Location: Last sentence of first paragraph under Weapons Safety and second paragraph

Original Text: "Accidents involving weapons can seriously injure or kill someone.

To help prevent accidents in homes that contain weapons, adults should keep guns and other weapons locked in a safe place that is out of reach of children. When storing a gun, adults should remove the ammunition (bullets) and keep it in another locked place away from the gun. It is important to comply with any rules prohibiting the possession and improper use of weapons, including in homes, schools, and public places."

Updated Text: "Improper use of weapons can seriously injure or kill someone. To help prevent injuries from improper use of weapons, adults should keep guns and other weapons locked in a safe place that is out of reach of children. When storing a gun, adults should remove the ammunition (bullets) and keep it in another locked place away from the gun. It is important to comply with any rules prohibiting the possession and improper use of weapons, including in homes, schools, and public places. Legal consequences for improper use of a weapon can include fines and jail time."

Original Text: "El uso de inhalantes, aunque sea una sola vez, puede causar la muerte por insuficiencia cardíaca o asfixia."

Updated Text: "El uso inadecuado de armas puede causar lesiones graves o incluso la muerte. Para prevenir lesiones por el uso inadecuado de armas, los adultos deben guardar las pistolas y las armas de fuego en un lugar seguro que esté fuera del alcance de los niños. Antes de guardar las armas de fuego, los adultos deben retirar la munición (balas) y guardarla en un lugar separado y cerrado que esté lejos de las armas. Es importante cumplir con las reglas que prohíban la posesión y el uso inadecuado de armas, incluso en las casas, las escuelas y los lugares públicos. Las consecuencias legales por el uso indebido de armas pueden incluir multas y encarcelamiento."

Location: Develop Your Skills #23

Original Text: "Your role play should resolve the conflict healthfully and should include the use of assertive communication skills. It should confront and address the violence in a way that ensures everyone's safety physically, socially, and mentally and clearly discourages the behavior. As you develop the role play, pay attention to each team member's verbal and nonverbal communication. If someone is uncomfortable, show empathy and rework the role play. Enlist the help of your teacher as a mediator, if needed, and perform the role play for the class."

Updated Text: "Your role play should resolve the conflict healthfully and should include the use of assertive communication and mediation skills. It should confront and address the violence in a way that ensures everyone's safety physically, socially, and mentally, demonstrates the help of a mediator, and clearly discourages the behavior. As you develop the role play, pay attention to each team member's verbal and nonverbal communication. If someone is uncomfortable, show empathy and rework the role play. Perform the role play for the class."

Location: Develop Your Skills #23

Original Text: "Your role play should resolve the conflict healthfully and should include the use of assertive communication skills. It should confront and address the violence in a way that ensures everyone's safety physically, socially, and mentally and clearly discourages the behavior. As you develop the role play, pay attention to each team member's verbal and nonverbal communication. If someone is uncomfortable, show empathy and rework the role play. Enlist the help of your teacher as a mediator, if needed, and perform the role play for the class."

Updated Text: "Your role play should resolve the conflict healthfully and should include the use of assertive communication and mediation skills. It should confront and address the violence in a way that ensures everyone's safety physically, socially, and mentally, demonstrates the help of a mediator, and clearly discourages the behavior. As you develop the role play, pay attention to each team member's verbal and nonverbal communication. If someone is uncomfortable, show empathy and rework the role play. Perform the role play for the class."

Updated Text: "Your role play should resolve the conflict healthfully and should include the use of assertive communication and mediation skills. It should confront and address the violence in a way that ensures everyone's safety physically, socially, and mentally, demonstrates the help of a mediator, and clearly discourages the behavior. As you develop the role play, pay attention to each team member's verbal and nonverbal communication. If someone is uncomfortable, show empathy and rework the role play. Perform the role play for the class."

Original Text: New Content

Updated Text: "To compare, most people in the United States consume more than 3,400 milligrams each day. Highly processed or commercially prepared foods are common sources of added sugars, saturated fats, and sodium and can increase the risk for diabetes, heart disease, and cancer. Preparing fresh or minimally processed food can reduce the amount of added sugars, saturated fats, and sodium a person consumes."

Updated Text: Vector-Borne Illness: Vector-borne illnesses are caused by mosquitoes, ticks, and fleas that spread pathogens. Depending on where you live determines which vector-borne disease may be most prevalent in your area. Throughout the United States the most common mosquito-borne diseases are the West Nile virus and Malaria and the most common tickborne diseases are Spotted Fever Rickettsiosis and Lyme Disease. Some of these diseases can cause long-term symptoms and can be passed from mother to fetus. To protect yourself wear long-sleeved shirts and pants, use an EPA-registered insect repellent containing DEET, stay out of tall grasses and bushes, and check your skin and scalp after being outside. Symptoms of vector-borne illnesses vary but may include fever, chills, headache, skin rash, nausea, difficulty breathing, racing heartbeat, vomiting, and swelling of your lips, tongue, or face. Always clean any bite with soap and water and rub with alcohol. Carefully remove ticks with tweezers. Always see a physician if you show symptoms like rash, swelling, vomiting, or other signs of communicable disease.

Updated Text: There are a variety of communication skills that can help you make healthy decisions (figure 1.4). How you communicate will be different based on the situation you are in and what you are trying to achieve. Part of communicating your needs is to identify which communication skills you need in a given situation. For example, your opinions may differ from those of your parents or guardian, and you may need to try several communication skills to understand their perspective and to help them understand yours. It is also important to recognize that you can learn new ways to communicate and you can continue to improve your communication skills throughout your life.

Updated Text: Breakfast is an important meal. If you don't eat breakfast at home or at school, you may have a harder time focusing and become more tired in school. You may also feel cranky or restless. Studies have also shown that skipping breakfast may hurt your grades in school. Breakfast helps to replenish the nutrients your body has lost during sleep and prepares you for the day ahead. Some strategies for choosing healthy foods include preparing grab-and-go breakfasts ahead of time, avoiding buying unhealthy foods, and planning the night before what you're going to eat so that you're less likely to make an unhealthy choice in the moment.

Updated Text: Screen: HW 5M05-4.4 - I-Messages Expanded

This screen activity reinforces how to manage multiple emotions at the same time and can be used to help discuss how brain development during childhood affects decision making.

Tell students: "An I-Message is a way to talk to someone else about how you are feeling."

Explain that they can use an I-Message when they have a conflict with someone.

Read through the script together. Toggle Example to On to see a completed script.

Select the Paginating Arrow. Allow students to choose or assign groups of three. In each group, there will be a speaker, an observer, and a listener.

Select Directions. Read the directions to students and check for understanding. Check to ensure that each group member knows their role.

Navigate to the next screen. To add background music to the discussion, select the Play button.

Invite group members to swap roles and repeat the activity as time allows.

Ask:

Scenario: You are upset with your friend because you heard that they were talking about you. Create an I-Message. If students feel comfortable sharing, take volunteers to read their I-Messages to the class. [115.15.b.3.H.i]

As we grow and develop, the limbic part of our brain which controls our emotions can overpower our prefrontal cortex. This can lead to emotional outbursts and sometimes decision making that is not thought through.

We can train our prefrontal cortex by talking, discussing, role-play, and education. This screen is a good way to train this part of our brain.

Select the example to continue, and talk through how the character might be feeling and the decisions she might encounter with a new baby in the house.

Ask students if they have had the same situation happen to them. Invite them to turn to a partner to share their experiences if they choose.

Tell students that discussing our emotions with trusted friends and family in the midst of a big change like this is a very effective way to improve our decision making skills. It allows our prefrontal cortex to remain in control rather than our emotions (limbic system) to take charge. [115.17.b.5.B.ii]

Updated Text: Toolbox - Marvin's Marvelous Brain (Story)

This screen activity invites students to make connections between basic brain anatomy and impulses.

The story introduces Samir, who is watching a video about parts of the brain and how they affect our impulses and choices.

Ask students about the key details in the story, especially as they relate to brain function.

Highlight key words in the story, such as brainstem, limbic system, amygdala, prefrontal cortex, impulse, and regulate.

[115.15.b.3.C.i,ii; 115.16.b.3.C.i-iv]

Invite students to point out in the text or recall from memory the words that suggested feelings of emotions.

Ask students about emotional content of the story:

Following the story, invite students to tell the story in their own words, or recount the key events. Help them to be expressive and include some of the emotional content of the story in their retelling. Be sure to focus specifically on how the brain develops through maturation, as well as what role it plays in behavior. [115.15.b.3.C.i,ii; 115.16.b.3.C.i-iv]

If time allows, ask, "What examples of parts of the brain do you see in Marvin's Marvelous Brain?" and "Why do you think we sometimes need help from someone else in order to regulate our emotions and impulses?"

Discuss with students how brain development during childhood affects decision making. Explain how decisions are made and how the limbic system and the prefrontal cortex sometimes battle for decision making powers.

Invite students to discuss a time when they might have acted out of emotion, or without thinking? Or ask them if they have a baby brother or sister who might unexpectedly cry when they have to go to bed!

This is because the limbic system takes control and overrides the prefrontal cortex which is not sufficiently developed.

Explain to students that as we play imaginatively, work in teams, discuss other points of view, problem solve, and spend time learning, the prefrontal cortex gets stronger and can manage our limbic system more effectively. This means we can make decisions by weighing up points of view rather than on pure emotion (like a baby).

Ask students to think of things they have done this week that might have helped their prefrontal cortex to grow strong?

Remind students that the prefrontal cortex does not stop developing until we are 25 years old. [115.17.b.5.B.ii]

Updated Text: Screen: HW 0M11-3.5 - Hand Dribble and Pass (Protecting)

Demonstration: Dribble while Protecting

[116.15.b.1.D.i-vi; 116.16.b.1.D.i-vi; 116.16.b.4.B.iii; 116.16.b.4.C.ii]

Materials: 1 ball

Explain to students that, when dribbling with one hand, you can use your body and other arm to shield the ball from defenders and move your body in different directions and at different levels to keep the ball in your possession.

[116.16.b.4.C.ii]

Cue 1: Eyes up - Keep eyes forward

Cue 2: Dribble - Keep dribbling with control

Cue 3: Pivot - Pivot, or spin, on one foot to turn back toward defender

Cue 3: Shield - Use non-dribbling hand to create a shield for the ball. Use different levels and directions to continue to protect the ball. For example, a student may crouch low to protect the ball, pivot, bring the ball up high to draw the defender's body straight up, and then change directions quickly while dribbling at a low level again to keep the defender

off balance long enough to dribble around them. [116.16.b.4.B.iii]

Challenge students to change levels, speeds, and positions as they dribble, pivot, and roll to improve their defense.

Updated Text: Screen: HW 0M11-4.3 - Foot Dribble and Pass (Traveling)

Instructional Activity 1: Dribble Time

Materials: 1 ball per student

Have all students dribble the ball while walking in a designated area. While dribbling encourage and have students demonstrate these things:

Use your right/left foot

Use the inside/outside of your foot

Look for an open space and dribble there. Explain that open space is where you see a gap and can safely move there without others blocking or impeding your or the ball's movement. Closed space or closing space is area space on the playing area full of other players that will block or attempt to impede your or the ball's movement.

Music off - Trap

When the majority can trap, give them a countdown of five to get their ball trapped when the music turns off.

Alternatively, when the music turns off, freeze: students stop the ball in control (get silly here and have them stop the ball with various body parts...elbow, bottom, ear, and so on).

Ensure students can explain and demonstrate the fundamental components and strategies for this instructional activity. (cues for tap, follow and tap, and trap; keep the ball near the foot for control, alternate your eyes between the ball and looking ahead, find and move to an open space and avoiding closing spaces) [116.16.b.4.A.i,ii; 116.16.b.6.A.i,ii]

Updated Text: Screen: HW 1M11-4.4 - Track & Field (Walk and Run)

Instructional Activity 3: Choose Your Path

Materials: 2 cones; timer; whistle

Set up the 2 cones in diagonal corners of the learning area.

Have students line up behind one cone then invite them to run to the next cone and walk around the perimeter of the learning area back to the line. Release students from the line every 5-10 seconds to give them space. Students are allowed to safely pass another student in front of them.

Set a timer for 3 minutes and blow the whistle to freeze the students wherever they are so you can announce the next round's pathway.

Each round, students will run in a different pathway from cone to cone (and continue walking the perimeter of the learning area to get back to the running line).

Round 1: Straight pathway

Round 2: Curved pathway

Round 3: Zig-zag pathway

Round 4: Combined (Choose Your Own)

Repeat rounds as needed or, for a challenge, ask students to make two, then 3, then 4 direction changes in their run on a zig zag or curved pathway rounds.

Remind students to be body aware as they run and avoid other students.

This activity allows the teacher the opportunity to demonstrate and students the opportunity to learn and practice different pathways (straight, curved, zig zag). [116.12.b.4.B.i]

Original Text: New Content

Updated Text: Screen: HW 1M11-5.7 - Jump and Balance (Balance)

Instructional Activity 1: Single Leg Stances

Materials: balance beam or 2x4 or piece of wood or plywood (protect gym floors with blankets or towels); cushions
Stand with feet together and arms at the sides or reached outward.

Lift one leg (a) in front of the other "L" stand, (b) behind the other "airplane" stand, or (c) to the side "Y" stand while balancing on the other leg (repeat on other side).

Explain to students that cross lateralization is using one side of the body across the center line of the body, challenging the brain. Demonstrate cross lateralization in three ways and have students mirror the movements:

Beginner - Infinity: Stand on one leg with hand on hips or out to sides. With the other leg, cross the opposite foot in front of the body, drawing an infinity symbol with the toe on the floor. Repeat with the other leg.

Intermediate - Starfish: Stand on one leg with the opposite foot pointing out to the side of the body. Extend both arms up toward the standing leg side, drawing a diagonal line from the hands to the pointed toe. Lift the knee of the pointed toe across the body, twist the core, and bend elbows pulling arms across the other side of the body. Both elbows will be at approximately hip level on the lifted foot side. Repeat on the other side.

Advanced - Eagle: Stand on one leg crossing the other leg over the standing knee. Keep a slight bend in the standing leg for balance. If available, tuck the lifted foot behind the standing leg. Cross arms in front of body to give self a hug. If available, cross arms at elbows, wrapping forearms together to cross again at wrists, pressing hands together. (To support balance, push crossed elbows upwards as hips slightly squat downwards.) Repeat on other leg, switching the cross of the arms as well. [116.12.b.1.C.iv; 116.16.b.1.C.ii]

Use positions from Strike a Pose activity as well, varying in difficulty from basic to intermediate to advanced.

This instructional activity allows for students to learn how to listen respectfully and respond appropriately to corrective feedback. Instruct and model for students, giving them the opportunity to show with their body how to improve their performance. [116.12.b.15.A.i,ii; 116.13.b.15.A.i,ii; 116.14.b.15.A.i,ii]

Updated Text: Screen: HW 1M11-5.7 - Jump and Balance (Balance)

Instructional Activity 2: Strike A Pose

[116.12.b.4.B.ii,iii; 116.12.b.1.C.iii; 116.13.b.2.B.i-v]

Materials: none

Demonstrate the following balance poses or shapes for 5, 10, or 15 seconds each.

Have students mirror each pose or shape and practice bending, stretching, twisting, curling, and swaying while maintaining balance.

Help students understand how having a bigger base of support helps them be more stable and have better balance (spreading their fingers on the ground when on the hands).

Let the students know that their poses don't have to be perfect, but they should always try their best.

As needed, repeat on opposite side for each pose.

Play calm music while children are practicing.

Note: Each of the different poses or shapes are at different levels.

Star pose (High Level)

Stand up straight and spread feet wide apart.

Extend the arms sideways at shoulder height and parallel to floor, palms facing forward.

Dog pointer pose (Low Level)

Begin on all fours, hands under shoulders, knees under hips.

Stretch left arm and right leg out so that they are parallel to floor.

Repeat with opposite arm and leg.

Sitting on horse pose (Mid-Level)

Stand with feet wide, knees bent, and arms in front as if holding the reins.

Crab pose (Low Level)

Sit on floor with knees bent, feet flat, and toes pointing forward.

Hands under shoulders and flat on floor with fingers pointing forward.

Lift the bum so that the back and thighs are parallel to floor and arms are fully extended, head back looking up towards the sky.

Snowboarder (Mid-Level)

Similar to "sitting on horse", but arms are extended to the sides and parallel to ground.

Bend knees and lean to one side or the other.

Sailboat (Mid-Level)

Take a wide stance, one foot pointed outwards.

Bend at waist, tilt upper body, reach hand to gently rest on shin or foot that is pointing outwards.

Reach the other arm straight up.

Shark

Lay flat on tummy, lift up head and shoulders, hands together behind back.

This instructional activity allows for students to learn how to listen respectfully and respond appropriately to corrective

feedback. Instruct and model for students, giving them the opportunity to show with their body how to improve their performance. [116.12.b.15.A.i,ii; 116.13.b.15.A.i,ii; 116.14.b.15.A.i,ii]

Original Text: New Content

Updated Text: Screen: HW 2M11-1.1 - Moving My Body (Slideshow)

Fitness and Health: K - 5th grade

Invite students to study the images on the screen. Ask students what they notice about the images on the right side of the screen. What about the left side? (The images on the left show people participating in moderate to vigorous physical activities that improve their overall health and ability to do day-to-day activities. Handstands and balance moves increase flexibility and strength, while running and jumping up levels, improves cardiovascular health and strength. The images on the right show people participating in physical activities that improve their overall health while also isolating specific skills used in sports.) Emphasize that neither of these types is not better than the other, both improve overall health when done on a regular basis and students can use either to help them achieve their goals. Point out that health related fitness is measurable using a special test (PACER Test and Fitnessgram). These test will measure a student's aerobic capacity, muscular strength, endurance, flexibility and body composition to determine the students overall fitness.

[116.12.b.16.A.i]

Ask students to work with a partner to brainstorm and act out the correct techniques of several health-related fitness activities (activities that improve overall physical health through cardiovascular, strength, and/or flexibility training like running, strength-training, and yoga).

Ask students to work with a partner to brainstorm and act out the correct techniques of several skills-based fitness activities (skills specific to sports that also improve overall physical health like boxing a punching bag, drills for team sports, and swimming strokes).

To identify different physical activities for personal enjoyment play a game of charades and have the class guess what favorite physical activity each partner is acting out. Help students classify each activity as health-related or skill-related.

Invite students to explain the techniques for each fitness activity the partners acted out. [116.12.b.16.B.i; 116.15.b.8.C.i,ii; 116.16.b.8.C.i-iv; 116.17.b.8.C.i]

Components of Physical Activity: K - 5th grade

Game: Move My Body

First, define each word on screen. (frequency, intensity, endurance)

Explain how each term relates to physical activities:

Frequency means how often students get their hearts pumping with moderate to vigorous activity.

Endurance means building strength and fitness and fueling the body to perform in moderate to vigorous activities for an extended period of time.

Intensity means how hard the body is working. Explain the target is a defined time of Moderate to Vigorous Physical Activity (MVPA) where the heart rate is raised to a level of intensity. Moderate physical activity refers to activities equivalent in intensity to brisk walking or bicycling and vigorous physical activity produces large increases in breathing or heart rate, such as jogging, aerobic dance or bicycling uphill. [116.12.b.16.A.i]

Ask students to select a repeatable body movement like sit ups, jumping jacks, calf raises, and so on. Invite the students to perform their movement as you pretend to press a button to increase the frequency, turn a knob to increase the

intensity, and set a timer to demonstrate endurance/length of time. For example, start by announcing if this will be a short session (30 seconds).

Ask each student to perform their chosen move two times slowly, then countdown together five seconds, and perform the move again two times slowly and repeat.

Then, pretend to increase frequency and repeat the exercise, this time students will only count down from two before performing their movement slowly each time.

Next, pretend to reset the frequency and increase the intensity. Students will perform their movement as high or fast as they can two times (or, if they were performing jumping jacks, upgrade to a squat jump or other vigorous movement).

Then countdown together five seconds and repeat for 30 seconds.

Finally, pretend to reset the intensity but increase the length of the session to 90 seconds, explaining that this time they will need to demonstrate endurance to last the entire time.

Play around with the activities, perhaps ending with a session that lasts 90 seconds with five second countdown / rest intervals but alternating between low and high intensity movement intervals! [116.14.b.8.B.i,ii]

3rd - 5th grade:

Ask students to discuss with a partner how their body felt during the sessions that lasted longer and needed more endurance. Explain how students can further demonstrate frequency and intensity and improve their performance in endurance activities by moderating their pace. For example, if running a long distance, explain that students run hard in the curves of a track (or for a certain amount of time or number of steps) and then run at a comfortable pace and their body recovers in the straightaways (or for a certain amount of time or number of steps).

Invite students to explain in their own words the importance of frequency and intensity in endurance activities.

[116.15.b.8.B.i,ii]

4th - 5th grade: Practice and invited students to demonstrate this technique in the gymnasium: invite students to take laps around the gym, jogging on the sidelines and walking the goalines. Increase the intensity to sprinting the sidelines and jogging the goalines. [116.16.b.8.B.i,ii]

Updated Text: Screen: HW 0M01-2.3 - The Healthy Eating Song (Lyrics)

After listening to the song, demonstrate each movement and then help students achieve proper body positioning during the chorus. These moves allow students to practice and demonstrate the following:

Sequencing of two skills [116.12.b.1.C.v]

Practice the correct techniques for motor development skills following teacher direction [116.12.b.6.B.i]

Mirror and follow basic rhythm patterns.

This song is a good foundation for teaching the principles of following and mirroring rhythm patterns. Following is where the students copy an action you have done and mirroring is when they do the action with you at the same time.

Say the phrase "We love heal-thy food" and have the students echo the words back to you as loud as they can!

Say the phrase again, this time clapping on each word and syllable along with your speech. This is called a rhythm pattern. (X X XX X) Have students follow and then mirror.

Next, stomp the rhythm pattern and have the students follow, then mirror your movements.

Ask the students to show the rhythm pattern in other ways using their bodies or by working with a partner to reflect the rhythm

Have the students follow and reflect each other.

Slide the playhead on the Transport Bar to skip to 2 minutes 16 seconds into the song and practice the "We love heal-thy food" rhythm patterns along with this part of the song. [116.12.b.5.A.ii,iv]

Updated Text: Screen: HW 0M04-2.3 - Brush Your Teeth (Music Video)
Movement

After listening to the song, demonstrate each movement and then help students achieve proper body positioning during the chorus. These moves allow students to practice and demonstrate the following:

Demonstrate cross lateralization [116.12.b.1.C.iv]

Bending, stretching, twisting, and curling while maintaining balance [116.12.b.2.B.1-iv]

Ask students to spread out, so that each student can move freely without touching other students. Ask students to raise their arms by their sides and explain that the area within their reach is their personal space. Next, walk around the gym or classroom and explain that the walls of the room contain the space we all share, which is general space. While moving and dancing to the song, instruct students to stay in the general space while avoid each others' personal space. This allows students to differentiate between personal and general space while moving to simple rhythms and maintaining balance. [116.12.b.4.A.i,ii]

Mirror and follow teacher movement [116.12.b.5.A.i,iii]

Participate in moderate to vigorous physical activity on a regular basis [116.12.b.16.A.i; 116.13.b.16.A.i]

Updated Text: Screen: HW 1M11-4.2 - Track & Field (Hop and Gallop)

Image on screen has been updated.

Updated Text:

Demonstration: Hop

Practice proper form, foot patterns, and maintain balance while hopping. [116.12.b.1.A.i,vii; 116.12.b.1.A.xiii; 116.13.b.1.A.i,vi; 116.14.b.1.A.i,vi; 116.15.b.1.A.i]

Materials: none.

Cue 1: Arms Out - Use arms to keep balance

Cue 2: Stand On One Foot

Cue 3: Bring Other Foot Off the Floor - knee outwards and upwards towards the chin

Cue 4: Push Off - bend standing knee and push off

Cue 4: Land Softly - Land softly on their toes and bend knees and at hips when landing

Instructional Activity 1: Lava, Lava

Materials: a straight line on the floor using a skipping rope, masking tape, or an existing floor marking

One side of the line is lava, and the other side is the volcano.

All students start on the volcano side of the line.

Say "lava": everyone hops to the other side on one foot

Say "volcano": everyone hops with one foot back.

Continue like this for a short while, then mix up the instructions by saying "volcano" when the students are already on the volcano, and "lava" when the children are already on the lava. See how many students hop, and share a laugh with everyone!

Do not eliminate any students, simply ask the ones who hopped at the wrong time to go back to the correct side, and then continue playing.

Model and monitor locomotor skills demonstrated safely in both personal and general space. [116.14.b.4.A.i,iv]

Updated Text: Screen: HW 1M11-4.4 - Track & Field (Walk and Run)

Instructional Activity 3: Choose Your Path

Materials: 2 cones; timer; whistle

Set up the 2 cones in diagonal corners of the learning area.

Have students line up behind one cone then invite them to run to the next cone and walk around the perimeter of the learning area back to the line. Release students from the line every 5-10 seconds to give them space. Students are allowed to safely pass another student in front of them.

Set a timer for 3 minutes and blow the whistle to freeze the students wherever they are so you can announce the next round's pathway.

Each round, students will run in a different pathway from cone to cone (and continue walking the perimeter of the learning area to get back to the running line).

Round 1: Straight pathway

Round 2: Curved pathway

Round 3: Zig-zag pathway

Round 4: Combined (Choose Your Own)

Proclamation 2022 Report of New Content (11/04/2021)

Repeat rounds as needed or, for a challenge, ask students to make two, then 3, then 4 direction changes in their run on a zig zag or curved pathway rounds.

Remind students to be body aware as they run and avoid other students.

This activity allows the teacher the opportunity to demonstrate and students the opportunity to learn and practice different pathways (straight, curved, zig zag). [116.12.b.4.B.i]

Original Text: New Content

Updated Text: Screen: HW 1M11-5.7 - Jump and Balance (Balance)

Instructional Activity 1: Single Leg Stances

Materials: balance beam or 2x4 or piece of wood or plywood (protect gym floors with blankets or towels); cushions
Stand with feet together and arms at the sides or reached outward.

Lift one leg (a) in front of the other "L" stand, (b) behind the other "airplane" stand, or (c) to the side "Y" stand while balancing on the other leg (repeat on other side).

Explain to students that cross lateralization is using one side of the body across the center line of the body, challenging the brain. Demonstrate cross lateralization in three ways and have students mirror the movements:

Beginner - Infinity: Stand on one leg with hand on hips or out to sides. With the other leg, cross the opposite foot in front of the body, drawing an infinity symbol with the toe on the floor. Repeat with the other leg.

Intermediate - Starfish: Stand on one leg with the opposite foot pointing out to the side of the body. Extend both arms up toward the standing leg side, drawing a diagonal line from the hands to the pointed toe. Lift the knee of the pointed toe across the body, twist the core, and bend elbows pulling arms across the other side of the body. Both elbows will be at approximately hip level on the lifted foot side. Repeat on the other side.

Advanced - Eagle: Stand on one leg crossing the other leg over the standing knee. Keep a slight bend in the standing leg for balance. If available, tuck the lifted foot behind the standing leg. Cross arms in front of body to give self a hug. If available, cross arms at elbows, wrapping forearms together to cross again at wrists, pressing hands together. (To support balance, push crossed elbows upwards as hips slightly squat downwards.) Repeat on other leg, switching the cross of the arms as well. [116.12.b.1.C.iv; 116.16.b.1.C.ii]

Use positions from Strike a Pose activity as well, varying in difficulty from basic to intermediate to advanced.

This instructional activity allows for students to learn how to listen respectfully and respond appropriately to corrective feedback. Instruct and model for students, giving them the opportunity to show with their body how to improve their performance. [116.12.b.15.A.i,ii; 116.13.b.15.A.i,ii; 116.14.b.15.A.i,ii]

Updated Text: Screen: HW 1M11-5.7 - Jump and Balance (Balance)

Instructional Activity 2: Strike A Pose

[116.12.b.4.B.ii,iii; 116.12.b.1.C.iii; 116.13.b.2.B.i-v]

Materials: none

Demonstrate the following balance poses or shapes for 5, 10, or 15 seconds each.

Have students mirror each pose or shape and practice bending, stretching, twisting, curling, and swaying while maintaining balance.

Help students understand how having a bigger base of support helps them be more stable and have better balance (spreading their fingers on the ground when on the hands).

Let the students know that their poses don't have to be perfect, but they should always try their best.

As needed, repeat on opposite side for each pose.

Play calm music while children are practicing.

Note: Each of the different poses or shapes are at different levels.

Star pose (High Level)

Stand up straight and spread feet wide apart.

Extend the arms sideways at shoulder height and parallel to floor, palms facing forward.

Dog pointer pose (Low Level)

Begin on all fours, hands under shoulders, knees under hips.

Stretch left arm and right leg out so that they are parallel to floor.

Repeat with opposite arm and leg.

Sitting on horse pose (Mid-Level)

Stand with feet wide, knees bent, and arms in front as if holding the reins.

Crab pose (Low Level)

Sit on floor with knees bent, feet flat, and toes pointing forward.

Hands under shoulders and flat on floor with fingers pointing forward.

Lift the bum so that the back and thighs are parallel to floor and arms are fully extended, head back looking up towards the sky.

Snowboarder (Mid-Level)

Similar to "sitting on horse", but arms are extended to the sides and parallel to ground.

Bend knees and lean to one side or the other.

Sailboat (Mid-Level)

Take a wide stance, one foot pointed outwards.

Bend at waist, tilt upper body, reach hand to gently rest on shin or foot that is pointing outwards.

Reach the other arm straight up.

Shark

Lay flat on tummy, lift up head and shoulders, hands together behind back.

This instructional activity allows for students to learn how to listen respectfully and respond appropriately to corrective

feedback. Instruct and model for students, giving them the opportunity to show with their body how to improve their performance. [116.12.b.15.A.i,ii; 116.13.b.15.A.i,ii; 116.14.b.15.A.i,ii]

Ask students to work with a partner to brainstorm and act out the correct techniques of several health-related fitness activities (activities that improve overall physical health through cardiovascular, strength, and/or flexibility training like running, strength-training, and yoga).

Ask students to work with a partner to brainstorm and act out the correct techniques of several skills-based fitness activities (skills specific to sports that also improve overall physical health like boxing a punching bag, drills for team sports, and swimming strokes).

To identify different physical activities for personal enjoyment play a game of charades and have the class guess what favorite physical activity each partner is acting out. Help students classify each activity as health-related or skill-related.

Invite students to explain the techniques for each fitness activity the partners acted out. [116.12.b.16.B.i; 116.15.b.8.C.i,ii; 116.16.b.8.C.i-iv; 116.17.b.8.C.i]

Proclamation 2022 Report of New Content (11/04/2021)

Components of Physical Activity: K - 5th grade

Game: Move My Body

First, define each word on screen. (frequency, intensity, endurance)

Explain how each term relates to physical activities:

Frequency means how often students get their hearts pumping with moderate to vigorous activity.

Endurance means building strength and fitness and fueling the body to perform in moderate to vigorous activities for an extended period of time.

Intensity means how hard the body is working. Explain the target is a defined time of Moderate to Vigorous Physical Activity (MVPA) where the heart rate is raised to a level of intensity. Moderate physical activity refers to activities equivalent in intensity to brisk walking or bicycling and vigorous physical activity produces large increases in breathing or heart rate, such as jogging, aerobic dance or bicycling uphill. [116.12.b.16.A.i]

Ask students to select a repeatable body movement like sit ups, jumping jacks, calf raises, and so on. Invite the students to perform their movement as you pretend to press a button to increase the frequency, turn a knob to increase the intensity, and set a timer to demonstrate endurance/length of time. For example, start by announcing if this will be a short session (30 seconds).

Ask each student to perform their chosen move two times slowly, then countdown together five seconds, and perform the move again two times slowly and repeat.

Then, pretend to increase frequency and repeat the exercise, this time students will only count down from two before performing their movement slowly each time.

Next, pretend to reset the frequency and increase the intensity. Students will perform their movement as high or fast as they can two times (or, if they were performing jumping jacks, upgrade to a squat jump or other vigorous movement).

Then countdown together five seconds and repeat for 30 seconds.

Finally, pretend to reset the intensity but increase the length of the session to 90 seconds, explaining that this time they will need to demonstrate endurance to last the entire time.

Play around with the activities, perhaps ending with a session that lasts 90 seconds with five second countdown / rest intervals but alternating between low and high intensity movement intervals! [116.14.b.8.B.i,ii]

3rd - 5th grade:

Ask students to discuss with a partner how their body felt during the sessions that lasted longer and needed more endurance. Explain how students can further demonstrate frequency and intensity and improve their performance in endurance activities by moderating their pace. For example, if running a long distance, explain that students run hard in the curves of a track (or for a certain amount of time or number of steps) and then run at a comfortable pace and their body recovers in the straightaways (or for a certain amount of time or number of steps).

Invite students to explain in their own words the importance of frequency and intensity in endurance activities.

[116.15.b.8.B.i,ii]

4th - 5th grade: Practice and invited students to demonstrate this technique in the gymnasium: invite students to take laps around the gym, jogging on the sidelines and walking the goalines. Increase the intensity to sprinting the sidelines and jogging the goalines. [116.16.b.8.B.i,ii]

Updated Text: Instructional Guides - Song Lyrics and Choreography Guide

Updated on pages 42-43.

Healthy Me

Healthy me, healthy me x4

On "Healthy", arms reach straight up (either jumping or standing - stretching the body as long as possible)

On "me", thumbs pointing to self and sway

VERSE

Each movement is repeated twice in this verse, so K-1 can call-and-response with the teacher.

Eat good fruit and vegetables

R arm reach crossbody as if pulling open a fridge and then grabbing a fruit 1; curl R bicep and bring hand close to mouth to gesture eating the fruit 2;

L arm reach crossbody as if pulling open a fridge and then grabbing a veg from another other table 3; curl L bicep and bring hand close to mouth to gesture eating the veg 4 x2

Help me feel incredible

Depending on age/skill, spin can involve running in place, spinning on two feet, or spinning on one foot

Spin one full revolution with hands rubbing belly. x2

Better than sweets are healthy treats

Continuing rubbing belly, curl body forward, bending at torso to front 1-2; uncurl body at torso and lean slightly back 3-4. x2

Lots of water, lots of sleep

Lean to the R (with weight mostly on R foot) and curl bicep to gesture drinking from a cup 1-2; lean to the L (with weight mostly on L foot) and gesture sleeping with palms together and underneath head. x2

If I really wanna grow,

"The Twist" – stand on balls of feet and bend knees slightly; heels move side to side and hips swivel side to side, as well

Twist at lowest level, curled body in a crouch close to floor

I really wanna grow

Uncurl body slightly to twist at low – to mid-level

Really really wanna grow
Uncurl body more to twist at mid – to high-level and arms stretched high

I've got to be...
Jump in place and reach arms high
A Healthy me, healthy me. X4
On "Healthy", arms reach straight up and jump, stretching body as long as possible!
On "me", thumbs pointing to self X4

Eat good foods! Get up and move X4
On "eat good foods", standing, bouncing knees and pushing both hands forward on downbeats
On "get up and move", teacher choose age-appropriate locomotor, i.e. K: marching, 1: galloping, 2: running, 3: skipping and whether to move in place or in space X4

If I really wanna grow,
"The Twist" – stand on balls of feet and bend knees slightly; heels move side to side and hips swivel side to side, as well
Twist at lowest level, curled body in a crouch close to floor

I really wanna grow
Uncurl body slightly to twist at low – to mid-level

Really really wanna grow
Uncurl body more to twist at mid – to high-level and arms stretched high

I've got to be...
Jump in place and reach arms high
A Healthy me, healthy me X4
On "Healthy", arms reach straight up and jump, stretching body as long as possible!
On "me", thumbs pointing to self and sway

Updated Text: Screen: HW 0M11-3.5 - Hand Dribble and Pass (Protecting)

Demonstration: Dribble while Protecting

[116.15.b.1.D.i-vi; 116.16.b.1.D.i-vi; 116.16.b.4.B.iii; 116.16.b.4.C.ii]

Materials: 1 ball

Explain to students that, when dribbling with one hand, you can use your body and other arm to shield the ball from defenders and move your body in different directions and at different levels to keep the ball in your possession.

Proclamation 2022 Report of New Content (11/04/2021)

[116.16.b.4.C.ii]

Cue 1: Eyes up - Keep eyes forward

Cue 2: Dribble - Keep dribbling with control

Cue 3: Pivot - Pivot, or spin, on one foot to turn back toward defender

Cue 3: Shield - Use non-dribbling hand to create a shield for the ball. Use different levels and directions to continue to protect the ball. For example, a student may crouch low to protect the ball, pivot, bring the ball up high to draw the defender's body straight up, and then change directions quickly while dribbling at a low level again to keep the defender off balance long enough to dribble around them. [116.16.b.4.B.iii]

Challenge students to change levels, speeds, and positions as they dribble, pivot, and roll to improve their defense.

Updated Text: Screen: HW 0M11-4.3 - Foot Dribble and Pass (Traveling)

Instructional Activity 1: Dribble Time

Materials: 1 ball per student

Have all students dribble the ball while walking in a designated area. While dribbling encourage and have students demonstrate these things:

Use your right/left foot

Use the inside/outside of your foot

Look for an open space and dribble there. Explain that open space is where you see a gap and can safely move there without others blocking or impeding your or the ball's movement. Closed space or closing space is area space on the playing area full of other players that will block or attempt to impede your or the ball's movement.

Music off - Trap

When the majority can trap, give them a countdown of five to get their ball trapped when the music turns off.

Alternatively, when the music turns off, freeze: students stop the ball in control (get silly here and have them stop the ball with various body parts...elbow, bottom, ear, and so on).

Ensure students can explain and demonstrate the fundamental components and strategies for this instructional activity. (cues for tap, follow and tap, and trap; keep the ball near the foot for control, alternate your eyes between the ball and looking ahead, find and move to an open space and avoiding closing spaces) [116.16.b.4.A.i,ii; 116.16.b.6.A.i,ii]

Original Text: New Content

Updated Text: Screen: HW 1M11-5.7 - Jump and Balance (Balance)

Instructional Activity 1: Single Leg Stances

Materials: balance beam or 2x4 or piece of wood or plywood (protect gym floors with blankets or towels); cushions
Stand with feet together and arms at the sides or reached outward.

Lift one leg (a) in front of the other "L" stand, (b) behind the other "airplane" stand, or (c) to the side "Y" stand while balancing on the other leg (repeat on other side).

Explain to students that cross lateralization is using one side of the body across the center line of the body, challenging the brain. Demonstrate cross lateralization in three ways and have students mirror the movements:

Beginner - Infinity: Stand on one leg with hand on hips or out to sides. With the other leg, cross the opposite foot in front of the body, drawing an infinity symbol with the toe on the floor. Repeat with the other leg.

Intermediate - Starfish: Stand on one leg with the opposite foot pointing out to the side of the body. Extend both arms up toward the standing leg side, drawing a diagonal line from the hands to the pointed toe. Lift the knee of the pointed toe across the body, twist the core, and bend elbows pulling arms across the other side of the body. Both elbows will be at approximately hip level on the lifted foot side. Repeat on the other side.

Advanced - Eagle: Stand on one leg crossing the other leg over the standing knee. Keep a slight bend in the standing leg for balance. If available, tuck the lifted foot behind the standing leg. Cross arms in front of body to give self a hug. If available, cross arms at elbows, wrapping forearms together to cross again at wrists, pressing hands together. (To support balance, push crossed elbows upwards as hips slightly squat downwards.) Repeat on other leg, switching the cross of the arms as well. [116.12.b.1.C.iv; 116.16.b.1.C.ii]

Use positions from Strike a Pose activity as well, varying in difficulty from basic to intermediate to advanced.

This instructional activity allows for students to learn how to listen respectfully and respond appropriately to corrective feedback. Instruct and model for students, giving them the opportunity to show with their body how to improve their performance. [116.12.b.15.A.i,ii; 116.13.b.15.A.i,ii; 116.14.b.15.A.i,ii]

Updated Text: Screen: HW 5M05-4.4 - I-Messages Expanded

This screen activity reinforces how to manage multiple emotions at the same time and can be used to help discuss how brain development during childhood affects decision making.

Tell students: "An I-Message is a way to talk to someone else about how you are feeling."

Explain that they can use an I-Message when they have a conflict with someone.

Read through the script together. Toggle Example to On to see a completed script.

Select the Paginating Arrow. Allow students to choose or assign groups of three. In each group, there will be a speaker, an observer, and a listener.

Select Directions. Read the directions to students and check for understanding. Check to ensure that each group member knows their role.

Navigate to the next screen. To add background music to the discussion, select the Play button.

Invite group members to swap roles and repeat the activity as time allows.

Ask:

Scenario: You are upset with your friend because you heard that they were talking about you. Create an I-Message. If students feel comfortable sharing, take volunteers to read their I-Messages to the class. [115.15.b.3.H.i]

As we grow and develop, the limbic part of our brain which controls our emotions can overpower our prefrontal cortex. This can lead to emotional outbursts and sometimes decision making that is not thought through.

We can train our prefrontal cortex by talking, discussing, role-play, and education. This screen is a good way to train this part of our brain.

Select the example to continue, and talk through how the character might be feeling and the decisions she might encounter with a new baby in the house.

Ask students if they have had the same situation happen to them. Invite them to turn to a partner to share their experiences if they choose.

Tell students that discussing our emotions with trusted friends and family in the midst of a big change like this is a very effective way to improve our decision making skills. It allows our prefrontal cortex to remain in control rather than our emotions (limbic system) to take charge. [115.17.b.5.B.ii]

Updated Text: Toolbox - Marvin's Marvelous Brain (Story)

This screen activity invites students to make connections between basic brain anatomy and impulses.

The story introduces Samir, who is watching a video about parts of the brain and how they affect our impulses and choices.

Ask students about the key details in the story, especially as they relate to brain function.

Highlight key words in the story, such as brainstem, limbic system, amygdala, prefrontal cortex, impulse, and regulate.

[115.15.b.3.C.i,ii; 115.16.b.3.C.i-iv]

Invite students to point out in the text or recall from memory the words that suggested feelings of emotions.

Ask students about emotional content of the story:

Following the story, invite students to tell the story in their own words, or recount the key events. Help them to be expressive and include some of the emotional content of the story in their retelling. Be sure to focus specifically on how the brain develops through maturation, as well as what role it plays in behavior. [115.15.b.3.C.i,ii; 115.16.b.3.C.i-iv]

If time allows, ask, "What examples of parts of the brain do you see in Marvin's Marvelous Brain?" and "Why do you think we sometimes need help from someone else in order to regulate our emotions and impulses?"

Discuss with students how brain development during childhood affects decision making. Explain how decisions are made and how the limbic system and the prefrontal cortex sometimes battle for decision making powers.

Invite students to discuss a time when they might have acted out of emotion, or without thinking? Or ask them if they have a baby brother or sister who might unexpectedly cry when they have to go to bed!

This is because the limbic system takes control and overrides the prefrontal cortex which is not sufficiently developed.

Explain to students that as we play imaginatively, work in teams, discuss other points of view, problem solve, and spend time learning, the prefrontal cortex gets stronger and can manage our limbic system more effectively. This means we can make decisions by weighing up points of view rather than on pure emotion (like a baby).

Ask students to think of things they have done this week that might have helped their prefrontal cortex to grow strong?

Remind students that the prefrontal cortex does not stop developing until we are 25 years old. [115.17.b.5.B.ii]
