleo. Cada uno de estos inventos se basó en un trabajo científico previo para llegar a bolsones de petróleo más profundos y más difíciles de acceder.

Desde 2013, Watson es profesor en la Universidad Texas Tech. También es jefe del Departamento de Ingeniería en Petróleo Bob L. Herd y expresidente de la Sociedad de Ingenieros de Evaluación del Petróleo, donde fue mentor de otros. Bajo el liderazgo de Watson, el Centro Tecnológico del Campo Petrolero, Oilfield Technology Center, que se encuentra en el Campus Este de la Universidad Texas Tech, se convirtió en el principal lugar para la investigación de petróleo del país. En 2023, expandieron las instalaciones para incluir una plataforma petrolífera completa y en funcionamiento que los estudiantes pueden usar para aprender. Los estudiantes pueden hacer modelos de los cambios en los sistemas para que la extracción de petróleo sea más eficiente y potencialmente más barata."

Current Page Number(s): TEKS Lesson 5.8.A, Day 6, Screen 3

Location: Paragraphs 1–4 and image of Steven Chu working

Original Text: New Content

Updated Text: Image of Steven Chu

"El Dr. Steven Chu es físico. Los físicos son científicos que estudian la materia, la energía y el movimiento. También estudian cómo pueden usarse estas fuerzas para sustentar cosas que hacemos y necesitamos todos los días, como la energía. Los físicos analizan y reúnen datos, realizan estudios y llevan a cabo simulaciones para comprender mejor cómo funcionan las cosas.

Chu obtuvo su doctorado en Física en la Universidad de California en Berkeley, en 1976. Junto con otros colegas, estudió cómo enfriar y atrapar partículas diminutas con rayos láser. Ganó el Premio Nobel de Física en 1997 por este descubrimiento.

Chu fue el 12.º Secretario de Energía de los Estados Unidos de 2009 a 2013. Fue el primer estadounidense de origen asiático en ocupar ese cargo. El Secretario de Energía de los Estados Unidos es el máximo responsable del Departamento de Energía del país."

Image of Chu working

"Chu desea que se lleven a cabo más investigaciones científicas para el beneficio de nuestra sociedad, que va cambiando rápidamente. Por ejemplo, investigaciones sobre energías renovables, energía nuclear y hasta materiales de construcción alternativos. Los costos de almacenamiento y desarrollo de la energía son muy altos, por lo que se necesita investigar e invertir para que las fuentes de energía renovable o nuclear sean más accesibles para todos los países. Chu está a favor de soluciones de construcción inteligente; por ejemplo, usar más madera al edificar. Las construcciones hechas de madera son resistentes y seguras, y la madera se puede reponer más rápido que los materiales de construcción tradicionales.

Chu usa el ejemplo de las mejoras de las baterías a lo largo del tiempo. ¿Alguna vez intentaste usar una batería muy vieja en una consola de juegos portátil? ¡Lo más probable es que haya funcionado durante unos minutos hasta que la pantalla se apagó! Updated Text: "Los descubrimientos científicos que hicieron los científicos hace mucho tiempo impactan a la ciencia actual. Hace más de 400 años, los científicos descubrieron que el vidrio podía moldearse para amplificar cosas pequeñas o para que los objetos lejanos parecieran más cercanos. El descubrimiento de esta propiedad del vidrio permitió a los científicos hacer descubrimientos científicos adicionales. Por ejemplo, con ese tipo de lentes hicieron microscopios que podían usarse para ver formas de vida que no sabían que existían. Otro uso de esas lentes permitió a las personas ver la Proclamation 2024: Report of New Content Addendum (11/08/2023)

luna y los planetas del sistema solar en mayor detalle. Una de las primeras cosas que pudieron ver fue que Júpiter tenía lunas, así como la Tierra tiene una luna. A lo largo del tiempo, los científicos han mejorado la tecnología utilizada para fabricar lentes y espejos que nos permiten ver objetos muy pequeños y objetos muy lejanos. Los nuevos telescopios usan estos descubrimientos y mejoras para mirar más lejos de lo que alguna vez fue posible. Explica cómo el descubrimiento de la fabricación de lentes ha impactado a la ciencia."

Updated Text: Information for Caregivers - Biology for Texas

Dear Parents and Caregivers, Our Biology class will be using BIOZONE's Biology for Texas this year. The purpose of this letter is to provide information about where to access guidance resources to reinforce student learning and development at home.

A strong partnership between home and school is a vital component to supporting learning, and adds value to your learners' progress throughout the course. Caregivers are encouraged to support their learners by being informed of the course material, including components available in the Resource Hub (see below).

Resources for Caregivers - A full digital online flipbook copy of the book can be found in the "Homelink" section of the BIOZONE Resource Hub

Also provided in Homelink is: A downloadable "User Guide for Caregivers". This guide will walk you through the key features of the book and associated components of the learning program. A link to the Texas Essential Knowledge and Skills (TEKS), the official TEA academic standards for this Biology course. A link to the TEA STEM (science, technology, engineering, mathematics) Family Companion Guide (in both English and Spanish) that provides valuable guidance on talking to your teenager about the subject, encouraging engagement, and suggestions for learning outside the classroom. Additional useful links include a parent's guide to success in science, keeping teens engaged in science, and encouraging teen girls to pursue science.

Information about the teaching programme.

Further details about the learning program can be found in the "Teacher Support" section of the Resource Hub. This can be accessed from the tab on the left-hand side of the screen.

Included in the downloadable Biology for Texas Implementation Guide is the:

Scope and Sequence Guide and Pacing Guide, noting that the class will most likely have a modified version to best suit the specific needs of the learners.

Lesson Implementation Guide, that provides extended teaching suggestions corresponding to each activity in the book, including Homelinks, "suggestions where links can be made with the student's home and the appropriate lesson in class.

Please feel free to contact the School or Biology classroom teacher if you would like further information about BIOZONE's Biology for Texas in addition to that provided above.

Original Text: n/a

Updated Text: For digital collaboration in the literature search for activity 28 and the viral disease case study in activity 31, students can use a shared Google Doc or TEAMS WORD Doc to start or continue their research together. The groups then can paste their key points onto one class shared digital document to keep a record of their pooled knowledge. Prior to this, a small activity where groups are placed together to discuss particular roles in the group are decided could be useful. In subsequent group activities, where students are working digitally, the role of leadership can be passed onto other students.

Updated Text: Information for Students - Biology for Texas

Biology students,

Our Biology class will be using BIOZONE's Biology for Texas this year. The purpose of this letter is to provide information about where to access resources to reinforce your learning.

You are encouraged to explore all of the course material, including components available in the Resource Hub that you can use to supplement the worktext, such as videos, interactives, and links (see below for how to access). Additionally, your

paper copy of the worktext has information on how to best use the program, located at the front in the introductory section.

Digital Copy of the Worktext

If you require access to Biology for Texas, but do not have your paper copy, a full digital online flipbook can be found in the "Homelink" section of the BIOZONE Resource Hub. www.biozonehub.com then enter the code TXB1-4054 or scan the QR code.

Additional Resources

Further details about the learning program can be found in the "Teacher Support" section of the Resource Hub. This can be accessed from the tab on the left-hand side of the screen. Included in the downloadable Biology for Texas Implementation Guide is the: • Scope and Sequence Guide and Pacing Guide, noting that your class will likely have a modified version, adapted to best suit the specific needs of your school and Biology class. • Lesson Implementation guide, that provides detailed suggestions and information corresponding to each activity in the worktext, including Homelinks, "suggestions where links can be made with the student's home and the appropriate lesson in class". This information can be used to assist independent learning or at-home learning, and prompt you to give suggestions to the teacher for further Homelinks ideas. • Data Analysis guide, that explains how to download and use the digital STUDENT: Student Progress Tracker to record and monitor your progress against the TEKS informed Learning Outcomes as you work through activities. Printable Student Progress Tracker templates available at the back of the Implementation Guide (IG106-117) can be used as a supplement or alternative to the digital program. These tools allow you to understand which areas will

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

need further revision, or may prompt you to explore extension ideas listed in the Lesson Implementation guide. • Making Connections Templates can be printed out, and used independently in class, for homework, or revision, to identify connections between the concepts and the TEKS covered in the activities. Please feel free to contact your Biology classroom teacher if you would like further information about BIOZONE's Biology for Texas, in addition to that provided above.

This User Guide for Caregivers outlines key features integrated into BIOZONE's Biology for Texas. User Guide For Caregivers ► Multiple opportunities are provided for your child to investigate, apply knowledge, and then to demonstrate mastery across all of the Biology TEKS. ► Engaging, current, and relevant phenomena and case studies are extensively embedded, to develop deeper understanding of the concepts, prompt questioning, and encourage learning. ► The unique format of the worktext, a combined textbook and workbook, allows your child to personalize, respond, and interact directly with the stimulus material. ► The scale of the biology concepts deliberately builds from the small, cellular world, through to the expansive ecological system, allowing for scaffolded knowledge to be built upon, while applying prior knowledge. ► BIOZONE's Biology for Texas is much more than just a book! Some of the features that support your child include: • Curated digital resources, such as 3D models, videos, interactive programs and more, to enhance the learning experience. • Learning outcomes linked to TEKS, allowing for mastery of High School Biology in a way that is logical and accessible • Digital student progress tracking tools, so your child can clearly visualize their progression throughout the course and identify areas needing further revision or coverage. • English Language Proficiency support, including easy-to-follow learning suggestions, and a Spanish- English glossary of important terms. Head to <https://biozone.com/us/texas/> to find out how your son or daughter can begin your journey with this exciting new way of learning.

Updated Text: Unpacking the Activities

The activity pages have been carefully designed to provide high quality information in an easily accessible format. They include a number of features designed to engage, and help your child unpack and understand the information. Features include: ► Short blocks of text so that your child does not feel overwhelmed with too much reading. ► High quality, informative graphics. ► Links to 3D models (following page). These provide another dimension to your child's

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

engagement and learning. ► Question and answer sections allow your child to demonstrate their understanding of the content. By having the stimulus material and their answers in one place, your child can easily revise for assessments. ► The tab system identifies when there is support material on the Resource Hub. Tabs also identify the applicable TEKS (see following page).

Understanding the Tab System

The blue TEKS tabs use picture codes to identify the scientific and engineering practices TEKS relevant to the activity, B.1 - B.4 from left to right, below. These are detailed in the introduction to each chapter, and linked to appropriate activities. The red TEKS tabs indicate the Science Concepts TEKS covered in the activity. These are detailed in the introduction to each chapter. The gray hub tab indicates that the activity has online support via the BIOZONE RESOURCE HUB. This may include videos, animations, articles, 3D models, and computer models. The TEKS code refers specifically to the Science Concept TEKS covered in the activity.

Updated Text: Practical investigations

Throughout Biology for Texas, your child is given opportunities to explore through investigations. These are opportunities for your child to develop competency in laboratory procedures, to practice and refine skills in observation and analysis, and to manipulate data. Some investigations act as stimulus material, while others require your child to take what they

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

have already learned and apply their knowledge to a more complex scenario. Investigations can take several forms, including paper practicals, modeling activities, and wet lab experiments. The investigations provide an excellent opportunity for collaborative work and will stimulate discussion and the sharing of ideas. Students of different abilities may be sometimes paired for investigations, so that confident students can guide and encourage less able students and, in this relaxed environment, striving students will be encouraged to share their own observations and thoughts. Collaboration through paired practical work provides an excellent opportunity for English language learners to interact in meaningful ways to extend their English language and scientific vocabulary.

Hazards and required PPE (where applicable) are clearly identified on the investigation.

Each investigation is clearly numbered sequentially through the chapter. No kits are required for the investigations. The investigations have been designed using everyday materials and equipment easily found in most high school laboratories. A list of the equipment and chemicals required for each investigation is provided in the back of the book to assist with preparation. Many non-laboratory investigations can be adapted so students are able to carry them out at home, if needed. Where applicable, the investigations provide your child, and their teacher, with health and safety information at the start of the investigation. Prior to the investigation, your child's teacher will: ► Ensure the students read through the procedure fully before beginning the investigation. ► Highlight any hazardous steps or important steps where extra care may be required. ► Ensure students have all the equipment assembled and know if there are pinch points in the process. If necessary, have the groups allocate specific people to steps, e.g. timing, collecting samples, recording data or observations etc.

Updated Text: Scaffolding: Teachers may wish to make a differentiated selection of questions, for example just the multi-choice questions, to assign to some groups of students - especially if they have already reached the standard of the TEKS informed Learning Outcomes elsewhere in the chapter. Conversely, students who have yet to reach a sufficient standard of achievement in some TEKS, may use the summative assessment to obtain this standard - and record this in the Student Progress tracker. Teachers may wish to assign a marking schedule to this assessment, where a particular grade (approaching, proficient, mastery) can be awarded based on the proportion of questions that are correct. It is also recommended for assessments, where English is a second language for students, it is an equitable advantage they have digital access to a translation app, such as <https://translate.google.com/> on their devices or a small hand-held digital translator, to allow them the fairest opportunity for success.

Original Text: n/a

Updated Text: To enable digital collaboration in the class, so groups can share and discuss their results, a shared Google Doc or TEAMS WORD Doc can be created. The groups can then paste screenshots of their results onto one class shared digital document. This would also enable students who are working from home, to participate in the whole class activity.

Updated Text: Teacher Notes:

Encourage students to define and clarify the problem based on observations they have made during the school year or by providing a video or images of the city they live in.

Group students and allow them to develop questions based on their observations, facilitate a discussion amongst them to probe students' understanding, and challenge them to identify the core concepts of ecosystem stability.

Brainstorm with students the monitor's design, constraints, challenges, advantages, amount of time needed to build and test and allow them to make a material list of their own.

For any students struggling with construction or looking for additional information, provide time for online research.

Updated Text: Teacher Note:

- Show students an image or video of a normal cell undergoing cell division compared to that of a cancerous cell and allow students to make observations of the concept of disruption of the cell cycle.
- Place students into groups of four and ask them to develop questions based on their observations, challenge them to apply their knowledge of the cell cycle, and answer the questions within the group.
- Once completed, let them calculate the number of cells made in a normal cell cycle compared to that of a cancerous cell.
- This model will allow students to understand the difference in the growth rate of a normal and cancerous cell.

Updated Text: Students can be creative and add images or references from the video that allow them to better remember the difference between the lytic and lysogenic cycles. Pass out at least two sticky notes to each student. Have students add a fact or two they learned from the video on each sticky note.

After students have completed their sticky notes, have them place them on the whiteboard or a piece of chart paper. Conduct a gallery walk so students can see other classmates' facts and drawings.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

After the gallery walk, have students write a summary paragraph in their science notebook.

Original Text: New Content

Updated Text: Students' data will not be the same because they are not measuring specific amounts. To facilitate a discussion of their data, create a data table on a whiteboard or chart paper and have students record their original and final masses. Ask the group to look for patterns and share out. Ask students to identify outliers and to make suggestions for those. Reinforce the value of multiple pieces of evidence when investigating and the importance of reliable and consistent results. Ask students, if they were to repeat this investigation, what are some things they would change.

Updated Text: [head]Topic: The Strong Nuclear Force

A helium-4 nucleus has two protons and two neutrons. Describe the forces between these particles. The strong force acts as an attractive force between each pair of particles and keeps the nucleus from breaking apart. The two protons also exert a repulsive electric force on each other. This electric force is smaller than the strong force, so the nucleons remain together.

Updated Text: Perhaps one of the earliest language action games infants enjoy is pat-a-cake. Infants and Technology: Technology can have a large influence on infant growth and development. Research is finding that infants who are exposed to technology show learning difficulties by the age of nine due to poor executive functioning (needed for higher-level cognition). The results from these studies are supporting the American Academy of Pediatrics' view that discourages all screen time before 18 months old, with the exception of video chatting. Assistive technology devices can have a positive influence on infant growth and development. Some examples include side-lying, prone, or supine frames and crescent-shaped cushions to help with positioning. Specially designed bottles, nipples and ergonomic eating utensils, lipped plates and dishes, adapted clothing, and communication boards can also help infants grow and develop.

Updated Text: Types of Bugs

Even though there are many thousands of kinds of physical bugs (moths, bees, ants,

grasshoppers, flies, etc.), there aren't as many software bugs, thankfully! We will focus on four kinds of software bugs—logic errors, syntax errors, lexical errors, and runtime errors. Before we look at some specific examples of each of these errors, we need to first understand the different classifications of bugs according to their severity:

Critical

A critical bug occurs when there is a fault in the functionality of the software causing a critical piece, or even the entire system, to fail. Examples may include failure to install, the software continuously crashing, or a crucial feature not working at all.

Major

Major bugs happen when there is a fault that affects basic functionality of an important feature. For example, if a calendar app did not allow users to add more than one event per day, this would be a major defect. Another major defect example would be if a department store register started giving 30 percent discounts to every purchase.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Minor

A minor bug occurs when a feature does not meet its requirement or intended functionality but does not have a major impact on the software. Minor defects still need to be resolved, but they do not have as high of a priority as major defects. For example, if a website form does not give the user confirmation that the form has been successfully submitted, this could be considered a minor defect. The major functionality still works (the form is sent), but the user should receive a confirmation message.

Trivial

A trivial bug includes any cosmetic or aesthetic defects such as grammar, spelling, misaligned text, etc. Trivial bugs should still be fixed, but their priority is low as they do not affect the functionality of the software. An example might be if an app had a button with the text “sumbit” instead of “submit.”

Now that we understand the hierarchy of errors, let’s get some practice identifying four types of programming errors—syntax, logic, runtime, and lexical.

Syntax Errors

We’ve already defined a syntax error as a problem that occurs when characters or symbols are incorrectly placed according to the rules of the language. This means that every misplaced symbol such as a comma, parenthesis, quotation mark, bracket, etc., counts as a syntax error because it violates the rules of the language. Other examples include misspelling a variable name or reserved word. You have no doubt already made several syntax errors in your programming career thus far. While syntax errors can be frustrating, they are the easiest type of error to find and fix. Check out an example of a syntax error by logging into PythonAnywhere, creating a new file, and typing in the following code:

```
Proclamation 2024: Report of New Content Addendum (11/08/2023)
```

```
*updated since previous report
```

```
x = 10  
  
while x > 0  
  
print(x)  
  
x -= 1
```

When you run the program, you should receive a syntax error message at the end of the while statement line because there should be a colon after the 0. Your syntax error will be displayed beneath where the error occurs.

Lexical Errors

At first glance, a lexical error may seem similar to a syntax error because they both deal with characters or symbols that are used incorrectly. However, a lexical error occurs when a sequence of characters is not allowed in a particular language. The compiler or interpreter doesn't know what to do with the characters, so it will throw an error during execution. Note: in Python (and other languages), lexical errors are not usually called "lexical"; instead, you'll probably see them labeled as a name error or syntax error.

If you try to use the statement `x = 1abc`, most languages will throw a lexical error because `1abc` is not a valid sequence of characters for a variable (it's not a string or a number). If you end a statement with an invalid symbol such as `$` or `"`, then you have also committed a lexical error.

Try running this program in PythonAnywhere:

```
runner-up = input("Please enter the name of the runner-up: ")  
  
first-place = input("Please enter the name of the person in first place: ")  
  
print("Congratulations", runner-up, "and", first-place)
```

You will get an error because `runner-up` and `first-place` are not valid variable names since they contain hyphens. This means that the lexical analyzer cannot match the characters "runner-up" with a valid pattern in the Python language, so the program gives an error.

Updated Text: Data Communication Advancements

These days, a reliable data communication system is a key part of doing business as most organizations use the internet to communicate and transfer data. They may use a software messaging tool, email, cloud data storage, or the good old-fashioned telephone. Before we look at the threats and risks to these systems, let's investigate some of the cool computing advancements in this area.

One of the coolest advancements is 5th generation cellular technology (5G). It's a new kind of network technology that allows faster mobile broadband connections, relieves the burden of too many devices connected to Wi-Fi, and even creates a more realistic, seamless gaming experience for video gamers.

You may have heard of supercomputers—advanced computers with tens of thousands of processors that can solve complex problems in a matter of minutes. Brace yourself because quantum computers are blowing supercomputers out of the water! While the details are a bit too complicated for our purposes, you should know that quantum computers use qubits instead of regular bits for storing data. Whereas a bit can only be on or off (1 or 0), a qubit can be simultaneously on and off. If that doesn't blow your mind, also consider the fact that a single qubit can represent more than one number at the same time, which means it can perform calculations at ridiculously fast speeds. In fact, a quantum computer recently developed by Google outperformed the world's fastest supercomputer by 47 years!¹

Faster network technologies like 5G and faster computers like quantum machines are already disrupting the landscape of data communication. Imagine a world where clean energy is the norm for everyone in the world, supply chain disruptions are eliminated, batteries last longer than ever, traffic jams are a thing of the past, and complex financial investments are done in seconds. The future is looking bright!

Data Communication Risks

With these computing advancements in mind, we also need to consider the many threats that can affect data communication systems. If an organization's internet connectivity is compromised, communication will suffer and could cost the company money in lost sales or reduced services. For example, if the popular online retail website Amazon went down for just an hour, it would cost them millions of dollars in lost revenue. If a data center does not have adequate

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

physical security, servers containing valuable data could be damaged or destroyed. If a data center does not have robust cybersecurity measures in place, the servers could be

vulnerable to hacking.

Web services like internet calling, known as Voice Over IP or VoIP, can have

vulnerabilities that might be exploited. If the VoIP provider is not using an encrypted

connection for calls, the communication could be vulnerable to

eavesdroppers. Valuable information might be stolen and sold to competing organizations. Since VoIP uses an internet connection, if the internet service provider

or the company's network comes under attack by a hacker, VoIP communication

might be disrupted. Web calls can be particularly vulnerable if they are made on a

public or shared network, such as at a coffee shop or in a mall. Quantum computers can even break normal encryption methods, calling for more advanced cybersecurity techniques.

Aside from malicious threats, if employees are not trained properly in how to use the

communication tools, there could be other risks to the system. Employees should be

given the minimum amount of access and responsibilities in the system that they need

in order to complete their job. Disgruntled employees can also provide a risk to the

system, and they can enact harm from the inside if given too much access.

Updated Text: Software Application Advancements

As computers themselves become more advanced, we're also seeing new trends in nearly every field that uses technology. Moving to the area of software applications, there are some exciting computing-related advancements. As we did before, let's investigate these before learning about the associated threats and risks.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Page 322 of 362

Artificial intelligence (AI) is a buzzword these days, and it is worth the hype! AI refers to a machine solving problems that normally require human intelligence. AI can transform data communication and networking by identifying problems before they occur, automating complex processes, and using machine learning to comb through massive amounts of data to look for patterns. As more people than ever before are working remotely, AI is providing helpful tools for monitoring and analyzing employee productivity. And did you know that 97 percent of smartphone users routinely use AI-powered digital assistants such as Siri, Google Assistant, and Alexa?¹

AI isn't the only technological trend, however. As processors become smaller and more powerful, more devices are connected to the Internet of Things (as we'll learn more about soon), augmented and virtual reality are changing the ways that businesses communicate, blockchain technology is disrupting more than just the cryptocurrency space, and cloud computing is revolutionizing the way that people access software and do their work.

Software Application Risks

Some pieces of software carry more importance than others, and vulnerability to risks could prove harmful or fatal to human lives. Examples of such software might include air traffic control systems, hospital equipment, and car software. But even software that is not directly responsible for human lives can still hurt the company if it is compromised in some way.

Original Text: New Content

Updated Text: 4. Many different areas have been affected by computer-related advancements. Choose one particular field (e.g., finance, science, health, sports, etc.) and describe how artificial intelligence (AI) has affected that field. What possible ways could AI benefit that field in the future?

Answers will vary but may include:

AI machine learning has affected health care by decreasing the amount of time needed to review test results, which means diagnoses can be made faster and treatment can begin sooner. In the future, this could result in less expensive and more timely testing.

Original Text: New Content

Updated Text: In the unit, you started coding a program that uses a list to store states that a user inputs. In this activity, you will use PythonAnywhere to create a menu that gives the user various choices corresponding to list operations.

Step 1: Make a Plan

Before you jump into coding, take a moment to make a plan. If you follow a systematic problem-solving process, your program is more likely to be successful.

Start by identifying the purpose of the program. The purpose should explain the “why” behind the program at a high level. In other words, what is the point of developing the program?

What specific goals does the program have? This is tied to functionality (what the program does). Goals are the “what” behind the program. Note: you don’t need to explain “how” the goals will be accomplished.

What kind of data type(s) or structure(s) will you need to use to accomplish the goals?

Identify any subtasks that need to be completed. For example, if you are creating a menu, break down each menu option into subtasks that need to be coded.

Journal your answers to these problem-solving questions in a word-processing document.

Step 2: Create Menu Options

Allow the user to choose whether they want to insert or append a state, remove a state, search for a state, modify an existing state, print the list, or quit the program. After the user chooses to quit, sort and print the final list.

Step 3: Validate

For each choice, make sure that you are validating the user input. Convert the user input to lowercase letters and then use a list to check for variations of input. (For example, the user should be able to type “remove” or “r.” Refer back to Lesson 3 if you need further examples.)

Step 4: Code the Options

Write the appropriate code for each option listed in the user menu.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Step 5: Test

Run your program and test out all the various operations that a user might do. Fix any bugs.

Step 6: Submit Your Program

Click on the Share button in the upper right part of the screen in PythonAnywhere. Click Get Sharing Link. Then click the clipboard symbol to copy the link. Paste the link into the dropbox to submit. Also, submit the word-processing document with your problem-solving plan.

If you are not able to get your code to run correctly, write a paragraph explaining why and what you attempted to try to fix the problem(s).

Updated Text: Prepare

This section is where the rubber meets the road. You'll make specific plans according to the reflections and research you've done. Maybe you'll attend a specific university or do an online program. Maybe you'll sign up for a certification test or attend a program in your area. You might start applying for internships or contact people in your chosen field to set up a job shadowing opportunity.

Whatever your plans, make sure to be specific. Label them clearly, such as Goal 1, Goal 2, etc., and include your timeline. For example, Goal 1 might be to join a local FBLA chapter to develop leadership skills, and you might plan to make that happen by next month. You may want to organize it in a table format such as the following:

TABLE Career Plan

Start Date

Expected Completion Date

Opportunity Type

Facilitator

Outcome

(job, internship, club, online course, mentoring, etc.)

(teacher, mentor, coach, online educator, etc.)

Proclamation 2024: Report of New Content Addendum (11/08/2023)

(new skills, degree, certification, etc.)

CALLOUT BOX

Such a Softie

Part of preparing for your future career involves developing your soft skills. No, we're not talking about being a "softer" person, whatever that means. Think of soft skills as your people skills. You may know how to write amazing code, but how well do you manage your time? How well can you work on a team, handle conflict, or organize your surroundings? You'll have many opportunities to develop these skills as you progress, but one that's worth putting in the hard work right now is time management.

Here are some quick and easy ideas to get you started on managing your time effectively, and they work well for all areas of your life:

Get an early start: avoid procrastination and dive right in.

Prioritize effectively: decide which tasks are the top priority and work on those first.

Make a plan: instead of a to-do list, create a priority list and tick off tasks as you get them done.

Minimize distractions: avoid checking social media or responding to messages while you're working—put your phone in another room and only check it each hour, if possible.

Chunk your time: set a timer for 20 minutes and focus on completing a task without interruptions; take a break and then repeat.

Original Text: New Content

Updated Text: Troubleshooting Practice

Step 1: Identify Common Tools for Monitoring Ports

For this activity, you will use the network analysis tools you learned how to apply on your own computing device and take steps that would likely need to be performed if you were diagnosing a computer problem in real life.

First, use either the `ipconfig /all` or `ifconfig` command and take a screenshot of the information provided (as demonstrated in Unit 4, Lesson 5). Next, ping your default gateway (using the information you just looked up!) and take a screenshot of the ping report.

After that, let's try an online site you know is working—the very site you are using now! Ping this website (only up to the initial `.com`, not the full URL address) and take a screenshot of that ping report.

After you have your ping report, use the command line to trace the route taken to get from your system to this website's host. Once more, get a screenshot of the report!

Next, take a screenshot of the current network conversations your client device is having (or only the first page if they are longer than one screenshot can capture). Remember that you should see a mix of `ESTABLISHED`, `TIME_WAIT`, and `CLOSE_WAIT`.

Finally, take a screenshot that shows the full list of services for your computer (only the first page). In a text file, select any two services that the screenshot shows are currently running, and describe what each service does. Include in your text file the steps you would take to stop the service if you needed to (or start an inactive service).

Step 2: Identify Common Tools for Monitoring Network Traffic

Download and install Wireshark and nmap, common tools for monitoring network traffic and ports. Open Wireshark and

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

start a new live capture. To do this, select capture, then interfaces, and then select your network adapter. Let the program run for about three minutes before stopping the capture. This will give you a list of packets that have been sent and/or received by your computer.

Analyze the traffic by looking at the captured traffic from Wireshark. Identify different protocols such as HTTP, HTTPS, DNS, ICMP, etc. Make a note of the source destination IP addresses, the protocol used, and the associated port numbers. Investigate ports by using nmap to scan your device to see which ports are open. It is common for some antivirus software to be seen as a threat; ignore this. Run command “nmap -sT -O localhost.” View the output and write down the open ports and the services they are associated with. Use your network’s router admin panel to view connected devices and active connections. Write down the IP addresses of connected devices and any available information about the traffic type being generated.

Note connections between the active services and the ports that are being used. Identify traffic that corresponds with HTTP/HTTPS (ports 80/443), DNS(port 53). Create a report on your findings. Describe the traffic you captured and the ports that were open on your device. How could the information you gathered be used to enhance network security?

Part 3: What to Submit

Your submission for this activity should include the following materials:

- A screenshot of the ipconfig /all or ifconfig information
- The ping report for the default gateway
- The ping report for this website
- The trace route for this website
- A screenshot with a list of network conversations
- A screenshot with a list of local services
- A text file describing two services and explaining how to stop or start each service
- A network security report

Updated Text: Who Are the Players?

Introduction

Now that we have analyzed how to embed basic security principles in our network, it is a good time to turn our attention to the people who might attempt to intrude into our network by gaining unauthorized access to it. We have already examined organizations whose networks were compromised, but we have not discussed in detail who the perpetrators were or what their motivations may have been.

The term often used to describe these perpetrators is “hacker,” which is a person who uses computers to gain unauthorized access to data. The image of a person in a dark hooded sweatshirt may come to mind when you hear the term, but in reality, there are different types of hackers. There are black hats, white hats, and gray hats. Black hats fit the more traditional image of a bad guy. A black hat is a hacker who uses their knowledge of digital systems to access them unlawfully for personal gain. Black hats create malware and force their way into networks to shut them down or steal sensitive data. The unethical practices of black hats not only compromise the security of individuals and organizations but can also lead to legal consequences, resulting in fines, jail time, and loss of professional reputation. White hats, on the other hand, are often viewed as the good guys or the ethical hackers. A white hat is a paid network professional who searches for system vulnerabilities and creates fixes and then releases them to the general public so that others can also protect their networks. These professionals adhere to ethical standards and legal guidelines, demonstrating that strong cybersecurity can be practiced without crossing ethical boundaries. Their role is a testament to the importance of ethical responsibility in ensuring network security.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Gray hats are a little more complicated to describe. A gray hat is someone who performs illegal or ethically questionable acts but does so for what they perceive to be the common good. A classic example of a gray hat is someone who independently breaks into a network in order to demonstrate to the network administrators that the network is insecure. While the intentions of gray hats may seem beneficial, they bring forth ethical ramifications. The unauthorized access, despite the intention, remains an intrusion and can lead to mistrust, potential damage, and legal issues. Their actions highlight the fine line between ethical and unethical behavior in the realm of cybersecurity. It is important to note that there are several legal and ethical issues guiding the classification of hackers. The individuals who fit into these categories possess the same skills and utilize the same techniques; the factor that differentiates them is their motivation. As you progress on your journey toward becoming a network security professional, these classifications will be important to remember. For many reasons, you will want to remain on the right side of the law.

Updated Text: Not Always Black and White

Legal vs. Illegal

As you've been reading the material in this unit, a question may have popped into your head: Is it legal to use the tools that we're learning about? Well, yes and no...it's complicated. There are a few guiding principles to keep in mind if you want to become a network security practitioner. All the information you've seen and more—that is, resources, tools, videos, tactics, and attack vectors—are, for the most part, publicly available. How you decide to use that information is what matters.

For example, if you download a tool and want to try it out, you should keep certain principles in mind. Testing this tool on a virtual machine that you own is fine if the network traffic does not leave your house. If you use the tool on a machine or network that you do not own or do not have permission to conduct that type of activity on, it is illegal. Network hacking activities carry significant penalties at both the state and federal levels. Some TV shows and movies glorify computer hacking, but in many cases, it is illegal. If you run NMAP or Metasploit against your school network, it is a crime.

Other hacking activities are completely legal. In a network security class, you are in a controlled lab environment where you can test different tools to build proficiency in their use. Also, white hats have specific contracts that authorize them to test defenses and attempt to break into networks they don't own.

There are also "bug bounty" programs in which companies invite you to test their software and systems by attempting to uncover vulnerabilities in them. These programs require you to disclose any vulnerability you find to the software vendor; you cannot share it with or sell it to anyone else. Breaking the agreement by selling the exploit or using it to break into a system is illegal and would set your activity squarely in black hat territory.

The field of cybersecurity requires an acute understanding of legal responsibilities in addition to technical skills. This means recognizing the laws and regulations that govern activities related to hacking, data privacy, and network security. Demonstrating your understanding of these legal responsibilities is crucial to becoming a respected cybersecurity professional. Understanding the law helps you navigate the fine line between ethical hacking (with permission and for the purpose of improving security) and illegal activities. Furthermore, it is also crucial to keep abreast of any changes to cyber laws and regulations, as they can evolve with the rapidly changing tech landscape. By fully comprehending and adhering to these legal responsibilities, you ensure the trust of your clients, uphold your reputation in the field, and importantly, avoid potential legal consequences.

As you may have already intuited, working in this field requires a strong ethical compass so that you know when and how to apply your skills. Here is the best advice: If you can do the right thing when no one is looking, you will not run into any legal issues.

Updated Text: Grayware vs. Defender

Imagine that you have installed a specific browser plugin, such as a free game from the internet, and that you have followed this up by installing a smart home control package. During the installation of these applications, you were presented with a screen that explained what the software would do, and you checked off a box to indicate your acceptance of the terms and conditions, thus accepting some level of inherent risk.

Many times during the software installation, you were asked for permission to make changes to your system as well as for access to your search history and location data. While these permissions may have been required for the application to run and you were completely comfortable granting them, Defender would still have found the behavior odd and alerted you. This is a form of risk management, where the software assists you in identifying potential threats and making informed decisions about the level of risk you're willing to accept.

Messaging Protections

Phishing

Email phishing takes place when fraudulent emails are sent to users who are enticed into clicking on links. This is something that can keep sysadmins up at night. Disney+ has become a very popular streaming service since it launched. Would you click on the message below?

Emails that require the recipient to reset their password and/or that ask for personal information are usually a scam and will hopefully be discarded by users.

This email is, in fact, a phishing scam, and the "Reset Password" link directs users to a malicious website. Disney+ was not hacked or breached, but enterprising criminals find creative ways to trick users into clicking on links. Here we see an instance of risk acceptance. Despite the known risks of phishing attacks, users may still be lured into clicking on these deceptive links due to a perceived sense of urgency or relevance.

How can we protect our users from falling for these types of attacks? We could spend millions of dollars on equipment—and many organizations do—but the best tool sysadmins have is training to educate users about what types of messages should make them suspicious about clicking on links when items like this make it past other layers of security. The more training users get, the better it is. An organization's security awareness training program, along with its acceptable use policies, are important items that management should support. Technology solutions are important layers of protection, but we cannot rely on technology alone to protect our networks.

Updated Text: File Permissions

Once the share is configured, you should look one level deeper at specific folder and file permissions. The share

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

permissions have already been set, but there may be a need to apply additional permissions on a more granular level. In modern-day Windows operating systems, the NTFS file system allows us to set and grant access to files. In the former FAT Windows file system, the sharing and permission options were limited.

For example, consider a typical organizational structure: an IT administrator, a manager, and a standard employee will all require different levels of access. An IT administrator may need full control over most or all resources. A manager may require access to resources within their department but not sensitive IT configurations. Meanwhile, a standard employee may only need access to specific documents or applications necessary for their role. These are user roles, and configuring their access appropriately is a central part of system administration.

The Security tab allows you to adjust the specific permissions provided to various groups and user names.

These extended NTFS permissions are accessed by clicking on the Security tab. Here, you can still add individual user accounts or groups and assign them access. The permissions under this tab are more granular than the three we saw under the Share tab. An important point to note as we join Share and Security permissions is that the most restrictive permission will be applied.

Let's take a closer look at this. The most restrictive permission will be applied, so sysadmin best practices recommend that you apply full control to the Sharing tab for the user or group requiring access. Next, you should only apply Security permissions to the folders in the share that restrict access to what is needed. Perhaps the accounting group would have full control in the share, but within the Tax Guidelines folder, they would only have permissions to list folder contents and read. That is, even if the accounting group has full control at the Share level, the most restrictive permissions will be applied in the Tax Guidelines folder.

You are already trained to know that every change of a user or group's file permissions should be documented. In addition, user and group permissions should be reviewed or audited on a regular basis to ensure they are appropriate and continue to follow the principle of least privilege. There are many blogs and sysadmin journals that write about situations in which permissions were mistakenly applied and resulted in groups of users having access to sensitive company information that they should not have had. Given that these settings are applied with simple checkboxes, it is easy to make a mistake. This is another reason the auditing process is important.

Updated Text: Computer Forensics 101

What Is Forensics?

Science has played a role in detecting and solving crimes through the analysis of evidence for a long time. Forensic evidence, which is collected using scientific tests or techniques, has continued that tradition into the 21st century. In fact, forensics has come to play such a prominent role in the investigation of crimes today that juries are said to suffer from the CSI effect, meaning that juries request more forensic information during trial deliberation. Television shows have made jurors reluctant to deliver a guilty verdict without the presence of forensic evidence, even when it is unnecessary and unavailable. The way forensics is portrayed on television by shows like CSI and NCIS has led some people to believe that complicated investigations and analysis of evidence should only take a few hours and are always conclusive.

Unfortunately, in the real world, that just isn't the case.

Investigations can take a significant amount of time, depending on how much evidence needs to be collected and analyzed. Every forensic investigator is guided by a basic concept established by Professor Edmond Locard: "Everything leaves a trace." According to Locard's exchange principle, everything and everyone entering a crime scene leaves evidence behind. Also, everyone and everything take a piece of the crime scene when they leave or are taken away.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

CSI investigators in the real world wear hazmat-style “bunny” suits to minimize their impact on a crime scene while investigating it.

All of this may seem very basic, thanks to the attention paid to forensic science by the entertainment industry. After all, it makes sense that fingerprints are searched for when a business is broken into, but what type of evidence can be collected if that robbery is carried out electronically? Are there digital fingerprints that can be detected and collected as evidence? If your favorite electronics store is broken into, the police will search for a suspect within a certain geographical area, knowing that their suspect may not have gotten far or may have left evidence behind. However, in a digital robbery, where should law enforcement begin to look for suspects?

These are the types of questions we will attempt to answer with the help of computer and digital forensics, which are investigation and analysis techniques used to gather and preserve evidence from a computing device. This is a developing field that emerged in the 1980s. Computer forensics is specifically used to collect evidence found on computers and digital storage devices or media such as hard drives, flash drives, mobile devices, and CD-ROMs. The goal of computer forensics is to examine digital evidence to identify, preserve, recover, analyze, and present facts and opinions about the digital information. Forensic investigators are highly trained individuals who can spot very specific details, referred to as digital artifacts. These digital items left behind by end users of devices shed light on the users’ activities. Many specialties have been developed to deal with different types of digital forensics. These include disks, (wired and wireless) networks, databases, malware, and email.

Importantly, as part of the ethical and legal framework in which all this work takes place, investigators must also have a good understanding of cyberterrorism and counterterrorism. This involves defining and understanding intelligence gathering in the context of cybersecurity. The intelligence gathering is a methodical process of collecting, analyzing, and interpreting data to understand and predict the activities of individuals or groups. In the realm of cyberforensics, this often means gathering digital information that can aid in identifying and tracking potential threats, such as cyberterrorists who seek to use digital means to cause harm. On the flip side, counterterrorism efforts in the cyber realm involve defensive actions aimed at preventing, thwarting, or responding to these threats. In the next section, we will cover how forensic investigators go about collecting this vital evidence.

Updated Text: Cyberbullying

Social media is a great tool, but like many tools—for example, hammers—it can be used either to create or to harm. How a tool is handled is up to the person wielding it. This principle applies both online and offline. Just as we have to be ethical in our physical interactions, so must we ensure our online actions are equally respectful and kind. Social media platforms are awesome at connecting human beings, but they have also given rise to cyberbullying, which makes use of electronic communication to send messages that intimidate or threaten others—many times, children. The phenomenon—which this author calls “courage from behind a keyboard”—describes how people say and post things about a person that they would never say if they were standing in front of that person. Moreover, this discrepancy between online and offline behaviors highlights the need for practicing ethical conduct consistently, whether we’re interacting face-to-face or through digital platforms. Social media platforms have facilitated this phenomenon by making it very easy to send or post intimidating or threatening messages. In addition, cyberbullies can be tough to identify because they adopt fake names or can remain totally anonymous on some platforms.

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Cyberbullying vs. Bullying

What's the difference?

Bullying is nothing new in our society; it has been around for centuries. It's an unfortunate fact that there are some who find comfort in putting other people down. In "traditional" bullying, however, the victim could sometimes get away from the bully by going home or finding some way to put physical distance between them and the bully. With cyberbullying, the victim can't escape the constant messaging and harassment unless the victim just turns off their digital devices altogether, which may not be possible. Constant, hurtful messaging like "You're ugly," "You have no friends," and "You're stupid" take their toll on people. Or perhaps an embarrassing photo of a person is posted on the internet and becomes the subject of constant negative conversation. It's important to remember that these unethical behaviors online would not be acceptable offline and hence should not be practised on any platform. These aspects of bullying are newer.

Cyberbullying can be an uncomfortable subject to talk about, but the discussion is necessary in order to raise awareness. Victims of constant cyberbullying can experience lasting negative consequences regarding their health and wellness, as illustrated below. The following data was provided in response to an annual survey that asks students to identify issues that they attribute to their experiences with cyberbullying.

Updated Text: Legal Policies and Privacy
Cyberlaw

A rapidly changing area of cybersecurity has formed on the legal front. Countries have scrambled to find ways to protect their citizens' data and privacy. In this unit, we have briefly examined cyber incidents from across the globe. Countries have different cultures, governments, philosophies, customs, and laws. Cyberlaw represents an entire field of work in its own right—one that you may be interested in exploring for yourself. This lesson provides just a brief overview of the complex landscape covered by cyberlaw.

Global law firm DLA Piper provides a world map that details the extent to which the law of data privacy is developed in different countries. This is a fantastic resource for researching the laws countries currently have on their books and the types of laws they could implement in the future. In the United States alone, there are industry-specific laws that address financial markets, telecommunications companies, healthcare information, credit information, and children's information. Each state also has its own data privacy laws; some states' laws are more restrictive than those of others. Any business that stores information about its customers must be aware of and adhere to the laws and regulations in the jurisdiction where the company's customers live. Compliance can be a daunting task for system administrators and chief information security officers.

While this lesson offers a snapshot of the ever-evolving field of cyberlaw, it's vital to understand the legal ramifications of violating these laws. Penalties for non-compliance can range from hefty fines to criminal charges, which could have significant impacts on both individuals and businesses. Furthermore, non-compliance with data privacy laws could potentially lead to damaging breaches of customer data, causing severe reputational damage and loss of trust.

Cyberlaw and Policing

As we have discussed many times in this course, some data protection laws deal specifically with encryption as a method of protecting data. However, a secondary issue arises after data encryption: What happens if law enforcement needs

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

access to that data and an individual or organization will not provide the encryption key? This is a complicated issue that has been playing out in the legal system.

One such event occurred in late 2015 and 2016. In December 2015, Syed Farook went on a shooting spree in San Bernadino, California, killing 14 of his coworkers. Farook was eventually killed in a shootout with police that same day. During the investigation, the police recovered Farook's Apple iPhone as evidence. The phone was locked with a four-digit passcode that the FBI was unable to determine. The FBI requested Apple's assistance to open the suspect's phone to see if he had been in contact with any other terrorist organizations or acted alone. Specifically, they requested that Apple create a special version of its operating system to allow an unlimited number of attempts to crack the four-digit code without erasing any of the data.

Eventually, the FBI abruptly dropped its case against Apple. It was reported that the FBI had gained access to the data without Apple's assistance by allegedly engaging an Israeli data company to break into the device. This case is just one example of many in which law enforcement requested access to digital data as part of an investigation. The Apple case just happens to be one of the most public ones. It's crucial to comprehend the potential legal ramifications of such cases, as they often set precedents for future cyberlaw practices and regulations. This is especially pertinent for security professionals who must ensure that their practices align with evolving legal standards and public expectations of privacy.

Updated Text: Web-Based Programming Languages Using a web-based language typically means writing and executing code directly in a web browser. This approach offers various advantages, such as accessibility, collaboration, and ease of sharing. Methods for using web-based language development include: 1. Online Integrated Development Environments (IDEs): Web-based IDEs provide a complete development environment accessible through a browser. These platforms usually include code editors, debugging tools, and compilers/interpreters for various programming languages. Examples include Replit, CodeSandbox, and Glitch. 2. Code Playground: Code playgrounds are online platforms that allow you to write, run, and experiment with code snippets in real time. They often support multiple programming languages and provide immediate feedback on the output. Popular playgrounds include JSFiddle, CodePen, and PythonAnywhere. 3. Cloud-based Development Environments: Cloud-based development environments, like AWS Cloud9 and Gitpod, enable you to develop and run code entirely in the cloud. These platforms provide a full-featured IDE accessible via a web browser and are particularly useful for collaborative projects. 4. Web-based Notebooks: Jupyter Notebook and Google Colab are examples of web-based notebook environments that allow you to combine code, visualizations, and explanatory text in a single document. Notebooks are widely used for data analysis, machine learning, and scientific computing. 5. Online Code Editors: Several web-based code editors, such as Visual Studio Code (VS Code) and Atom, can be run directly in a browser using web-based versions or through browser extensions. These editors offer powerful features, extensions, and integrations with various programming languages. 6. Web-based Language-Specific Tools: Some programming languages have their web-based tools for development and execution. For instance, JavaScript has websites like JS Bin and JSfiddle, which provide environments tailored specifically for JavaScript coding and testing.

Original Text: Many computer crimes start when an unauthorized user hacks, or gains unauthorized entry, into a computer network. This often happens when the intruder learns the password to access the victim's computer and the

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

Page 348 of 362

network. Too often, computer users choose passwords that are easy for them to remember, such as birthdates, names of pets, names of celebrities, and names of family members. Unfortunately, these passwords are also easy for intruders to guess. Surprisingly, the most common passwords used are “password” and “123456,” both of which are extremely weak. Always use a strong password. Don’t use things like family names, nicknames, or birth dates. Random passwords are often the strongest, like S3nD3v?. Use a combination of at least six upper- and lowercase letters, numbers, and symbols. Often the site will let you know if your password is strong enough. Some sites require you to use a passphrase, which is similar to a password but is longer and includes a string of words, not just characters. Other tips for a strong password or passphrase include: Change your password or passphrase every few months. Some sites may require this. Do not keep a record of your passwords or passphrases on your computer or on a piece of paper near your computer. Never give out your passwords or passphrases to anyone. Never type a password or passphrase while someone is watching. Most websites now offer multifactor authentication, which adds a second or even third layer of security to password access. Multifactor authentication requires you to use two or more verification factors to access a resource. It can be used for devices, like a smartphone, tablet, or computer, or for access to an online account or private network. For example, instead of just entering a password, you might also have to enter a biometric identifier, such as a fingerprint or face scan, a code that you receive via text or email on a different, verified device, or the answer to a security question.

Updated Text: Strong passwords are critical to maintaining secure online accounts and protecting personal, financial, or otherwise sensitive information from unauthorized access. Here are some of the key values of using strong passwords: 1. Prevent Unauthorized Access: Strong passwords help protect your accounts from unauthorized access. This is particularly important for accounts that contain sensitive information, such as email accounts, banking, social media, and online shopping accounts. 2. Protect Personal Information: Passwords often serve as the first line of defense in protecting your personal information. A strong password can prevent someone from accessing your personal data, including your address, phone number, social security number, and financial information. 3. Defend Against Identity Theft: If someone gains unauthorized access to your personal information, they could potentially impersonate you, leading to identity theft. A strong password makes it much more difficult for someone to access this information. 4. Avoid Financial Loss: Strong passwords are especially critical for online banking and e-commerce sites where your financial information is stored. If someone gains access to these accounts, they could make unauthorized transactions, leading to potential financial loss. 5. Prevent Damage to Reputation: If someone gains access to your social media or professional networking accounts, they could potentially damage your reputation by posting inappropriate or damaging content. 6. Safeguard Confidential Business Information: If you use passwords for work-related applications or data, a strong password can protect this sensitive information from competitors or other unauthorized parties. 7. Reduce the risk of cyber attacks: Strong passwords can also help prevent cyber attacks such as brute force attacks, where attackers try to gain access to your account by systematically checking all possible passwords until the correct one is found. In summary, strong passwords are essential for online security. They protect personal, financial, and professional information from unauthorized access and misuse. The stronger your password, the more protected you are from threats and potential cybercrime.

Updated Text: Web-Based Programming Languages Using a web-based language typically means writing and executing code directly in a web browser. This approach offers various advantages, such as accessibility, collaboration, and ease of sharing. Methods for using web-based language development include: 1. Online Integrated Development Environments (IDEs): Web-based IDEs provide a complete development environment accessible through a browser. These platforms usually include code editors, debugging tools, and compilers/interpreters for various programming languages. Examples

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

include Replit, CodeSandbox, and Glitch. 2. Code Playground: Code playgrounds are online platforms that allow you to write, run, and experiment with code snippets in real time. They often support multiple programming languages and provide immediate feedback on the output. Popular playgrounds include JSFiddle, CodePen, and PythonAnywhere. 3. Cloud-based Development Environments: Cloud-based development environments, like AWS Cloud9 and Gitpod, enable you to develop and run code entirely in the cloud. These platforms provide a full-featured IDE accessible via a web browser and are particularly useful for collaborative projects. 4. Web-based Notebooks: Jupyter Notebook and Google Colab are examples of web-based notebook environments that allow you to combine code, visualizations, and explanatory text in a single document. Notebooks are widely used for data analysis, machine learning, and scientific computing. 5. Online Code Editors: Several web-based code editors, such as Visual Studio Code (VS Code) and Atom, can be run directly in a browser using web-based versions or through browser extensions. These editors offer powerful features, extensions, and integrations with various programming languages. 6. Web-based Language-Specific Tools: Some programming languages have their web-based tools for development and execution. For instance, JavaScript has websites like JS Bin and JSfiddle, which provide environments tailored specifically for JavaScript coding and testing.

Original Text: Many computer crimes start when an unauthorized user hacks, or gains unauthorized entry, into a computer network. This often happens when the intruder learns the password to access the victim’s computer and the network. Too often, computer users choose passwords that are easy for them to remember, such as birthdates, names of pets, names of celebrities, and names of family members. Unfortunately, these passwords are also easy for intruders to guess. Surprisingly, the most common passwords used are “password” and “123456,” both of which are extremely weak. Always use a strong password. Don’t use things like family names, nicknames, or birth dates. Random passwords are often the strongest, like S3nD3v?. Use a combination of at least six upper- and lowercase letters, numbers, and symbols. Often the site will let you know if your password is strong enough. Some sites require you to use a passphrase, which is similar to a password but is longer and includes a string of words, not just characters. Other tips for a strong password or passphrase include: Change your password or passphrase every few months. Some sites may require this. Do not keep a record of your passwords or passphrases on your computer or on a piece of paper near your computer. Never give out your passwords or passphrases to anyone. Never type a password or passphrase while someone is watching. Most

Proclamation 2024: Report of New Content Addendum (11/08/2023)

*updated since previous report

websites now offer multifactor authentication, which adds a second or even third layer of security to password access. Multifactor authentication requires you to use two or more verification factors to access a resource. It can be used for devices, like a smartphone, tablet, or computer, or for access to an online account or private network. For example, instead of just entering a password, you might also have to enter a biometric identifier, such as a fingerprint or face scan, a code that you receive via text or email on a different, verified device, or the answer to a security question.

Updated Text: Strong passwords are critical to maintaining secure online accounts and protecting personal, financial, or otherwise sensitive information from unauthorized access. Here are some of the key values of using strong passwords: 1. Prevent Unauthorized Access: Strong passwords help protect your accounts from unauthorized access. This is particularly important for accounts that contain sensitive information, such as email accounts, banking, social media, and online shopping accounts. 2. Protect Personal Information: Passwords often serve as the first line of defense in protecting your personal information. A strong password can prevent someone from accessing your personal data, including your address, phone number, social security number, and financial information. 3. Defend Against Identity Theft: If someone gains unauthorized access to your personal information, they could potentially impersonate you, leading to identity theft. A strong password makes it much more difficult for someone to access this information. 4. Avoid Financial Loss: Strong passwords are especially critical for online banking and e-commerce sites where your financial information is stored. If someone gains access to these accounts, they could make unauthorized transactions, leading to potential financial loss. 5. Prevent Damage to Reputation: If someone gains access to your social media or professional networking accounts, they could potentially damage your reputation by posting inappropriate or damaging content. 6. Safeguard Confidential Business Information: If you use passwords for work-related applications or data, a strong password can protect this sensitive information from competitors or other unauthorized parties. 7. Reduce the risk of cyber attacks: Strong passwords can also help prevent cyber attacks such as brute force attacks, where attackers try to gain access to your account by systematically checking all possible passwords until the correct one is found. In summary, strong passwords are essential for online security. They protect personal, financial, and professional information from unauthorized access and misuse. The stronger your password, the more protected you are from threats and potential cybercrime.

Location: Primary Memory and Secondary Memory

Original Text: Primary memory, or main memory, is the computer's work area. It is also called primary storage. This is where the computer stores a program while the program is running, as well as the data that the program is working with. For example, suppose you are using a word processing program to write an essay for one of your classes. While you do this, both the word processing program and the essay are stored in main memory. One type of primary memory is called random-access memory (RAM). It is called this because the CPU is able to quickly access data stored at any random location in RAM. RAM is usually a volatile type of memory that is used only for temporary storage while a program is running. When the computer is turned off, the contents of RAM are erased. Inside your computer, RAM is stored in chips, similar to the ones shown in Figure 1-5. Another type of primary memory is called read-only memory (ROM). ROM chips store instructions for starting the computer. ROM is nonvolatile memory. It stores data permanently, even when the power to the computer is off. Secondary memory is a type of memory that can hold data for long periods of time, even when there is no power to the computer. Secondary memory is what most people think of as storage, or secondary storage. Programs are normally stored in secondary memory and loaded into main memory as needed. Important data, such as word processing documents, payroll data, and inventory records, is saved to secondary storage, as well. The most common type of secondary storage device is the disk drive. A traditional disk drive stores data by magnetically encoding it onto a spinning circular disk. Solid-state drives store data in solid-state memory. A solid-state drive has no moving parts and operates faster than a traditional disk drive. Most computers have some sort of secondary storage device, either a traditional disk drive or a solid-state drive, mounted inside their case. Even cell phones have internal storage, and can perform as external storage devices, as well. External storage devices, which connect to one of the computer's communication ports, can be used to create backup copies of important data or to move data to another computer.

Updated Text: Primary Memory Primary memory and primary storage are two different terms often used interchangeably, but they actually refer to two distinct concepts within computer architecture. 1. Primary Memory: Also known as main memory, primary memory includes Random Access Memory (RAM) and cache memory. This is the memory used by a computer to execute programs and operations. The CPU can read from or write to this memory very quickly. RAM is volatile, meaning it only retains data while the computer is on. When you turn off the computer, anything stored in RAM is lost. Cache memory, another part of primary memory, is smaller but faster than RAM and stores frequently accessed data to speed up the operation. 2. Primary Storage: This term is often used to refer to the primary location where data is stored, especially in the context of an extensive system or network. This could include both primary memory (like RAM) and non-volatile storage devices, like hard drives or solid-state drives (SSD), which store data even when the computer is turned off. In some contexts, "primary storage" may refer to non-volatile storage devices. This storage can be slower to access than primary memory, but it's used to store data and programs when they're not in active use. So, in general, primary memory refers to the fast, volatile memory that a CPU uses for active operations. In contrast, primary storage can include this memory as well as slower, non-volatile storage devices used for longer-term storage. The exact definitions can vary depending on the context, so it's a good idea to clarify if it's not clear from the situation. Secondary Memory Secondary memory and secondary storage refer to the same concept, which is non-volatile storage in a computer that persists even when the computer is powered off. These terms are often used interchangeably. This form of storage typically includes devices like hard drives, SSDs, CDs, DVDs, USB drives, and other types of storage media. It's where a computer stores data that is not being actively used by its processor (CPU), including the operating system, software programs, and files. To summarize, secondary memory and secondary storage refer to the same thing

*updated since previous report

but are just different terminologies used in computing. They contrast with primary memory or storage (like RAM), which is faster but volatile, meaning data stored in it is lost when power is removed.

Original Text: Imagine you are taking a picture of a sunset over a lake, and your phone slips out of your hands. You watch as it sinks to the bottom. Or, you put it down in the driveway and someone backs a car over it. What happens to your files, contacts, pictures, and videos? Losing a device does not have to be a disaster as long as you have backed up your data. Backing up is simply creating a copy of the data that is stored separately in an off-site or remote location away from the original. You can back up data manually or use a program that performs the backup automatically on a set schedule. You can restore the data to a new device from the backup. Now, think about what happens to your data when you trade in the device for a new one. Is your old data still stored on the old device? Who might have access to it? Deleting a file will not keep it secure. Hackers can easily find deleted files. To make sure information is not left on a device, you must reformat or wipe the drive, which destroys all files. You can clear a smartphone or tablet by resetting it to its factory configuration or using the Erase All command, then removing the SIM card, if there is one. Before you do, however, make sure you back up your contacts, photos, and any other information you want to keep so you can install it on your new device.

Updated Text: A computer virus is a type of malicious software program that, once executed, replicates by modifying other computer programs and inserting its own code. It often causes harm by corrupting system data, wasting resources, or disrupting the normal functioning of the computer system. The value of virus protection, especially in our increasingly digital world, cannot be overstated, as it safeguards our sensitive data from cyber threats and malicious software. It provides a critical layer of defense, preventing unauthorized access to our personal and professional information, thereby maintaining privacy, integrity, and system functionality. Moreover, investing in robust virus protection mitigates the risk of costly disruptions and potential loss, fostering confidence and trust in digital technologies.

Updated Text: Virus prevention procedures are crucial for safeguarding privacy and security in today's digital landscape. They help defend against malware, ransomware, and other malicious software that can compromise sensitive data or grant unauthorized access to personal information. Following proper virus prevention procedures are essential for:

- Protection against financial loss
- Preservation of reputation
- Regulatory compliance
- Protection of intellectual property
- National security
- Personal privacy

By implementing robust virus protection measures, individuals and organizations can mitigate the risk of data breaches, identity theft, and other cyber threats, ensuring the integrity and confidentiality of their digital assets.

Page 356 of 362

Updated Text: 1. Integer division (also known as "floor division"): Integer division is the mathematical division operation where the decimal portion of the division result is truncated or rounded down, resulting in an integer. For example, in Python, integer division is performed using the // operator. If you perform the operation $9 // 4$, the result will be 2, not 2.25. 2. Real division (also known as "floating-point division"): Real division is the mathematical division operation where the complete quotient is preserved, including the decimal portion. For instance, in Python, real division is performed using the / operator. If you perform the operation $9 / 4$, the result will be 2.25. In many programming languages, the type of division performed depends on the types of the numbers being divided. If both numbers are integers, then integer division is often the default. If one or both numbers are floating-point numbers (which can represent non-integer values), then real division is typically used. However, this behavior can vary between languages, so it's always a good idea to check the specific rules for the language you're using.

Location: The CPU

Original Text: New Content

Updated Text: A central processing unit (CPU) executes programs by performing a series of basic operations in a specific order. The CPU follows instructions provided by the program and carries out various tasks to perform calculations, manipulate data, and control the flow of the program. Here is a high-level overview of how a CPU runs or executes programs:

1. Fetch: The CPU fetches the next instruction from the program stored in memory. The program counter (PC) keeps track of the memory address of the next instruction to be executed.
2. Decode: The fetched instruction is decoded to determine the operation to be performed and the operands involved. The CPU's instruction set architecture defines the format and meaning of instructions.
3. Execute: The CPU executes the instruction by performing the required operation. This may involve arithmetic calculations, logical operations, data movement, or control flow instructions such as branches or jumps.
4. Memory Access: If the instruction requires accessing data from memory, the CPU fetches the data from or stores the data to the appropriate memory location. This step ensures that the CPU can read and write data as needed during program execution.
5. Write Back: After the instruction is executed, the results are written back to the appropriate registers or memory locations, depending on the operation performed.
6. Update Program Counter: The program counter (PC) is updated to point to the next instruction in memory, allowing the CPU to fetch the subsequent instruction and repeat the process. The CPU repeats these steps continuously, fetching, decoding, executing, and updating the program counter until the program is complete.

Updated Text: In this exercise you will practice integer division and reinforce understanding of division operations with whole numbers. Instructions: 1. Divide the following pairs of numbers using integer division and write down the quotient (whole number result) without any remainders or decimals. a) $42 \div 9$ b) $10 \div 3$ c) $63 \div 5$ d) $17 \div 5$ 2. Solve the following word problems involving integer division. Write down the quotient as the answer. a) John has 75 apples that he wants to distribute equally among his 6 friends. How many apples will each friend receive? b) A box contains 64 chocolates, and they need to be divided equally into 7 smaller boxes. How many chocolates will each smaller box contain? c) A farmer has 90 eggs and wants to place them in cartons. Each carton can hold 7 eggs. How many cartons will the farmer need? 3.

Updated Text: A central processing unit (CPU) executes programs by performing a series of basic operations in a specific order. The CPU follows instructions provided by the program and carries out various tasks to perform calculations, manipulate data, and control the flow of the program. Here is a high-level overview of how a CPU runs or executes programs: 1. Fetch: The CPU fetches the next instruction from the program stored in memory. The program counter (PC) keeps track of the memory address of the next instruction to be executed. 2. Decode: The fetched instruction is decoded to determine the operation to be performed and the operands involved. The CPU's instruction set architecture defines the format and meaning of instructions. 3. Execute: The CPU executes the instruction by performing the required operation. This may involve arithmetic calculations, logical operations, data movement, or control flow instructions such as branches or jumps. 4. Memory Access: If the instruction requires accessing data from memory, the CPU fetches the data from or stores the data to the appropriate memory location. This step ensures that the CPU can read and write data as needed during program execution. 5. Write Back: After the instruction is executed, the results are written back to the appropriate registers or memory locations, depending on the operation performed. 6. Update Program Counter: The program counter (PC) is updated to point to the next instruction in memory, allowing the CPU to fetch the subsequent instruction and repeat the process. The CPU repeats these steps continuously, fetching, decoding, executing, and updating the program counter until the program is complete.

Updated Text: In this exercise you will practice integer division and reinforce understanding of division operations with whole numbers. Instructions: 1. Divide the following pairs of numbers using integer division and write down the quotient (whole number result) without any remainders or decimals. a) $42 \div 9$ b) $10 \div 3$ c) $63 \div 5$ d) $17 \div 5$ 2. Solve the following word problems involving integer division. Write down the quotient as the answer. a) John has 75 apples that he wants to distribute equally among his 6 friends. How many apples will each friend receive? b) A box contains 64 chocolates, and they need to be divided equally into 7 smaller boxes. How many chocolates will each smaller box contain? c) A farmer has 90 eggs and wants to place them in cartons. Each carton can hold 7 eggs. How many cartons will the farmer need? 3. Challenge: Solve the following division problem and write down the quotient without any remainders or decimals. a) $267 \div 9 =$

Updated Text: Exercise 1. Perform the modulus division operation and evaluate the given expression using the modulus operator (%). Calculate the remainder obtained when dividing the dividend by the divisor. Determine the result of the expression. Expression: $(83 + 7) \% 10$ Solution: Step 1: Add the numbers inside the parentheses. $83 + 7 = 90$ Step 2: Perform modulus division using the result from Step 1. $90 \% 10 = 0$ Exercise 2: Compute the value of $(24 + 12) \% 7$ using modulus division. Solution: Step 1: Add the values inside the parentheses: $24 + 12 = 36$. Step 2: Perform modulus division on the sum obtained in Step 1 by dividing it by 7 and finding the remainder: $36 \% 7 = 1$.

Updated Text: Peripheral Devices Peripheral computer devices are external hardware components that connect to a computer system to expand its capabilities and provide additional functionality. These devices interact with the computer system, allowing users to input, output, and store information. They enhance the overall user experience, allow users to perform tasks more efficiently, and enable the computer to interact with the external world.
