

DRAFT Proposed Revisions
Texas Essential Knowledge and Skills
Career and Technical Education (CTE)—Health Science

Prepared by the State Board of Education TEKS Review Committees

Final Recommendations, November 2014

These draft proposed revisions reflect the changes to the career and technical education (CTE) Texas Essential Knowledge and Skills (TEKS) that have been recommended by State Board of Education-appointed TEKS review committees for courses in the **Health Science Career Cluster**. Proposed additions are shown in green font with underlines (additions) and proposed deletions are shown in red font with strikethroughs (~~deletions~~).

Comments in the right-hand column provide explanations for the proposed changes. The following notations were used as part of the explanations:

CRS—information added or changed to align with the Texas College and Career Readiness Standards (CCRS)

MV—multiple viewpoints from within the committee

VA—information added, changed, or deleted to increase vertical alignment

§130.202. Principles of Health Science (One Half to One Credit).		
	TEKS with edits	Committee Comments
(a)	General requirements. This course is recommended for students in Grades 9-11 <u>9-10</u> .	Align with HB5
(b)	Introduction.	
(+)	The Principles of Health Science provides an overview of the therapeutic, diagnostic, health informatics, support services, and biotechnology research and development systems of the health care industry.	Consistency as a CTE group
<u>(1)</u>	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
<u>(2)</u>	<u>The Health Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostics services, health informatics, support services and biotechnology research and development.</u>	
<u>(3)</u>	<u>The Principles of Health Science course is designed to provide an overview of the therapeutic, diagnostic, health informatics, support services, and biotechnology research and development systems of the health care industry.</u>	
<u>(4)</u>	To pursue a career in the health science industry, students should learn to reason, think critically, make decisions, solve problems, and communicate effectively. Students should recognize that quality health care depends on the ability to work well with others.	
<u>(5)</u>	The health science industry is comprised of diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems that function individually and collaboratively to provide comprehensive health care. Students should identify the employment opportunities, technology, and safety requirements of each system. Students are expected to apply the knowledge and skills necessary to pursue a health science career through further education and employment.	
<u>(6)</u>	Professional integrity in the health science industry is dependent on acceptance of ethical and legal responsibilities. Students are expected to employ their ethical <u>responsibilities</u> and legal responsibilities, recognize limitations, and understand the implications of their actions.	
<u>(7)</u>	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
<u>(8)</u>	<u>Statements that contain the word “including”: reference content that must be mastered, while those containing the phrase “such as” are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
<u>(1)</u>	<u>The student demonstrates professional standards/employability as required by business and industry. The student is expected to:</u>	
<u>(A)</u>	<u>express ideas in a clear, concise, and effective manner;</u>	
<u>(B)</u>	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of a team; and</u>	

(C)	<u>identify employer expectations such as punctuality, attendance, time management, communication, organizational skills, and productive work habits.</u>	
(+)(2)	The student applies mathematics, science, English language arts, and social studies in health science. The student is expected to:	
(A)	convert units between systems of measurement;	
(B)	apply data from tables, charts, and graphs to provide solutions to health-related problems;	
(C)	interpret technical material related to the health science industry;	
(D)	organize, compile, and write ideas into reports and summaries;	
(E)	plan and prepare effective oral presentations;	
(F)	formulate responses using precise language to communicate ideas;	
(G)	describe biological and chemical processes that maintain homeostasis;	
(H)	identify and analyze principles of body mechanics and movement such as forces and the effects of movement, torque, tension, and elasticity on the human body;	
(I)	identify human needs according to Maslow's Hierarchy of Human Needs;	
(J)	describe the stages of development related to the life span;	
(K)	identify the concepts of health and wellness throughout the life span;	
(L)	analyze and evaluate communication skills for maintaining healthy relationships throughout the life span;	
(M)	research the historical significance of health care;	
(N)	describe the impact of health services on the economy;	
(O)	analyze the impact of local, state, and national government on the health science industry;	
(P)	identify diverse and cultural influences that have impacted contemporary aspects of health care delivery; and	
(Q)	<u>research and</u> compare and contrast practices used by various cultures and societies to solve problems related to health.	
(+)(3)	The student uses verbal and nonverbal communication skills. The student is expected to:	
(A)	identify components of effective and non-effective communication;	
(B)	demonstrate effective communication skills for responding to the needs of individuals in a diverse society;	
(C)	evaluate the effectiveness of conflict resolution techniques in various situations; and	

(D)	accurately interpret, transcribe, and communicate medical vocabulary using appropriate technology.	
(3) (4)	The student implements the leadership skills necessary to function in a democratic society. The student is expected to:	
(A)	identify traits of a leader;	
(B)	demonstrate leadership skills, characteristics, and responsibilities of leaders such as goal setting and team building; and	
(C)	demonstrate the ability to effectively conduct and participate in meetings.	
(4) (5)	The student assesses career options and the preparation necessary for employment in the health science industry. The student is expected to:	
(A)	locate, evaluate, and interpret career options and employment information; and	
(B)	recognize the impact of career decisions, including <u>the causes</u> and <u>effects</u> of changing employment situations.	
(5) (6)	The student identifies professional characteristics , academic preparation, and skills necessary for employment as defined by the health science industry. The student is expected to <u>identify academic requirements for professional advancement such as certification, licensure, registration, continuing education, and advanced degrees.</u>	
(A)	identify employer expectations such as punctuality, attendance, time management, communication, organizational skills, and productive work habits; and	
(B)	identify academic requirements for professional advancement such as certification, licensure, registration, continuing education, and advanced degrees.	
(6) (7)	The student identifies the systems <u>career clusters</u> related to health science. The student is expected to:	Change to more current wording
(A)	compare health science careers within the diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems; and	
(B)	identify the collaborative role of team members between systems to deliver quality health care.	
(7) (8)	The student examines the role of the multidisciplinary team in providing health care. The student is expected to:	
(A)	explain the concept of teaming to provide quality health care; and	
(B)	examine the role of professional organizations in the preparation and governance of credentialing and certification.	

(8) (9)	The student interprets ethical behavior standards and legal responsibilities. The student is expected to:	
(A)	compare published professional codes of ethics and scope of practice;	
(B)	explain principles of confidentiality and ethical behavior <u>and confidentiality</u> , including the consequences of breach of confidentiality;	clarity
(C)	discuss ethical issues related to health care, including implications of technological advances;	
(D)	examine issues related to malpractice, negligence, and liability; and	
(E)	research laws governing the health science industry.	
(9) (10)	The student recognizes the rights and choices of the individual. The student is expected to:	
(A)	recognize situations related to autonomy;	
(B)	identify wellness strategies for the prevention of disease;	
(C)	evaluate positive and negative effects of relationships on physical and emotional health such as peers, family, and friends and in promoting a healthy community;	
(D)	review documentation related to rights and choices; and	
(E)	recognize diversity and cultural practices influencing contemporary aspects of health care.	
(10) (11)	The student recognizes the importance of maintaining a safe environment and eliminating hazardous situations. The student is expected to:	
(A)	identify governing regulatory agencies such as the World Health Organization, Centers for Disease Control <u>and Prevention</u> , Occupational Safety and Health Administration, <u>United States</u> Food and Drug Administration, <u>Joint Commission</u> and National Institute of <u>for</u> Occupational Safety and Health ;	NIOSH is part of CDC, and added NIH and JC to update current agency names
(B)	Relate <u>identifies</u> industry safety standards such as standard precautions, fire prevention, safety practices, and appropriate actions to emergency situations; and	clarification
(C)	identify <u>relate</u> safety practices in all aspects of the health science industry.	Too broad
(11) (12)	The student identifies the technology used in the diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems. The student is expected to:	
(A)	<u>research and</u> identify technological equipment used in each of the five systems and relate findings to identified societal risk factors; and	Too specific
<u>(B)</u>	<u>identify potential malfunctions of technological equipment; and</u>	
(B) (C)	recognize and relate the process for reporting equipment or technology malfunctions.	

DRAFT

§130.203. Medical Terminology (One-Half Credit).

TEKS with edits		Committee Comments
(a)	General requirements. This course is recommended for students in Grades 9-12.	Credit comment: The TEKS have been streamlined with the expectation that each TEK will be addressed in the following body systems: Skeletal, integumentary, muscular, nervous, cardiovascular, endocrine, respiratory, lymphatic, urinary, digestive, male reproductive, female reproductive and special senses.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostics services, health informatics, support services and biotechnology research and development.</u>	
(3)	This course <u>The Medical Terminology course</u> is designed to introduce students to the structure of medical terms, including prefixes, suffixes, word roots, combining forms, and singular and plural forms, plus medical abbreviations and acronyms. The course allows students to achieve comprehension of medical vocabulary appropriate to medical procedures, human anatomy and physiology, and pathophysiology.	Sentence structure
(4)	To pursue a career in health science, students should learn to reason, think critically, make decisions, solve problems, and communicate effectively. Students should understand that quality health care depends on the ability to work well with others.	
(5)	The health science industry is comprised of diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems that function individually and collaboratively o provide comprehensive health care. Students should identify the employment opportunities, technology, and safety requirements of each system. Students are expected to learn the knowledge and skills necessary to pursue a health science career through further education and employment.	
(6)	Professional integrity in the health science industry is dependent on acceptance of ethical and legal responsibilities. Students are expected to employ their ethical <u>responsibilities</u> and legal responsibilities, recognize limitations, and understand the implications of their actions.	
(7)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(8)	<u>Statements that contain the word “including” reference content that must be mastered, while those containing the phrase “such as” are intended as possible illustrative examples.</u>	

(c)	Knowledge and skills.	
<u>(1)</u>	<u>The student demonstrated professional standards/employability skills as required by business and industry. The student is expected to:</u>	
<u>(A)</u>	<u>express ideas in a clear, concise, and effective manner; and</u>	
<u>(B)</u>	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of a team.</u>	
(1) <u>(2)</u>	The student recognizes the terminology related to the health science industry. The student is expected to:	
(A)	identify abbreviations, acronyms, and symbols;	
(B)	identify the basic structure of medical words;	
(C)	practice word-building skills;	
(D)	research the origins of eponyms;	
(E)	recall directional terms and anatomical planes related to body structure; and	Added a new TEK to the section
(F)	define and accurately spell occupationally specific terms such as those relating to the body systems, surgical and diagnostic procedures, diseases, and treatment; <u>and</u>	
<u>(G)</u>	<u>use prior knowledge and experiences to understand the meaning of terms as they related to the health science industry.</u>	<u>Knowledge acquisition skill</u>
(2) <u>(3)</u>	The student demonstrates communication skills using the terminology applicable to the health science industry. The student is expected to:	
(A)	demonstrate appropriate verbal and written strategies such as correct pronunciation of medical terms and spelling in a variety of health science scenarios;	
(B)	employ increasingly precise language to communicate; and	
(C)	translate technical material related to the health science industry.	
(3) <u>(4)</u>	The student examines available resources. The student is expected to:	
(A)	examine medical and dental dictionaries and multimedia resources;	
(B)	integrate resources to interpret technical materials; and	
(C)	investigate electronic media such as the Internet with appropriate supervision.	To update verbiage
(4) <u>(5)</u>	The student interprets medical abbreviations. The student is expected to:	
(A)	distinguish medical abbreviations used throughout the health science industry; and	
(B)	translate medical abbreviations in simulated technical material such as physician progress notes, radiological reports, and laboratory reports.	

(5) (6)	The student appropriately translates health science industry terms. The student is expected to:	
(A)	interpret, transcribe, and communicate vocabulary related to the health science industry;	
(B)	translate medical terms to conversational language to facilitate communication;	
(C)	distinguish medical terminology associated with medical specialists such as geneticists, pathologists, and oncologists;	
(D)	summarize observations using medical terminology; and	
(E)	correctly interpret contents of medical scenarios.	

DRAFT

§130.204. Health Science (One to Two Credits).		
	TEKS with edits	Committee Comments
(a)	General requirements. This course is recommended for students in Grades 10-12. Recommended p Prerequisites: Principles of Health Science and Biology.	HB5 and change in credits and coherent sequence. This course can stand alone.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	Consistency as a CTE group
(3)	The Health Science course is designed to provide for the development of advanced knowledge and skills related to a wide variety of health careers. Students will have employ hands-on experiences for continued knowledge and skill development. The course may be taught by different methodologies such as clinical rotation and career preparation learning.	Gives description of pathway
(2) (4)	To pursue a career in the health science industry, students should recognize, learn to reason, think critically, make decisions, solve problems, and communicate effectively. Students should recognize that quality health care depends on the ability to work well with others.	Moved to align with to align with other CTE courses and is the description of this course. To be used in the clinical setting not in the theory side
(3) (5)	The health science industry is comprised of diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems that function individually and collaboratively to provide comprehensive health care. Students should identify the employment opportunities, technology, and safety requirements of each system. Students are expected to apply the knowledge and skills necessary to pursue a health science career through further education and employment.	Moved to align with other CTE course introductions
(4) (6)	Professional integrity in the health science industry is dependent on acceptance of ethical and legal responsibilities. Students are expected to employ their ethical <u>responsibilities</u> and legal responsibilities, recognize limitations, and understand the implications of their actions.	Wording
(7)	<u>Students are expected to apply the knowledge and skills obtained through the course in the appropriate career and technical student organization.</u>	
(8)	<u>Statements that contain the word “including” reference content that must be mastered, while those containing the phrase “such as” are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as requires by business and industry. The student is expected to:</u>	

(A)	<u>express ideas in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of a team.</u>	
(2)	The student applies mathematics, science, English language arts, and social studies in health science. The student is expected to:	
(A)	solve mathematical calculations appropriate to situations in a health-related environment;	
(B)	communicate using medical terminology;	
(C)	express ideas in writing and develop skills in documentation;	
(D)	interpret complex technical material related to the health science industry;	
(E)	summarize biological and chemical processes that maintain homeostasis;	
(F)	explain the changes in structure and function due to trauma and disease; and	
(G)	research the global impact of disease prevention and cost containment.	
(3)	The student displays verbal and non-verbal communication skills. The student is expected to:	
(A)	demonstrate therapeutic communication appropriate to the situation;	
(B)	execute verbal and nonverbal skills when communicating with persons with sensory loss and language barriers <u>in a simulated setting</u> ; and	Update current verbiage
(C)	Apply <u>utilize</u> electronic communication with appropriate supervision <u>in the classroom setting, such as facsimile, scanner, electronic mail, and telephone.</u>	Clarify
(4)	The student analyzes and evaluates communication skills for maintaining healthy relationships throughout the life span. The student is expected to:	
(A)	evaluate how a <u>healthy relationships</u> influences <u>career goals</u> ;	Verbiage
(B)	demonstrate communication skills in building and maintaining healthy relationships;	
(C)	demonstrate strategies for communicating needs, wants, and emotions; and	
(D)	evaluate the effectiveness of conflict resolution techniques in various <u>simulated</u> situations.	Change to reflect theory class

(5)	The student relates appropriate information in the classroom to the proper authority <u>in a simulated classroom setting</u> . The student is expected to:	Change to reflect theory class
(A)	identify and retrieve reportable information; and	
(B)	R report <u>simulated</u> information according to facility policy.	Change to reflect theory class
(6)	The student identifies documents integrated into the permanent record of the health informatics system. The student is expected to:	
(A)	describe <u>research</u> document formats; and	
(B)	compile and record data according to regulatory agency policy <u>industry based standards</u> .	
(7)	The student describes academic requirements necessary for employment in the health science industry. The student is expected to:	
(A)	research specific health science careers; and	
(B)	review employment procedures for a specific health science career.	
(8)	The student identifies problems and participates in the decision-making process. The student is expected to:	
(A)	analyze systematic procedures for problem solving;	
(B)	evaluate the impact of decisions; and	
(C)	suggest modifications based on decision outcomes.,	
(9)	The student implements the knowledge and skills of a health science professional in the clinical <u>classroom</u> setting. The student is expected to:	Change to reflect theory class
(A)	comply with specific industry standards related to safety and substance abuse;	
(B)	model industry expectations of professional conduct such as attendance, punctuality, personal appearance, hygiene, and time management;	
(C)	articulate comprehension of assignment;	
(D)	employ medical vocabulary specific to the health-care setting;	
(E)	perform admission, discharge, and transfer functions in a simulated setting;	

(F)	demonstrate skills related to activities of daily living in rehabilitative care such as range of motion, positioning, and ambulation according to the health science industry standards, regulatory agency standards, and professional guidelines;	
(G)	role play techniques used in stressful situations such as trauma, chronic, and terminal illness;	
(H)	demonstrate first aid, vital signs, cardiopulmonary resuscitation, and automated external defibrillator skills in a laboratory setting; and	
(I)	perform skills specific to a health science professional such as medical assistant, dental assistant, emergency medical technician-basic, phlebotomy technician, and pharmacy technician.	
(10)	The student evaluates ethical behavioral standards and legal responsibilities. The student is expected to:	
(A)	research and describe the role of professional associations and regulatory agencies;	
(B)	examine legal and ethical behavior standards such as Patient Bill of Rights, Advanced Directives, and the Health Insurance Portability and Accountability Act;	
(C)	investigate the legal and ethical ramifications of unacceptable behavior; and	
(D)	perform within the designated scope of practice.	Not related to theory class
(11)	The student exhibits the leadership skills necessary to function in a democratic society. The student is expected to:	
(A)	identify leadership skills of health science professionals;	
(B)	participate in group dynamics; and	
(C)	integrate consensus-building techniques.	
(12)	The student maintains a safe environment. The student is expected to:	
(A)	conform to governmental regulations and guidelines from entities such as the World Health Organization, Centers for Disease Control <u>and Prevention</u> , Occupational Safety and Health Administration, <u>United States</u> Food and Drug Administration, <u>Joint Commission</u> , and National Institute for Occupational Safety and <u>of</u> Health;	NIOSH part of CDC, Added NIH and JC and Unites States to reflect current agencies
(B)	explain protocol related to hazardous materials and situations such as material safety data sheets;	Clarity and teacher flexibility
(C)	observe and report unsafe conditions; and	

(D)	Practie <u>support</u> recycling and waste management for cost containment and environmental protection.	Higher level of Bloom's taxonomy
(13)	The student assesses wellness strategies for the prevention of disease. The student is expected to:	
(A)	research wellness strategies for the prevention of disease;	
(B)	evaluate positive and negative effects of relationships on physical and emotional health such as peers, family, and friends;	Clarity and flexibility
(C)	explain the benefits of positive relationships among community health professionals in promoting a healthy community;	
(D)	examine <u>research and analyze the effects of</u> access to quality health care; and	Clarity
(E)	research alternative health practices and therapies.	

DRAFT

Health Science Clinical (One Credit).		
	TEKS with edits	Committee Comments
(a)	General requirements. <u>This course is recommended for students in Grades 10-12. Prerequisites: Biology and Principles of Health Science. Course must be taken concurrently with Health Science Theory. Students will earn 2 credits after successful completion of both courses.</u>	Must be taken concurrently with Health Science, not a stand-alone course. Intended to be blocked together.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(3)	<u>The Health Science Clinical course is designed to provide for the development of advanced knowledge and skills related to a wide variety of health careers. Students will employ hands-on experiences for continued knowledge and skill development.</u>	
(4)	<u>To pursue a career in the health science industry, students should recognize, learn to reason, think critically, make decisions, solve problems, and communicate effectively. Students should recognize that quality health care depends on the ability to work well with others.</u>	
(5)	<u>The health science industry is comprised of diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems that function individually and collaboratively to provide comprehensive health care. Students should identify the employment opportunities, technology, and safety requirements of each system. Students are expected to apply the knowledge and skills necessary to pursue a health science career through further education and employment.</u>	
(6)	<u>Professional integrity in the health science industry is dependent on acceptance of ethical and legal responsibilities. Students are expected to employ their ethical responsibilities, legal responsibilities, recognize limitations, and understand the implications of their actions.</u>	
(7)	<u>Students are encouraged to participate in extended learning experiences, such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(8)	<u>Statements that contain the word “including” reference content that must be mastered, while those containing the phrase “such as” are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as requires by business and industry. The student is expected to:</u>	
(A)	<u>express ideas in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of a team.</u>	

(2)	<u>The student applies mathematics, science, English language arts, and social studies in health science. The student is expected to:</u>	
(A)	<u>solve mathematical calculations appropriate to situations in a health-related environment;</u>	
(B)	<u>communicate using medical terminology;</u>	
(C)	<u>express ideas in writing and develop skills in documentation;</u>	
(D)	<u>interpret complex technical material related to the health science industry;</u>	
(E)	<u>summarize biological and chemical processes that maintain homeostasis;</u>	
(F)	<u>explain the changes in structure and function due to trauma and disease; and</u>	
(G)	<u>research the global impact of disease prevention and cost containment.</u>	
(3)	<u>The student displays verbal and non-verbal communication skills. The student is expected to:</u>	
(A)	<u>demonstrate therapeutic communication appropriate to the situation;</u>	
(B)	<u>execute verbal and nonverbal skills when communicating with persons with sensory loss and language barriers; and</u>	
(C)	<u>utilize electronic communication with appropriate supervision such as facsimile, scanner, electronic mail, and telephone..</u>	
(4)	<u>The student analyzes and evaluates communication skills for maintaining healthy relationships throughout the life span. The student is expected to:</u>	
(A)	<u>evaluate how a healthy relationship influences career goals;</u>	
(B)	<u>demonstrate communication skills in building and maintaining healthy relationships;</u>	
(C)	<u>demonstrate strategies for communicating needs, wants, and emotions; and</u>	
(D)	<u>evaluate the effectiveness of conflict resolution techniques in various practical situations.</u>	
(5)	<u>The student relates appropriate information in the practical setting to the proper authority. The student is expected to:</u>	
(A)	<u>identify and retrieve reportable information; and</u>	
(B)	<u>report information according to facility policy in the practical setting.</u>	
(6)	<u>The student identifies documents integrated into the permanent record of the health informatics system. The student is expected to:</u>	
(A)	<u>research and describe document formats; and</u>	
(B)	<u>compile and record data according to industry based standards..</u>	

<u>(7)</u>	<u>The student describes academic requirements necessary for employment in the health science industry. The student is expected to:</u>	
<u>(A)</u>	<u>research specific health science careers; and</u>	
<u>(B)</u>	<u>review employment procedures for a specific health science career.</u>	
<u>(8)</u>	<u>The student identifies problems and participates in the decision-making process. The student is expected to:</u>	
<u>(A)</u>	<u>analyze systematic procedures for problem solving;</u>	
<u>(B)</u>	<u>evaluate the impact of decisions; and</u>	
<u>(C)</u>	<u>suggest modifications based on decision outcomes.</u>	
<u>(9)</u>	<u>The student implements the knowledge and skills of a health science professional in the clinical setting. The student is expected to:</u>	
<u>(A)</u>	<u>comply with specific industry standards related to safety and substance abuse;</u>	
<u>(B)</u>	<u>model industry expectations of professional conduct such as attendance, punctuality, personal appearance, hygiene, and time management;</u>	
<u>(C)</u>	<u>articulate comprehension of assignment;</u>	
<u>(D)</u>	<u>employ medical vocabulary specific to the health-care setting;</u>	
<u>(E)</u>	<u>perform admission, discharge, and transfer functions in a simulated setting;</u>	
<u>(F)</u>	<u>demonstrate skills related to activities of daily living in rehabilitative care such as range of motion, positioning, and ambulation according to the health science industry standards, regulatory agency standards, and professional guidelines;</u>	
<u>(G)</u>	<u>role play techniques used in stressful situations such as trauma, chronic, and terminal illness;</u>	
<u>(H)</u>	<u>demonstrate first aid, vital signs, cardiopulmonary resuscitation, and automated external defibrillator skills in a laboratory setting; and</u>	
<u>(I)</u>	<u>perform skills specific to a health science professional such as medical assistant, dental assistant, emergency medical technician-basic, phlebotomy technician, and pharmacy technician.</u>	
<u>(10)</u>	<u>The student evaluates ethical behavioral standards and legal responsibilities. The student is expected to:</u>	
<u>(A)</u>	<u>research and describe the role of professional associations and regulatory agencies;</u>	
<u>(B)</u>	<u>examine legal and ethical behavior standards such as Patient Bill of Rights, Advanced Directives, and the Health Insurance Portability and Accountability Act;</u>	
<u>(C)</u>	<u>investigate the legal and ethical ramifications of unacceptable behavior; and</u>	

(D)	<u>perform within the designated scope of practice.</u>	
(11)	<u>The student exhibits the leadership skills necessary to function in a democratic society. The student is expected to:</u>	
(A)	<u>identify leadership skills of health science professionals;</u>	
(B)	<u>participate in group dynamics; and</u>	
(C)	<u>integrate consensus-building techniques.</u>	
(12)	<u>The student maintains a safe environment. The student is expected to:</u>	
(A)	<u>conform to governmental regulations and guidelines from entities such as the World Health Organization, Centers for Disease Control and Prevention, Occupational Safety and Health Administration, United States Food and Drug Administration, Joint Commission, and National Institute of Health;</u>	
(B)	<u>explain protocol related to hazardous materials and situations such as material safety data sheets;</u>	
(C)	<u>observe and report unsafe conditions; and</u>	
(D)	<u>Practice recycling and waste management for cost containment and environmental protection.</u>	
(13)	<u>The student assesses wellness strategies for the prevention of disease. The student is expected to:</u>	
(A)	<u>research wellness strategies for the prevention of disease;</u>	
(B)	<u>evaluate positive and negative effects of relationships on physical and emotional health</u>	
(C)	<u>explain the benefits of positive relationships among community health professionals in promoting a healthy community;</u>	
(D)	<u>research and analyze access to quality health care; and</u>	
(E)	<u>research alternative health practices and therapies.</u>	

§130.206. Anatomy and Physiology (One ~~Science~~ Credit).

TEKS with edits		Committee Comments
(a)	<p>General requirements. This course is recommended for students in Grades 10 -12. Recommended pPrerequisites: three <u>two</u> credits of science. <u>Recommended prerequisite: One Health Science credit.</u> <u>This course satisfies a high school science graduation requirement.</u> To receive credit in science, students must meet the 40% laboratory and fieldwork requirement identified in §74.3(b)(2)(C) of this title (relating to Description of a Required Secondary Curriculum).</p>	HB 5 and coherent sequence for Health Science;
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(1) (3)	Anatomy and Physiology. In Anatomy and Physiology, <u>The Anatomy and Physiology course is designed for</u> students to conduct laboratory and field investigations, use scientific methods during investigations, and make informed decisions using critical thinking and scientific problem solving. Students in Anatomy and Physiology study a variety of topics, including the structure and function of the human body and the interaction of body systems for maintaining homeostasis.	
(2) (4)	Nature of science. Science, as defined by the National Academy of Sciences, is the "use of evidence to construct testable explanations and predictions of natural phenomena, as well as the knowledge generated through this process." This vast body of changing and increasing knowledge is described by physical, mathematical, and conceptual models. Students should know that some questions are outside the realm of science because they deal with phenomena that are not scientifically testable.	
(3) (5)	Scientific inquiry. Scientific inquiry is the planned and deliberate investigation of the natural world. Scientific methods of investigation are experimental, descriptive, or comparative. The method chosen should be appropriate to the question being asked.	
(4) (6)	Science and social ethics. Scientific decision making is a way of answering questions about the natural world. Students should be able to distinguish between scientific decision-making methods (scientific methods) and ethical and social decisions that involve science (the application of scientific information).	
(5) (7)	Science, systems, and models. A system is a collection of cycles, structures, and processes that interact. All systems have basic properties that can be described in space, time, energy, and matter. Change and constancy occur in systems as patterns and can be observed, measured, and modeled. These patterns help to make predictions that can be scientifically tested. Students should analyze a system in terms of its components and how these components relate to each other, to the whole, and to the external environment.	

(8)	<u>Students are expected to apply the knowledge and skills obtained through the course in the appropriate career and technical student organization.</u>	
(9)	<u>Statements that contain the word “including” reference content that must be mastered, while those containing the phrase “such as” are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skill as required by business and industry. The student is expected to:</u>	Employability skills needed across CTE
(A)	<u>express ideas in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of a team.</u>	
(+) (2)	The student conducts investigations, for at least 40% of instructional time, using safe, environmentally appropriate, and ethical practices. These investigations must involve actively obtaining and analyzing data with physical equipment, but may also involve experimentation in a simulated environment as well as field observations that extend beyond the classroom. The student is expected to:	
(A)	demonstrate safe practices during laboratory and field investigations; and	
(B)	demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials.	
(±) (3)	The student uses scientific methods and equipment during laboratory and field investigations. The student is expected to:	
(A)	know the definition of science and understand that it has limitations, as specified in subsection (b)(2) of this section;	
(B)	know that hypotheses are tentative and testable statements that must be capable of being supported or not supported by observational evidence. Hypotheses of durable explanatory power which have been tested over a wide variety of conditions are incorporated into theories; <u>understand hypotheses are tentative but testable explanations capable of being supported or not supported by observational evidence. Hypotheses validated by repeated investigation and consistency of results can be incorporated into theories;</u>	Per recommendation of science committee
(C)	know scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are well-established and highly reliable explanations, but they may be subject to change as new areas of science and new technologies are developed; <u>know scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are experimentally supported through rigorous testing methods, but they may be subject to change as new areas of science are created and new technologies emerge;</u>	Per recommendation of science committee

(D)	distinguish between scientific hypotheses and scientific theories;	Per recommendation of science committee
(E)	plan and implement descriptive, comparative, and experimental investigations, including asking questions, formulating testable hypotheses, and selecting equipment and technology;	
(F)	collect and organize qualitative and quantitative data and make measurements with accuracy and precision using tools such as calculators, spreadsheet software, data-collecting probes, computers, standard laboratory glassware, microscopes, various prepared slides, stereoscopes, metric rulers, electronic balances, hand lenses, Celsius thermometers, hot plates, lab notebooks or journals, timing devices, Petri dishes, lab incubators, dissection equipment, meter sticks, and models, diagrams, or samples of biological specimens or structures;	
(G)	analyze, evaluate, make inferences, and predict trends from data; and	
(H)	communicate valid conclusions supported by the data through methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports.	
⊕ (4)	The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom. The student is expected to:	
(A)	in all fields of science, analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing, including examining all sides of scientific evidence of those scientific explanations, so as to encourage critical thinking by the student;	
(B)	communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials;	
(C)	draw inferences based on data related to promotional materials for products and services;	
(D)	evaluate the impact of scientific research on society and the environment;	
(E)	evaluate models according to their limitations in representing biological objects or events; and	
(F)	research and describe the history of science and contributions of scientists.	
⊕ (5)	The student evaluates the energy needs of the human body and the processes through which these needs are fulfilled. The student is expected to:	
(A)	analyze the chemical reactions that provide energy for the body;	
(B)	evaluate the means, including the structure and function of the digestive system, by which energy is processed and stored within the body;	

(C)	analyze the effects of energy deficiencies in malabsorption disorders <u>as it relates to body systems such as diabetes, hypothyroidism, and Crohn's disease; and such as Crohn's disease and cystic fibrosis.</u>	Consistency and flexibility. Added as recommended by science committee
(D)	analyze the effects of energy excess in disorders <u>as it relates to body systems such as obesity as it relates to cardiovascular and musculoskeletal systems; such cardiovascular, endocrine, muscular, skeletal, and pulmonary.</u>	Consistency and flexibility. Added as recommended by science committee
(5) (6)	The student differentiates the responses of the human body to internal and external forces. The student is expected to:	
(A)	explain the coordination of muscles, bones, and joints that allows movement of the body;	
(B)	investigate and report the uses of various diagnostic and therapeutic technologies;	
(C)	interpret normal and abnormal contractility conditions such as in edema, glaucoma, aneurysms, and hemorrhage;	
(D)	analyze and describe the effects of pressure, movement, torque, tension, and elasticity on the human body; and	
(E)	perform an investigation to determine causes and effects of force variance and communicate findings.	
(6) (7)	The student examines the body processes that maintain homeostasis. The student is expected to:	
(A)	investigate and describe the integration of the chemical and physical processes, including equilibrium, temperature, pH balance, chemical reactions, passive transport, active transport, and biofeedback, that contribute to homeostasis; and	
(B)	determine the consequences of the failure to maintain homeostasis.	
(7) (8)	The student examines the electrical conduction processes and interactions. The student is expected to:	
(A)	illustrate conduction systems such as nerve transmission or muscle stimulation;	
(B)	investigate the therapeutic uses and effects of external sources of electricity on the body system; and	
(C)	evaluate the application of advanced technologies such as electroencephalogram, electrocardiogram, bionics, transcutaneous electrical nerve stimulation, and cardioversion.	
(8) (9)	The student explores the body's transport systems. The student is expected to:	
(A)	analyze the physical, chemical, and biological properties of transport systems, including circulatory, respiratory, and excretory;	
(B)	determine the factors that alter the normal functions of transport systems; and	

(C)	contrast the interactions among the transport systems.	
(9) (10)	The student investigates environmental factors that affect the human body. The student is expected to:	
(A)	identify the effects of environmental factors such as climate, pollution, radioactivity, chemicals, electromagnetic fields, pathogens, carcinogens, and drugs on body systems; and	
(B)	explore measures to minimize harmful environmental factors on body systems.	
(10) (11)	The student investigates structure and function of the human body. The student is expected to:	
(A)	analyze the relationships between the anatomical structures and physiological functions of systems, including the integumentary, nervous, skeletal, musculoskeletal , <u>muscular</u> , cardiovascular, respiratory, , gastrointestinal <u>digestive, urinary, immune, special senses</u> , endocrine, and reproductive;	
(B)	evaluate the cause and effect of disease, trauma, and congenital defects on the structure and function of cells, tissues, organs, and systems;	
(C)	research technological advances and limitations in the treatment of system disorders; and	
(D)	examine characteristics of the aging process on body systems.	
(11) (12)	The student describes the process of reproduction and growth and development. The student is expected to:	
(A)	explain embryological development of <u>cells</u> , tissues, organs, and systems;	
(B)	identify the functions of the male and female reproductive systems; and	
(C)	summarize the human growth and development cycle.	
(12) (13)	The student recognizes emerging technological advances in science. The student is expected to:	
(A)	recognize advances in stem cell research such as cord blood utilization; and	
(B)	recognize advances in bioengineering and transplant technology.	

Mathematics for Medical Professionals (One Credit)

TEKS with edits		Committee Comments
(a)	<u>General requirements. This course is recommended for student in Grades 11-12. Prerequisite: Geometry and Algebra 2. This course meets a mathematics credit requirement for high school.</u>	
(b)	<u>Introduction.</u>	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(3)	<u>The Mathematics for Medical Professionals course is designed to serve as the driving force behind the Texas Essential Knowledge and Skills for mathematics, guided by the College and Career Readiness Standards. By embedding statistics, probability, and finance, while focusing on fluency and solid understanding in medical mathematics, students will extend and apply mathematical skills necessary for health science professions. Course content consists primarily of high school level mathematics concepts and their applications to health science professions.</u>	
(4)	<u>Students will demonstrate high levels of mathematical thought through hands-on experiences which extend beyond traditional computation, algebra, and geometry and out to all health science professions. Students will use critical thinking, scientific reasoning and problem solving with the aid of technology to make informed decisions within and outside the classroom. Essential to this course is the partnership between mathematics and health science teachers.</u>	
(5)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(6)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(c)	<u>Knowledge and skills.</u>	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	
(A)	<u>express ideas in a clear, concise, and effective manner;</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of a team; and</u>	
(C)	<u>demonstrate adaptability skills such as problem solving and creative thinking.</u>	
(2)	<u>Mathematics process standards. The student uses mathematical processes to acquire and demonstrate mathematical understanding. The student is expected to:</u>	
(A)	<u>apply mathematics to problems arising in health science professions;</u>	

(B)	<u>use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution;</u>	
(C)	<u>select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems in health science professions;</u>	
(D)	<u>communicate mathematical ideas, reasoning, and their implications to the health science field using multiple representations, including symbols, diagrams, graphs, and language as appropriate;</u>	
(E)	<u>create and use representations to organize, record, and communicate mathematical ideas in health science professions;</u>	
(F)	<u>analyze mathematical relationships to connect and communicate mathematical ideas in health science professions; and</u>	
(G)	<u>display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication as it applies to health science professions.</u>	
(3)	<u>Numeric Reasoning. The student generates deeper mathematical understandings through problems involving numerical data that arise in health science professions. The student extends existing knowledge and skills to analyze real-world clinical situations. The student is expected to:</u>	
(A)	<u>add, subtract, multiply and divide rational numbers fluently in problem-solving situations related to health science professions;</u>	
(B)	<u>keep track of and manage inventory using the “first in last out” concept;</u>	
(C)	<u>solve health science related problems involving ratios, rates, and percent accurately and precisely, including lab analysis, body fluid analysis, vital signs, medication dosages and administration, growth charts, body surface area, parenteral solutions and data collection related to homeostasis;</u>	
(D)	<u>learn to read and use military time fluently for health science situations, including medication administration, scheduling, and documentation;</u>	
(E)	<u>apply appropriate estimation techniques used in health science professions to estimate percent and then confirm those estimates with calculations; and</u>	
(F)	<u>read and determine accurate numerical value of Roman numerals as used in the health science professions including cranial nerves.</u>	
(4)	<u>Algebraic Reasoning. The student applies the process standards in mathematics to create and analyze mathematical models of health science situations to make informed decisions related to improved healthcare outcomes by appropriate, proficient, and efficient use of tools, including technology. The student judges the validity of a prediction and uses mathematical models to represent, analyze, and solve dynamic healthcare problems. The student is expected to:</u>	

(A)	<u>collect data to create a scatterplot and apply various functions to model the data in an effort to interpret results and make predictions in health science situations, such as interpreting growth charts, interpreting disease and mortality rates, diagnosing and determining treatment modalities;</u>	
(B)	<u>create, represent, and analyze appropriate mathematical functions, (such as linear, quadratic, exponential, logarithmic and sinusoidal functions), used to model, interpret and predict situations which occur in health science professions, such as supply and demand, inventory control, and cost analysis within clinical situations;</u>	
(C)	<u>determine or analyze an appropriate sinusoidal model for health science situations that can be modeled with periodic functions, including those related to EKG's, repolarization of the heart, and medication dosage and administration;</u>	
(D)	<u>write and solve systems of equations, especially those representing mixtures, which apply to health science situations, including IV solutions and medication dosages;</u>	
(E)	<u>use properties of logarithmic and exponential functions to solve equations related to health science situations, such as determining the pH of a solution, the concentration of H⁺ concentration given the pH, calculating the absorbance and transmittance, and determining exponential growth and decay; and</u>	
(F)	<u>calculate accurate and precise unit rates used in health science situations.</u>	
(5)	<u>Measurement. The student applies mathematical process standards to obtain accurate and precise measurements. The student is expected to:</u>	
(A)	<u>define each of the health science professions which require a unique set of measurement/calculation standards, and explain/identify the importance of each measurement system (apothecary, metric, household system);</u>	
(B)	<u>explain the necessity of obtaining accurate measurements in the health science professions;</u>	
(C)	<u>use dimensional analysis with precision and accuracy in performing unit conversions from one measurement system to another, including the use of proportions and unit rates in pharmacology;</u>	
(D)	<u>classify the specific system to which a given unit belongs, and explain its similarity, or differences, to units in other measurement systems;</u>	
(E)	<u>select and use appropriate measurement tools used in health science professions to obtain accurate and precise measurements such as rulers, tape measures, thermometers, syringes, gauge and lumen size, scales, and sphygmomanometer gauges; and</u>	
(F)	<u>select and use appropriate measurement techniques used in health science professions to obtain accurate and precise measurements including determining measures for medication, nutrition, fluids, and homeostasis.</u>	
(6)	<u>Data and Statistics. The student applies mathematical process standards to analyze statistical information used in health science professions. The student is expected to:</u>	

(A)	<u>obtain and analyze lab reports to evaluate if values lie outside normal parameters;</u>	
(B)	<u>obtain and analyze vital signs by comparing to normal parameters;</u>	
(C)	<u>calculate and apply measures of central tendency in application problems in the health science field;</u>	
(D)	<u>understand the significance of the normal distribution;</u>	
(E)	<u>understand and apply the Empirical Rule to find probabilities from normal distributions;</u>	
(F)	<u>calculate and use the z-score to calculate standard deviation of a normal distribution using a formula;</u>	
(G)	<u>calculate the percentile rank for a given score using a formula;</u>	
(H)	<u>describe characteristics of well-designed and well conducted experiments, observational studies, and surveys in the health science field, including the ethical issues associated with each;</u>	
(I)	<u>distinguish between populations and samples;</u>	
(J)	<u>explain placebo and placebo effect; and</u>	
(K)	<u>define epidemiology and its extension of statistical procedures to public health issues.</u>	
(7)	<u>Geometric Reasoning. The student applies mathematical process standards to solve geometric problems arising in health science professions. The student is expected to:</u>	
(A)	<u>use formulas and geometric reasoning to calculate volumes of various liquids and solids encountered in health science professions, including irregular shaped solids;</u>	
(B)	<u>use formulas and geometric reasoning to calculate surface area of various surfaces encountered in health science professions, including body surface area;</u>	
(C)	<u>use geometric reasoning to calculate appropriate angles encountered in health science professions, such as medication administration, body positioning, and physical therapy; and</u>	
(D)	<u>use a goniometer to calculate and analyze range of motion.</u>	

§130.209. World Health Research (One Credit).		
TEKS with edits		Committee Comments
(a)	General requirements. This course is recommended for students in Grades 11-12. Recommended prerequisites: Biology and Chemistry. <u>Prerequisite: a course in the Health Science Career Cluster, Biology, and Chemistry.</u>	Required prerequisites – change needs to be made to prevent counselors from putting students in the class out of sequence because of recommended prerequisites wording. Principles of Health Science or Medical Terminology and Health Science need to be added to ensure sequence of course followed.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(3)	This course examines <u>The World Health Research is a course designed to examine</u> major world health problems and emerging technologies as solutions to these medical concerns. It is designed to improve students' understanding of the cultural, infrastructural, political, educational, and technological constraints and inspire ideas for appropriate technological solutions to global medical care issues.	
(4)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(5)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	
(A)	<u>demonstrate verbal and non-verbal communication in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of team.</u>	
(+)(2)	The student explores and discusses current major human health problems in the world. The student is expected to:	
(A)	describe the pathophysiology of the three leading causes of death in developing and developed countries;	

(B)	discuss history of diseases and the evolution of medical technology over time;	
(C)	contrast health problems in developing and developed countries;	
(D)	describe the function of the World Health Organization;	
(E)	define and calculate incidence, morbidity, and mortality; and	
(F)	identify and describe the challenges in global health, which can have the greatest impact on health in developing nations.	
(2) (3)	The student explains who pays for health care in the world today. The student is expected to:	
(A)	compare the availability of health care in developing and developed countries;	
(B)	discuss and contrast the four basic health care system models such as the Beveridge Model, Bismarck Model, National Health Insurance Model, and the Out-of-Pocket Model;	
(C)	explain how countries such as the United Kingdom, Japan, Germany, Taiwan, Switzerland, and the United States of America pay for health care;	
(D)	describe how health care expenditures have changed over time; and	
(E)	identify the major contributors to the rising health science industry costs.	
(3) (4)	The student describes the engineering technologies developed to address clinical needs. The student is expected to:	
(A)	describe technologies that support the prevention and treatment of infectious diseases;	
(B)	explain the implication of vaccines on the immune system;	
(C)	investigate technologies used for the early detection of cancer;	
(D)	investigate technologies used for the treatment of several different types of cancers;	
(E)	explain the cardiovascular system and the technologies used in the diagnosis and treatment of heart disease; and	
(F)	describe and discuss technologies developed to support vital organ failure.	
(4) (5)	The student explores how human clinical trials are designed, conducted, and evaluated. The student is expected to:	
(A)	identify types of clinical trials;	
(B)	define and calculate a sample size; and	
(C)	analyze quantitative methods used to describe clinical trials.	
(5) (6)	The student recognizes the ethics involved in clinical research. The student is expected to:	

(A)	define informed consent;	
(B)	explain who can give informed consent;	
(C)	identify issues in research that influence the development of ethical principles and legal requirements currently governing research with human subjects; and	
(D)	explain the ethical guidelines for the conduct of research involving human subjects.	
(6) (7)	The student explains how medical technologies are managed. The student is expected to:	
(A)	describe how health science research is funded;	
(B)	explain the role of the Food and Drug Administration in approving new drugs and medical devices; and	
(C)	analyze factors that affect the dissemination of new medical technologies.	
(7) (8)	The student applies research principles to create a project that addresses a major health problem. The student is expected to:	
(A)	construct charts and graphs in facilitating data analysis and in communicating experimental results clearly and effectively using technology; and	
(B)	present the project to classmates, health professionals, parents, or instructors.	

DRAFT

Health Informatics (One Credit).		
	<u>TEKS with edits</u>	<u>Committee Comments</u>
(a)	General requirements. This course is recommended for students in grades 11-12. Prerequisite: Business Management I and Medical Terminology.	A new course related to an emerging field in health science industry.
(b)	Introduction.	
(1)	CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.	
(2)	The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.	
(3)	Health informatics is a course designed to provide students knowledge of one of the fastest growing areas in both academic and professional fields. Professionally, the large gap between the state of the art in computer technologies and the current state of affairs in health care information technology has generated demand for information and health professionals who can effectively design, develop and use technologies such as electronic medical records, patient monitoring systems, and digital libraries while managing the vast amount of data generated by these systems.	
(4)	Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.	
(5)	Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.	
(c)	Knowledge and skills.	
(1)	The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:	
(A)	demonstrate verbal and non-verbal communication in a clear, concise, and effective manner;	
(B)	demonstrate adaptability skills, such as problem solving and creative thinking;	
(C)	develop a career plan;	
(D)	employ teamwork;	
(E)	create a job specific resume; and	
(F)	appraise the characteristics desired by employers such as work ethics and professionalism.	
(2)	The student interprets fundamental knowledge of concepts of health information systems technology and the tools for collecting, storing, and retrieving health care data. The student is expected to:	
(A)	discuss and define the common information systems;	

(B)	<u>differentiate between the six types of information systems;</u>	
(C)	<u>explain how each of the six information systems support the administrative, financial, clinical and research needs of a health care enterprise;</u>	
(D)	<u>describe the components of an information system; and</u>	
(F)	<u>implement the concepts of health informatics by creating a culminating project.</u>	
(3)	<u>The student employs the various types of databases in relation to health informatics. The student is expected to:</u>	
(A)	<u>define the function of a database management system;</u>	
(B)	<u>identify the purpose of data modeling;</u>	
(C)	<u>define the customary steps in the data modeling process;</u>	
(D)	<u>differentiate between entities, attributes, and relationships in a data model; and</u>	
(E)	<u>explain various types of organizational databases.</u>	
(4)	<u>The student distinguishes between data and information. The student is expected to:</u>	
(A)	<u>discuss the importance of data security, accuracy, integrity, and validity; and</u>	
(B)	<u>understand data information concepts for health information systems and electronic health records.</u>	
(5)	<u>The student examines the evolution of the health information system. The student is expected to:</u>	
(A)	<u>evaluate the growing role of the electronic health record;</u>	
(B)	<u>review the progress of the development of the electronic health record; and</u>	
(C)	<u>explain functional requirements for electronic health records.</u>	
(6)	<u>The student examines the process of medical diagnostic and coding concepts as well as current procedural practices. The student is expected to:</u>	Some postsecondary programs require coding and classification systems and reimbursement methods as a part of curriculum.
(A)	<u>examine HIPPA guidelines for confidentiality, privacy and security of a patient's information within the medical record;</u>	
(B)	<u>differentiate between insurance fraud and insurance abuse;</u>	
(C)	<u>discuss the linkage between CPT codes, ICD -10-CM codes and medical necessity for reimbursement for charges billed;</u>	
(D)	<u>search ICD-10-CM code system for correct diagnosis code using patient information;</u>	

(E)	<u>identify the two types of codes in the health care common procedure coding system (HCPCS);</u>	
(F)	<u>explain how medical coding affects the payment process;</u>	
(7)	<u>The student identifies agencies involved in health insurance claims process. The student is expected to:</u>	
(A)	<u>define Medicaid and Medicare;</u>	
(B)	<u>discuss healthcare benefits programs such as TRICARE and CHAMPVA;</u>	
(C)	<u>explain how to manage a worker's compensation case;</u>	
(D)	<u>complete a current health insurance claim form such as the Centers for Medicare and Medicaid Service (CMS-1500) form ; and</u>	
(E)	<u>identify three ways to transmit electronic claims.</u>	

DRAFT

Pharmacology (One Credit).		
	TEKS with edits	Committee Comments
(a)	General requirements. <u>The Pharmacology course is recommended for students in Grades 11-12. The Prerequisite: Biology, and Chemistry. Recommended prerequisite: A course from the Health Science Cluster.</u>	This is a course needed as a prerequisite to the practicum where the pharmacy technician program is taught.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(3)	<u>The Pharmacology course is designed to study how chemical agents both natural and synthetic (i.e. drugs) affect biological systems. Knowledge of the properties of therapeutics agents is vital in providing quality health care. It is an ever changing, growing body of information that continually demands greater amounts of time and education from health care workers.</u>	
(4)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(5)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	
(A)	<u>demonstrate verbal and non-verbal communication in a clear, concise, and effective manner;</u>	
(B)	<u>demonstrate adaptability skills such as problem solving and creative thinking;</u>	
(C)	<u>develop a career plan;</u>	
(D)	<u>employ teamwork;</u>	
(E)	<u>create a job specific resume; and</u>	
(F)	<u>appraise the characteristics desired by employers.</u>	
(2)	<u>The student identifies individuals associated with manufacturing, dispensing, and administrating pharmaceuticals as a valued member of a healthcare team. The student is expected to:</u>	
(A)	<u>define pharmacology and its major subdivisions including pharmacodynamics, pharmacokinetics, and pharmacotherapeutics;</u>	

(B)	<u>explain the difference between therapeutic effects, side effects, and toxic effects;</u>	
(C)	<u>identify a drug receptor in the human body;</u>	
(D)	<u>trace the interaction and antagonist receptor;</u>	
(E)	<u>explain the relationship between drug dosage, drug response, and time;</u>	
(F)	<u>explain drug safety and therapeutic index;</u>	
(G)	<u>describe three names by which drugs are known; and</u>	
(H)	<u>list two common drug reference books.</u>	
(3)	<u>The student identifies individuals associated with manufacturing, dispensing, and administering pharmaceuticals as a valued member of a healthcare team. The student is expected to:</u>	
(A)	<u>identify career pathways related to pharmacology;</u>	
(B)	<u>define the role of the pharmacy team;</u>	
(C)	<u>research and describe emerging pharmacy career opportunities;</u>	
(D)	<u>analyze the impact of pharmaceuticals on the costs of health care; and</u>	
(E)	<u>evaluate the impact of pharmaceuticals on the costs of society.</u>	
(4)	<u>The student explains the ethical and legal responsibilities of pharmacists and pharmacy technicians. The student is expected to:</u>	
(A)	<u>describe the legal terms and consequences associated with prescription errors;</u>	
(B)	<u>analyze the six routes of medication administration;</u>	
(C)	<u>differentiate between negligence, product liability, contributory negligence, and regulatory law;</u>	
(D)	<u>evaluate the effect of medication errors related to the pharmacy and the industry;</u>	
(E)	<u>discuss the elements of a lawsuit; and</u>	
(F)	<u>define professional liability.</u>	
(5)	<u>The student uses a comprehensive medical vocabulary in order to communicate effectively with other healthcare professionals. The student is expected to:</u>	
(A)	<u>identify the various routes of drug medication;</u>	
(B)	<u>differentiate among the various classes of drugs;</u>	
(C)	<u>properly use common terms associated with pharmacology; and</u>	
(D)	<u>analyze unfamiliar terms using the knowledge of word roots, suffixes, and prefixes.</u>	

(6)	<u>The student demonstrates mathematical knowledge and skills to solve problems with systems of measurement utilized in the pharmacy. The student is expected to:</u>	
(A)	<u>analyze medication calculations including metric, apothecary, and household systems;</u>	
(B)	<u>convert a measurement expressed in one standard unit within a system to a measurement expressed in another unit within the same system;</u>	
(C)	<u>convert a measurement expressed in one system to a unit of the same measurement in a different system;</u>	
(7)	<u>The student recognizes the effectiveness of a pharmaceutical agent, their form, and route of administration. The student is expected to:</u>	
(A)	<u>differentiate between solid, semi-solid, and liquid dosage forms;</u>	
(B)	<u>name forms in which drugs are manufactured including their subcategories;</u>	
(C)	<u>list examples of drugs in each dosage form; and</u>	
(D)	<u>define medical terms associated with drug forms.</u>	
(8)	<u>The student must be able to select appropriate equipment, instruments, and use technology for specific tasks. The student is expected to:</u>	
(A)	<u>identify technology components used in the pharmacy;</u>	
(B)	<u>describe how technology applications approve efficiency in the pharmacy; and</u>	
(C)	<u>analyze the use of technology in the pharmacy.</u>	
(9)	<u>The student is expected to practice safety in dispensing, administrating pharmaceutical agents, prevent personal and client illness or injury. The student is expected to:</u>	
(A)	<u>employ safety standards;</u>	
(B)	<u>interpret rules associated with pharmacy standards;</u>	
(C)	<u>examine unsafe practices;</u>	
(D)	<u>observe safe procedures in the administration of client care; and</u>	
(E)	<u>demonstrate these safe procedures in the clinical setting.</u>	

§130.207. Medical Microbiology (~~One-Half to One~~ Science Credit).

TEKS with edits		Committee Comments
(a)	<p>General requirements. This course is recommended for students in Grades 10-12. Recommended prerequisites: three credits of science. <u>Prerequisites: Biology and Chemistry Recommended prerequisite: a course from the Health Science Cluster</u></p> <p>To receive credit in science, students must meet the 40% laboratory and fieldwork requirement identified in §74.3(b)(2)(C) of this title (relating to Description of a Required Secondary Curriculum).</p> <p><u>This course satisfies a high school science graduation requirement.</u></p>	<p>Required prerequisites – change needs to be made to prevent counselors from putting students in the class out of sequence because of recommended prerequisites wording.</p> <p>In order for students to have the health science endorsement would they need to have Principles of Health Science, and Health Science? <u>Yes, a student should have the courses listed as prerequisites for the endorsement, but not if they want to enroll as part of their sciences.</u></p>
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<p><u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u></p> <p>To receive credit in science, students must meet the 40% laboratory and fieldwork requirement identified in §74.3(b) (2) (C) of this title (relating to Description of a Required Secondary Curriculum).</p>	
(1)(3)	<u>Medical Microbiology is a course designed to</u> Students in Medical Microbiology explore the microbial world, studying topics such as pathogenic and non-pathogenic microorganisms, laboratory procedures, identifying microorganisms, drug resistant organisms, and emerging diseases.	
(4)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(5)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(2)(6)	Nature of science. Science, as defined by the National Academy of Sciences, is the "use of evidence to construct testable explanations and predictions of natural phenomena, as well as the knowledge generated through this process." This vast body of changing and increasing knowledge is described by physical, mathematical, and conceptual models. Students should know that some questions are outside the realm of science because they deal with phenomena that are not scientifically testable.	

(3)-(7)	Scientific inquiry. Scientific inquiry is the planned and deliberate investigation of the natural world. Scientific methods of investigation are experimental , descriptive, or comparative <u>or experimental</u> . The method chosen should be appropriate to the question being asked.	Descriptive, comparative or experimental sequence. Experimental last because it tends to be a more complex design.
(4)-(8)	Science and social ethics. Scientific decision making is a way of answering questions about the natural world. Students should be able to distinguish between scientific decision-making methods (scientific methods) and ethical and social decisions that involve science (the application of scientific information).	
(5)-(9)	Science, systems, and models. A system is a collection of cycles, structures, and processes that interact. All systems have basic properties that can be described in space, time, energy, and matter. Change and constancy occur in systems as patterns and can be observed, measured, and modeled. These patterns help to make predictions that can be scientifically tested. Students should analyze a system in terms of its components and how these components relate to each other, to the whole, and to the external environment.	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	Added employability skills
(A)	<u>demonstrate verbal and non-verbal communication in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of team.</u>	
(+)-(2)	The student conducts investigations, for at least 40% of instructional time, using safe, environmentally appropriate, and ethical practices. These investigations must involve actively obtaining and analyzing data with physical equipment, but may also involve experimentation in a simulated environment as well as field observations that extend beyond the classroom. The student is expected to:	
(A)	demonstrate safe practices during laboratory and field investigations; and	
(B)	demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials.	
(2)-(3)	The student uses scientific methods and equipment during laboratory and field investigations. The student is expected to:	
(A)	know the definition of science and understand that it has limitations, as specified in subsection (b)(2) of this section;	
(B)	know that hypotheses are tentative and testable statements that must be capable of being supported or not supported by observational evidence. Hypotheses of durable explanatory power which have been tested over a wide variety of conditions are incorporated into theories; <u>understand hypotheses are tentative but testable explanations capable of being supported or not supported by observational evidence. Hypotheses validated by repeated investigation and consistency of results can be incorporated into theories;</u>	Science: understand hypotheses are tentative but testable explanations capable of being supported or not supported by observational evidence. Hypotheses validated by repeated

		investigation and consistency of results can be incorporated into theories;
(C)	know scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are well-established and highly reliable explanations, but they may be subject to change as new areas of science and new technologies are developed; <u>know scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are experimentally supported through rigorous testing methods, but they may be subject to change as new areas of science are created and new technologies emerge;</u>	Science: know scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are experimentally supported through rigorous testing methods, but they may be subject to change as new areas of science are created and new technologies emerge;
(D)	distinguish between scientific hypotheses and scientific theories; <u>distinguish and differentiate between scientific hypothesis and theory;</u>	Science: distinguish and differentiate between scientific hypothesis and theory;
(E)	plan and implement descriptive, comparative, and experimental investigations, including asking questions, formulating testable hypotheses, and selecting equipment and technology;	
(F)	collect and organize qualitative and quantitative data and make measurements with accuracy and precision using tools such as calculators, spreadsheet software, data-collecting probes, computers, standard laboratory glassware, microscopes, various prepared slides, stereoscopes, metric rulers, electronic balances, hand lenses, Celsius thermometers, hot plates, lab notebooks or journals, timing devices, Petri dishes, lab incubators, dissection equipment, meter sticks, and models, diagrams, or samples of biological specimens or structures;	
(G)	analyze, evaluate, make inferences, and predict trends from data; and	
(H)	communicate valid conclusions supported by the data through methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports;	
(I)	<u>dispose of all biological material in the proper biohazard containers; and</u>	Science team recommendation added
(J)	<u>implore standard precautions including proper protective equipment during all laboratory exercises.</u>	Science team recommendation added
(3)-(4)	The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom. The student is expected to:	
(A)	in all fields of science, analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing, including examining all sides of scientific evidence of those scientific explanations, so as to encourage critical thinking by the student;	
(B)	communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials;	

(C)	draw inferences based on data related to promotional materials for products and services;	
(D)	evaluate the impact of scientific research on society and the environment;	
(E)	evaluate models according to their limitations in representing biological objects or events; and	
(F)	research and describe the history of science and contributions of scientists.	
(4) (5)	The student describes the relationships between microorganisms and health and wellness in the human body. The student is expected to:	
(A)	research and describe the historical development of microbiology as it relates to health care of an individual; <u>and</u>	
(H) (B)	research roles, functions, and responsibilities of agencies governing infectious disease control.	Moved student expectation to form another TEK
(6)	<u>The student is expected to perform and analyze results in the microbiology laboratory. The student is expected to:</u>	Reorganize
(B) (A)	classify microorganisms using a dichotomous key;	
(B)	<u>explain the difference between Gram positive and Gram negative bacteria regarding the bacterial cell wall;</u>	Basic concept of microbiology Same as 5H-Health Science-reworded the student expectation
(B) (C)	identify chemical processes of microorganisms;	
(C) (D)	recognize the factors required for microbial reproduction and growth;	
(D) (E)	explain pathogenic and non-pathogenic microbes in the human body; <u>identify the normal flora microorganisms of the human body;</u>	The normal flora, usually non-pathogenic, is the term used in the clinical laboratory
(F)	<u>distinguish between pathogens, opportunistic pathogens, hospital-acquired infections, and colonizing microorganisms;</u>	Added because of the terminology important to microbiology
(E) (G)	describe the <u>colony morphology of microorganisms;</u> and characteristics Gram stains of microorganisms; using a variety of microbiological techniques;	Morphology is only used in the colony (growth of the organism) and the Gram stain
(H)	<u>interpret the Gram stain results;</u>	Science: same as 5 B Health Science-reworded student expectation
(F) (I)	discuss the results of laboratory procedures <u>such as biochemical reactions</u> that are used to identify microorganisms; <u>and</u>	
(J)	<u>explain the role of the sensitivity report provided to the clinician by the microbiology department;</u>	
(G)	explain how pathogens affect the human-body systems; and	Added this below

(H)	research roles, functions, and responsibilities of agencies governing infectious disease control.	Moved to a separate TEK
(5) (7)	The student examines the role of pathogens <u>microorganisms</u> in infectious diseases. The student is expected to:	Microorganism is a general term...non-pathogenic microorganisms can cause infectious disease as well.
(A)	outline the infectious process <u>including how pathogenic microorganisms affect the human body system</u> ;	Added specifics related to microorganisms
(B)	classify microorganisms using a dichotomous key;	Moved to another TEK
(B) (E)	categorize diseases caused by bacteria, fungi, viruses, protozoa, rickettsias, arthropods, and helminths;	
(C) (D)	explain the body's immune response and defenses against infection;	
(D) (E)	evaluate the effects of anti-microbial agents <u>such as narrow and broad spectrum antibiotics</u> ;	
(E) (F)	examine reemergence of diseases such as malaria, tuberculosis, and polio;	
(F)	<u>identify common bacterial infections from hospital-acquired infection and community-acquired infections such as <i>Clostridium difficile</i> and <i>Staphylococcus aureus</i></u> ;	Added to recognize the hospital-acquired and community-acquired infections.
(G)	investigate drug-resistant microorganisms, including <u>such as carbapenem-resistant <i>Enterobacteriaceae</i>, methicillin-resistant <i>Staphylococcus aureus</i>, vancomycin-intermediate/resistant <i>Staphylococci aureus</i>, vancomycin-resistant enterococci, and emergent antibiotic-resistant superbugs</u> ; and	Updated
(H)	outline the role of the governing agencies in monitoring and establishing guidelines based on the spread of infectious diseases.	

§130.208. Pathophysiology (One-Half to One ~~Science~~ Credit).

TEKS with edits		Committee Comments
(a)	<p>General requirements. This course is recommended for students in Grades 11-12. Recommended prerequisites: three credits of science. Required prerequisites: A course from the Health Science Career Cluster, Biology, and Chemistry. <u>Prerequisites: Biology and Chemistry Recommended prerequisite: a course from the Health Science Cluster</u></p> <p>To receive credit in science, students must meet the 40% laboratory and fieldwork requirement identified in §74.3(b)(2)(C) of this title (relating to Description of a Required Secondary Curriculum).</p> <p><u>This course satisfies a high school science graduation requirement.</u></p>	<p>Required prerequisites – change needs to be made to prevent counselors from putting students in the class out of sequence because of recommended prerequisites wording.</p> <p>In order for students to have the health science endorsement would they need to have Principles of Health Science, and Health Science? <u>Yes, a student should have the courses listed as prerequisites for the endorsement, but not if they want to enroll as part of their sciences.</u></p> <p><u>Science – Biology & Chemistry prerequisites.</u></p>
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<p><u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u></p> <p>To receive credit in science, students must meet the 40% laboratory and fieldwork requirement identified in §74.3(b)(2)(C) of this title (relating to Description of a Required Secondary Curriculum)</p>	
(+)(3)	<p><u>Pathophysiology is a course designed for</u> In Pathophysiology, students <u>to</u> conduct laboratory and field investigations, use scientific methods during investigations, and make informed decisions using critical thinking and scientific problem solving. Students in Pathophysiology study disease processes and how humans are affected. Emphasis is placed on prevention and treatment of disease. Students will differentiate between normal and abnormal physiology.</p>	
(4)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	
(5)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(6)	<u>This course satisfies a science graduation requirement.</u>	

(2) (7)	Nature of science. Science, as defined by the National Academy of Sciences, is the "use of evidence to construct testable explanations and predictions of natural phenomena, as well as the knowledge generated through this process." This vast body of changing and increasing knowledge is described by physical, mathematical, and conceptual models. Students should know that some questions are outside the realm of science because they deal with phenomena that are not scientifically testable.	
(3) (8)	Scientific inquiry. Scientific inquiry is the planned and deliberate investigation of the natural world. Scientific methods of investigation are experimental , descriptive, or comparative or experimental . The method chosen should be appropriate to the question being asked.	Order should be "descriptive, comparative or experimental" as in 2E. Experimental is frequently the most complex design.
(4) (9)	Science and social ethics. Scientific decision making is a way of answering questions about the natural world. Students should be able to distinguish between scientific decision-making methods (scientific methods) and ethical and social decisions that involve science (the application of scientific information).	
(5) (10)	Science, systems, and models. A system is a collection of cycles, structures, and processes that interact. All systems have basic properties that can be described in space, time, energy, and matter. Change and constancy occur in systems as patterns and can be observed, measured, and modeled. These patterns help to make predictions that can be scientifically tested. Students should analyze a system in terms of its components and how these components relate to each other, to the whole, and to the external environment.	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	Added employability skills
(A)	<u>demonstrate verbal and non-verbal communication in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of team.</u>	
(1) (2)	The student conducts investigations, for at least 40% of instructional time, using safe, environmentally appropriate, and ethical practices. These investigations must involve actively obtaining and analyzing data with physical equipment, but may also involve experimentation in a simulated environment as well as field observations that extend beyond the classroom. The student is expected to:	
(A)	demonstrate safe practices during laboratory and field investigations; and	
(B)	demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials.	
(2) (3)	The student uses scientific methods and equipment during laboratory and field investigations. The student is expected to:	
(A)	know the definition of science and understand that it has limitations, as specified in subsection (b)(2) of this section;	

(B)	<p>know that hypotheses are tentative and testable statements that must be capable of being supported or not supported by observational evidence. Hypotheses of durable explanatory power which have been tested over a wide variety of conditions are incorporated into theories;</p> <p><u>understand hypotheses are tentative but testable explanations capable of being supported or not supported by observational evidence. Unlike hypotheses, scientific theories are experimentally supported through rigorous testing methods, but they may be subject to change as new areas of science are created and new technologies emerge;
(D)	<p>distinguish between scientific hypotheses and scientific theories;</p> <p><u>distinguish and differentiate between scientific hypothesis and theory;</u></p>	Science: distinguish and differentiate between scientific hypothesis and theory;
(E)	plan and implement descriptive, comparative, and experimental investigations, including asking questions, formulating testable hypotheses, and selecting equipment and technology;	This is the best order.
(F)	collect and organize qualitative and quantitative data and make measurements with accuracy and precision using tools such as calculators, spreadsheet software, data-collecting probes, computers, standard laboratory glassware, microscopes, various prepared slides, stereoscopes, metric rulers, electronic balances, hand lenses, Celsius thermometers, hot plates, lab notebooks or journals, timing devices, Petri dishes, lab incubators, dissection equipment, meter sticks, and models, diagrams, or samples of biological specimens or structures;	
(G)	analyze, evaluate, make inferences, and predict trends from data; and	
(H)	communicate valid conclusions supported by the data through methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports.	
(3) (4)	The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom. The student is expected to:	
(A)	in all fields of science, analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing, including examining all sides of scientific evidence of those scientific explanations, so as to encourage critical thinking by the student;	

(B)	communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials;	
(C)	draw inferences based on data related to promotional materials for products and services;	
(D)	evaluate the impact of scientific research on society and the environment;	
(E)	evaluate models according to their limitations in representing biological objects or events; and	
(F)	research and describe the history of science and contributions of scientists.	
(4) (5)	The student analyzes the mechanisms of pathology. The student is expected to:	
(A)	identify biological and chemical processes at the cellular level;	
(B)	detect changes resulting from mutations and neoplasms by examining cells, tissues, organs, and systems;	
(C)	identify factors that contribute to disease such as age, gender, environment, lifestyle, and heredity;	
(D)	examine the body's compensating mechanisms occurring under various conditions; and	
(E)	analyze how the body attempts to maintain homeostasis when changes occur.	
(5) (6)	The student examines the process of pathogenesis. The student is expected to:	
(A)	identify pathogenic organisms using microbiological techniques;	
(B)	differentiate the stages of pathogenesis, including incubation period, prodromal period, and exacerbation or remission;	
(C)	analyze the body's natural defense systems against infection such as barriers, the inflammatory response, and the immune response;	
(D)	evaluate the effects of chemical agents, environmental pollution, and trauma on the disease process; and	
(E)	research stages in the progression of disease.	
(6) (7)	The student examines a variety of human diseases. The student is expected to:	
(A)	describe on the nature of diseases according to etiology, signs and symptoms, diagnosis, prognosis, and treatment options;	
(B)	explore advanced technologies for the diagnosis and treatment of disease;	
(C)	examine reemergence of diseases such as malaria, tuberculosis, and polio;	
(D)	describe drug-resistant diseases; <u>differentiate between hospital-acquired infections and community-acquired infections;</u>	Important topic

(E)	<u>examine antibiotic-resistant diseases such as methicillin resistant <i>Staphylococcus aureus</i>;</u>	Reworded D to be more specific to antibiotic resistant organisms
(E) (F)	differentiate between congenital disorders and childhood diseases; and	
(F) (G)	investigate ways diseases affect multiple body systems.	
(7) (8)	The student integrates the effects of disease prevention and control. The student is expected to:	
(A)	evaluate public health issues related to asepsis, isolation, immunization, and quarantine;	
(B)	analyze the effects of stress and aging on the body;	
(C)	evaluate treatment options for diseases;	
(D)	investigate diseases that threaten world health and propose intervention strategies; and	
(E)	develop a plan for personal health and wellness.	

DRAFT

§130.205. Practicum in Health Science I (Two to Three Credits).

TEKS with edits		Committee Comments
(a)	<p>General requirements. This course is recommended for students in Grades 11-12. Recommended prerequisites- <u>Prerequisites: Principles of Health Science, Health Science, and Biology.</u></p> <p>A student shall be awarded two credits for successful completion of this course, when the student participates in at least an average of 10 hours, but less than 15 hours, per week of a paid or unpaid, laboratory- or work-based application of previously studied knowledge and skills related to the Health Science Career Cluster.</p> <p>A student shall be awarded three credits for successful completion of this course, when the student participates in an average of 15 hours per week of a paid or unpaid, laboratory- or work-based application of previously studied knowledge and skills related to the Health Science Career Cluster.</p>	Required prerequisites – change needs to be made to prevent counselors from putting students in the class out of sequence because of recommended prerequisites wording. Principles of Health Science need to be added to ensure sequence of course followed.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(3)	The Practicum is designed to give students practical application of previously studied knowledge and skills. Practicum experiences can occur in a variety of locations appropriate to the nature and level of experience.	
(4)	To pursue a career in the health care industry, students should learn to reason, think critically, make decisions, solve problems, and communicate effectively. Students should recognize that quality health care depends on the ability to work well with others.	
(5)	The health care industry is comprised of diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems that function individually and collaboratively to provide comprehensive health care. Students should identify <u>recognize</u> the employment opportunities, technology, and safety requirements of each system. Students are expected to apply the knowledge and skills necessary to pursue a health science <u>certification or licensure</u> career through further education and employment.	
(4) (6)	Professional integrity in the health care industry is dependent on acceptance of ethical and legal responsibilities. Students are expected to employ their ethical and legal responsibilities and limitations and understand the implications of their actions.	
(7)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	

(8)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	
(A)	<u>demonstrate verbal and non-verbal communication in a clear, concise, and effective manner; and</u>	
(B)	<u>exhibit the ability to cooperate, contribute, and collaborate as a member of team.</u>	
(+) (2)	The student applies mathematics, science, English language arts, and social sciences in health science. The student is expected to:	
(A)	interpret data from various sources in formulating conclusions;	
(B)	compile information from a variety of sources to create a technical report;	
(C)	plan, prepare, and deliver a presentation;	
(D)	examine the environmental factors that affect homeostasis;	
(E)	relate anatomical structure to physiological functions;	
(F)	distinguish atypical anatomy and physiology in the human body systems;	
(G)	implement scientific methods in preparing clinical case studies; and	Moved to Practicum II
(H)	compare and contrast health issues in the global society.	Moved to Practicum II
(3)	The student uses verbal and non-verbal communication skills. The student is expected to:	
(A)	accurately describe and report information, according to facility policy, observations, <u>policies</u> and procedures;	
(B)	demonstrate therapeutic communication skills to provide quality care; and	
(C)	employ therapeutic measures to minimize communication barriers.	
(4)	The student implements the knowledge and skills of a health care professional necessary to acquire and retain employment. The student is expected to:	
(A)	demonstrate proficiency in medical terminology and skills related to the health care of an individual; <u>and</u>	
(B)	research academic requirements for professional advancement such as certification, licensure, registration, continuing education, and advanced degrees;	Moved to Practicum II
(C)	describe the steps necessary for entrepreneurship in a free enterprise system;	Moved to Practicum II
(D) (B)	develop new problem-solving strategies based on previous knowledge and skills; ; <u>and</u>	

(E) -(C)	evaluate performance for continuous improvement and advancement in health science <u>care</u> .	
(5)	The student employs ethical behavior standards and legal responsibilities. The student is expected to:	
(A)	identify individual ethical and legal behavior standards according to professional regulatory agencies; <u>and</u>	
(B)	<u>research case studies related to unethical behavior in the healthcare industry.</u>	
(B)	integrate legal and ethical behavior standards such as Patient Bill of Rights, Advanced Directives, and the Health Insurance Portability and Accountability Act into the scope of practice; and	Moved to Practicum II
(C)	critique court cases related to professional liability and ethics.	Moved to Practicum II
(5)	The student analyzes the role of a health science team member. The student is expected to:	Moved to Practicum II
(A)	participate in team teaching and conflict management such as peer mediation, problem solving, and negotiation skills;	Moved to Practicum II
(B)	refine consensus building techniques; and	Moved to Practicum II
(C)	engage in leadership opportunities in the community.	Moved to Practicum II
(6)	The student employs a safe environment to prevent hazardous situations. The student is expected to:	
(A)	integrate regulatory standards such as standard precautions and safe patient handling;	
(B)	respond to emergencies consistent with the student's level of training such as fire and disaster drills;	Moved to Practicum II
(C) -(B)	evaluate hazardous materials according to the material safety data sheets; and	
(D) -(C)	apply principles of infection control and body mechanics in all aspects of the health care industry.	
(7)	The student explores the knowledge and skill levels necessary for advancing in the health science professions. The student is expected to:	
(A)	identify knowledge and skills that are transferable among health science professions; <u>and</u>	
(B)	<u>research career pathways pertaining health care industry.</u>	
(B)	plan academic achievement for advancement in the health science industry; and	Moved to Practicum II
(C)	analyze emerging technologies in the health science industry.	Moved to Practicum II
(8)	The student implements skills in monitoring individual health status during therapeutic or diagnostic procedures. The student is expected to:	
(A)	describe pre-procedural preparations;	Moved to Practicum II

(B)	observe therapeutic or diagnostic procedures;	Moved to Practicum II
(C) -(A)	identify care indicators of health status; and	
(D) -(B)	record health status according to facility protocol.	
(9)	The student documents technical knowledge and skills <u>recognizes the importance of participation in extended learning experiences.</u> The student is expected to:	
(A)	update a professional portfolio to include:	Moved to Practicum II
(i)	technical skill competencies;	Moved to Practicum II
(ii)	licenses or certifications;	Moved to Practicum II
(iii)	awards and scholarships;	Moved to Practicum II
(iv) -(A)	<u>participate in</u> extended learning experiences such as community service, and active participation in career and technical student organizations, and professional organizations; <u>and</u>	
(B)	<u>create a plan of action targeting the career and technical student organization's community service goal.</u>	
(v)	abstract of technical competencies mastered during the practicum;	Moved to Practicum II
(vi)	resumé;	Moved to Practicum II
(vii)	samples of work; and	Moved to Practicum II
(viii)	evaluation from the practicum supervisor; and	Moved to Practicum II
(B)	present the portfolio to all interested stakeholders such as in a poster presentation.	Moved to Practicum II

§130.205. Practicum in Health Science II (Two to Three Credits).

TEKS with edits		Committee Comments
(a)	<p>General requirements. This course is recommended for students in Grades 11-12. Recommended Prerequisites: <u>Principles of Health Science</u>, Health Science and Biology.</p> <p><u>A student shall be awarded two credits for successful completion of this course, when the student participates in at least an average of 10 hours, but less than 15 hours, per week of a paid or unpaid, laboratory- or work-based application of previously studied knowledge and skills related to the Health Science Career Cluster.</u></p> <p><u>A student shall be awarded three credits for successful completion of this course, when the student participates in an average of 15 hours per week of a paid or unpaid, laboratory- or work-based application of previously studied knowledge and skills related to the Health Science Career Cluster.</u></p>	Required prerequisites – change needs to be made to prevent counselors from putting students in the class out of sequence because of recommended prerequisites wording. Principles of Health Science need to be added to ensure sequence of course followed.
(b)	Introduction.	
(1)	<u>CTE instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.</u>	
(2)	<u>The Health Science Career Cluster focuses on planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.</u>	
(4) (3)	The Practicum is designed to give students practical application of previously studied knowledge and skills. Practicum experiences can occur in a variety of locations appropriate to the nature and level of experience.	
(4)	To pursue a career in the healthcare industry, students should learn to reason, think critically, make decisions, solve problems, and communicate effectively. Students should recognize that quality healthcare depends on the ability to work well with others.	
(5)	The healthcare industry is comprised of diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems that function individually and collaboratively to provide comprehensive healthcare. Students should identify <u>recognize</u> the employment opportunities, technology, and safety requirements of each system. Students are expected to apply the knowledge and skills necessary to pursue acquire- a health science <u>certification or licensure</u> career through further education and employment.	
(4) (6)	Professional integrity in the healthcare industry is dependent on acceptance of ethical and legal responsibilities. Students are expected to employ their ethical and legal responsibilities and limitations and understand the implications of their actions.	
(7)	<u>Students are encouraged to participate in extended learning experiences such as career and technical student organizations and other leadership or extracurricular organizations.</u>	

(8)	<u>Statements that contain the word "including" reference content that must be mastered, while those containing the phrase "such as" are intended as possible illustrative examples.</u>	
(c)	Knowledge and skills.	
(1)	<u>The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:</u>	Added employability skills
(A)	<u>demonstrate verbal and non-verbal communication in a clear, concise, and effective manner;</u>	Added TWC DWAs
(B)	<u>exhibit leadership thought the ability to guide, support, mentor, encourage, and influence others;</u>	Added TWC DWAs
(C)	<u>exhibit a professional attitude such as dressing appropriately or conducting one's self in a manner appropriate for the workplace; and</u>	Added TWC DWAs
(D)	<u>exemplify professional integrity reflecting ethical and legal responsibilities.</u>	Added TWC DWAs
(1) (2)	The student applies mathematics, science, English language arts, and social sciences in health science. The student is expected to:	
(A)	interpret data from various sources in formulating conclusions;	
(B)	compile information from a variety of sources to create a technical report;	
(C)	plan, prepare, and deliver a presentation;	
(D)	examine the environmental factors that affect homeostasis;	
(E)	relate anatomical structure to physiological functions;	
(F)	distinguish atypical anatomy and physiology in the human body systems;	
(G)	implement scientific methods in preparing clinical case studies; and	
(H)	compare and contrast health issues in the global society.	
(2) (3)	The student uses verbal and non-verbal communication skills. The student is expected to:	
(A)	accurately describe and report information, according to facility policies <u>policy</u> , observations , and procedures;	Consistent with Practicum I
(B)	demonstrate therapeutic communication skills to provide quality care; and	
(C)	employ therapeutic measures to minimize communication barriers.	
(3) (4)	The student implements the knowledge and skills of a healthcare professional necessary to acquire and retain employment. The student is expected to:	
(A)	<u>improve</u> demonstrate proficiency in medical terminology and skills related to the healthcare of an individual;	

(B)	research academic requirements for professional advancement such as certification, licensure, registration, continuing education, and advanced degrees;	
(C)	explore the steps necessary for entrepreneurship in a free enterprise system;	
(D)	develop new problem-solving strategies based on previous knowledge and skills; and	
(E)	evaluate performance for continuous improvement and advancement in the healthcare industry.	
(4) (5)	The student employs ethical behavior standards and legal responsibilities. The student is expected to:	
(A)	Appraise integrate individual ethical and legal behavior standards according to professional regulatory agencies;	
(B)	integrate legal and ethical behavior standards such as Patient Bill of Rights, Advanced Directives, and the Health Insurance Portability and Accountability Act into the scope of practice; and	
(C)	critique court cases related to professional liability and ethics.	
(5) (6)	The student analyzes the role of a healthcare team member. The student is expected to:	
(A)	participate in team teaching and conflict management such as peer mediation, problem solving, and negotiation skills;	
(B)	refine consensus-building techniques; and	
(C)	engage in leadership opportunities in the community.	
(6) (7)	The student employs a safe environment to prevent hazardous situations. The student is expected to:	
(A)	integrate regulatory standards such as including standard precautions and safe patient handling;	These standards should be addressed in the classroom
(B)	respond to emergencies consistent with the student's level of training for fire and disaster drills using training such as citizen response team training (CERT) ;	Provided an example
(C)	manage evaluate hazardous materials according to the material -safety data sheets; and	Upcoming OSHA change to the hazardous communication standard, from MSDS to SDS
(D)	differentiate apply principles of infection control and body mechanics in all aspects of the healthcare industry.	
(7) (8)	The student explores the knowledge and skill levels necessary for advancing in the healthcare professions. The student is expected to:	
(A)	interpret knowledge and skills that are transferable among health science professions;	7A in Practicum I
(B) (A)	plan academic achievement for advancement in the healthcare industry; and	
(C) (B)	analyze emerging technologies in the healthcare industry.	

(8) -(9)	The student implements skills in monitoring individual health status during therapeutic or diagnostic procedures. The student is expected to:	
(A)	describe pre-procedural preparations;	
(B)	observe therapeutic or diagnostic procedures;	
(C)	identify care indicators of health status; and	
(D)	<u>evaluate</u> record health status according to facility protocol.	
(9) -(10)	The student documents technical knowledge and skills. <u>The student uses the knowledge and skills to extend learning experiences into the community.</u> The student is expected to:	
(A)	create update a professional portfolio <u>to include components such as the student's technical skill competencies, licensures or certifications, awards, scholarships, abstract of technical competencies mastered during the practicum, resume, samples of work, and an evaluation from the practicum supervisor;</u>	Reword to remove romanettes
(i)	technical skill competencies;	
(ii)	licensures or certifications;	
(iii)	awards and scholarships;	
(iv) -(B)	<u>participate in</u> extended learning experiences such as community service, and active participation in career and technical student organizations, and professional organizations;	
(v)	abstract of technical competencies mastered during the practicum;	
(vi)	resumé;	
(vii)	samples of work; and	
(viii)	evaluation from the practicum supervisor; and	
(B) -(C)	present the portfolio to all interested stakeholders such as in a poster presentation.
